WARNING

- Installation MUST conform with local building codes or, in the absence of local codes, with the National Electrical Code NFPA70/ANSI C1-1993 or current edition and Canadian Electrical Code Part1 CSA C.22.1.
- The information contained in the manual is intended for use by a qualified service technician familiar with safety procedures and equipped with the proper tools and test instruments
- Installation or repairs made by unqualified persons can result in hazards to you and others.
- Failure to carefully read and follow all instructions in this manual can result in equipment malfunction, property damage, personal injury and/or death.

4. Installation Details

4.1 Wrench torque sheet for installation

Outside diameter		Torque	Additional tightening torque
mm	inch	N.cm	N.cm
Φ6.35	1/4	1500(153kgf.cm)	1600(163kgf.cm)
Φ9.52	3/8	2500(255kgf.cm)	2600(265kgf.cm)
Φ12.7	1/2	3500(357kgf.cm)	3600(367kgf.cm)

4.2 Connecting the cables

The power cord connection should be selected according to the following specifications sheet.

Unit	AWG
1 drive 2 type (18K outdoor unit)	14
1 drive 3 type (27K outdoor unit).	14
1 drive 4 type (36K outdoor unit)	12
1 drive 5 type (48K outdoor unit)	10

For indoor unit and outdoor unit connection line, 16AWG is ok for all.

4.3 Pipe length and the elevation

Maximum piping length and height difference

	1 drive 2	1 drive 3	1 drive 4	1 drive 5
Max. length for all rooms (m)	40 (131ft)	60 (197ft)	80 (262ft)	80 (262ft)
Max. length for one IU (m)	25 (82ft)	30 (98ft)	35 (115ft)	35 (115ft)
Max. height difference between IU and OU (m)	15 (49.2ft)	15 (49.2ft)	15 (49.2ft)	15 (49.2ft)
Max. height difference between IUs (m)	10 (33ft)	10 (33ft)	10 (33ft)	10 (33ft)

Additional refrigerant charge

		1 drive 2	1 drive 3	1 drive 4	1 drive 5
Pre-charge pipe length (m)		15 (49.2ft)	22.5 (73.8ft)	30 (98.4ft)	37.5 (123ft)
Additional refrigerant charge	g	15 x (length for all rooms - 15)	15 x (length for all rooms – 22.5)	15 x (length for all rooms - 30)	15 x (length for all rooms – 37.5)
	oz	0.161 x(length for all rooms – 49.2)	(0.161 x(length for all rooms – 73.8)	0.161x(length for all rooms – 98.4)	.0.161x (length for all rooms –123)

Caution:

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using the extension pipe, refer to the tables below.
- When refrigerant pipe diameter is different from that of the outdoor unit connector (18K indoor unit) an additional adapter is required.

Indoor unit			Extension pipe diameter (mm/inch)	
Model	Pipe diameter (mm/inch)			
9K	Liquid	6.35(1/4)	Liquid	6.35(1/4)
	Gas	9.52(3/8)	Gas	9.52(3/8)
12K 18K	Liquid	6.35(1/4)	Liquid	6.35(1/4)
	Gas	12.7(1/2)	Gas	12.7(1/2)
24K	Liquid	9.52 (3/8)	Liquid	9.52 (3/8)
	Gas	15.9(5/8)	Gas	15.9(5/8)
Outdoor unit union diameter (mm/inch)				
1 drive 2			Liquid	6.35(1/4) *2
			Gas	9.52(3/8) *2
1 drive 3			Liquid	6.35(1/4) *3
			Gas	9.52(3/8) *3
1 drive 4			Liquid	6.35(1/4) *4
			Gas	9.52(3/8) *3
				12.7(1/2) *1
1 drive 5			Liquid	6.35(1/4) *5
			Gas	9.52(3/8) *3
				12.7(1/2) *2

4.4 First-Time Installation

Air and moisture in the refrigerant system cause the following problems:

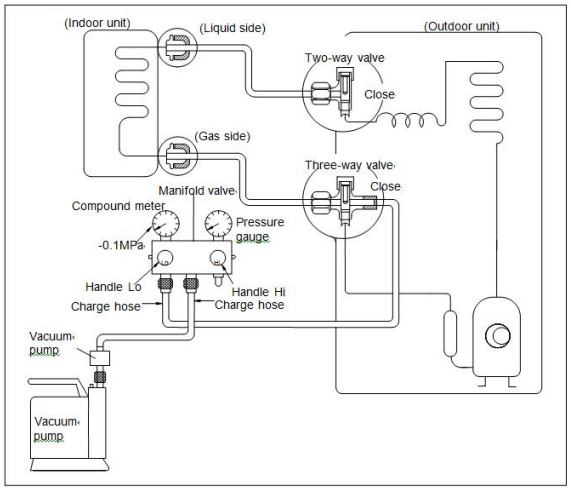
- Increases in system pressure
- Increases in operating current
- Decreases in cooling and heating efficiency
- Blocks in capillary tubing caused by moisture in the refrigerant circuit freezing
- Corrosion of parts in the refrigerant system caused by water

The indoor units and the pipes between indoor and outdoor units must be tested for leakages and evacuated to remove gas and moisture from the system.

Gas leak check with soap water:

Apply soap water or a liquid neutral detergent on the connections with a soft brush to check for leakage in the pipe connecting points. If bubbles emerge, the pipes are leaking.

1. Air Purging Using the Vacuum Pump

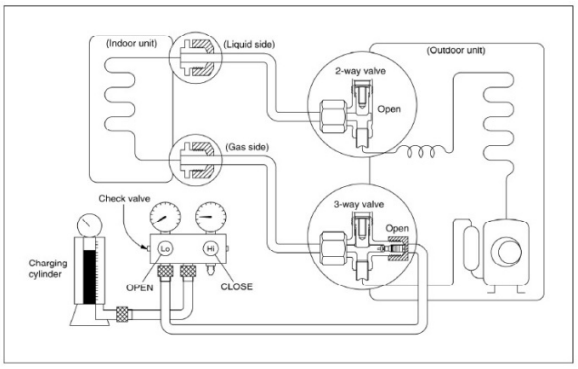


1. Completely tighten the flare nuts on the indoor and outdoor units. Confirm that both the2-way and 3-way valves are set to the closed position.
2. Connect the charge hose with the push pin of the Handle Lo to the 3-way valve gas service port.
3. Connect the charge hose of the Handle Hi to the vacuum pump.
4. Fully open the Handle Lo of the manifold valve.
5. Turn on the vacuum pump to begin evacuation.
6. Conduct a 30-minute evacuation. Check whether the compound meter indicates -0.1Mpa(14.5Psi). If the meter does not indicate -0.1Mpa(14.5Psi) after 30 minutes has elapsed, continue evacuation for 20 more minutes. If the pressure does not reach -0.1Mpa(14.5Psi) after 50 minutes has elapsed, check if there are any leaks.

Fully close the Handle Lo valve of the manifold valve and turn off the vacuum pump. After 5 minutes, confirm that the gauge needle is not moving.

7. Turn the flare nut on the 3-way valve45° counterclockwise for 6-7 seconds. Once gas begins to come out, tighten the flare nut. Make sure the pressure display on the pressure indicator is higher than atmospheric pressure. Then remove the charge hose from the 3-way valve.
8. Fully open the 2-wayand 3-way valves and securely tighten the cap on the 3-way valve.

2. Adding refrigerant if the pipe length exceeds chargeless pipe length



Procedure:

1) Connect the charge hose to the charging cylinder and open the 2-way and 3-way valves.
With the charge hose you disconnected from the vacuum pump, connect it to the valve at the bottom of the cylinder.

If the refrigerant is R410A, place the cylinder bottom-up to ensure liquid charging is possible.

2). Purge the air from the charge hose.
Open the valve at the bottom of the cylinder and press the check valve on the charge set (be careful of the liquid refrigerant).

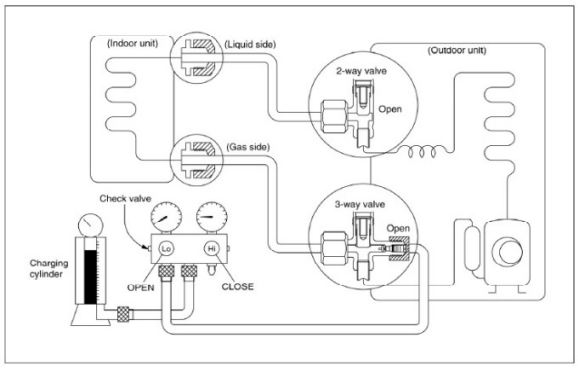
3) Place the charging cylinder onto the electronic scale and record the weight.

4) Turn on the air conditioner in cooling mode.

5) Open the valves (Low side) on the charge set. Charge the system with liquid refrigerant.
6).When the electronic scale displays the proper weight (refer to the table), disconnect the charge hose from the 3-way valve's service port immediately and turn off the air conditioner before disconnecting the hose.
7). Mount the valve stem caps and the service port
Use a torque wrench to tighten the service port cap to a torque of 18N.m(13.27 ft·lbs).

Be sure to check for gas leaks.

4.5 Adding Refrigerant after Long-Term System Operation



Procedure

1) Connect the charge hose to the 3-way service port and open the 2-way and 3-way valve.
Connect the charge hose to the valve at the bottom of the cylinder. If the refrigerant is R410A, place the cylinder bottom-up to ensure liquid charge.

2). Purge the air from the charge hose.
Open the valve at the bottom of the cylinder and press the check valve on the charge set to purge the air (be careful of the liquid refrigerant).

3) Place the charging cylinder onto the electronic scale and record the weight.

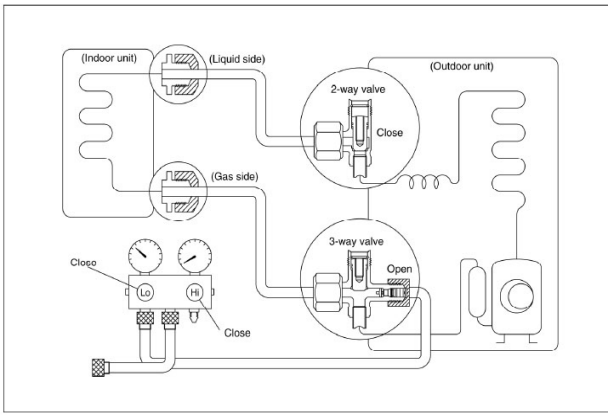
4) Turn on the air conditioner in cooling mode.

5) Open the valves (Low side)on the charge set and charge the system with liquid refrigerant.
6).When the electronic scale displays the proper weight (refer to the gauge and the pressure of the low side), disconnect the charge hose from the 3-way valve's service port immediately and turn off the air conditioner before disconnecting the hose.
7). Mount the valve stem caps and the service port.
Use torque wrench to tighten the service port cap to a torque of 18N.m(13.27 ft·lbs).

Be sure to check for gas leaks.

4.6 Procedure when servicing the indoor unit refrigeration circuit.

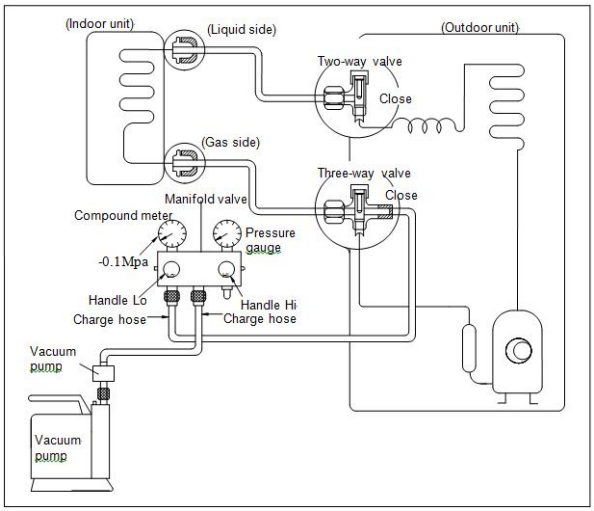
1. Collecting the refrigerant into the outdoor unit



Procedure

1). Confirm that both the 2-way and 3-way valves are set to the opened position
Remove the valve stem caps and confirm that the valve stems are in the opened position.
Be sure to use a hexagonal wrench to operate the valve stems.
2). Connect the charge hose with the push pin of handle lo to the 3-way valves gas service port.
3). Air purging of the charge hose.
Open the handle Lo valve of the manifold valve slightly to purge air from the charge hose for 5 seconds and then close it quickly.
4). Set the 2-way valve to the close position.
5). Operate the air conditioner at the cooling cycle and stop it when the gauge indicates 0.1MPa.
6). Set the 3-way valve to the closed position immediately
Do this quickly so that the gauge ends up indicating 0.3 to 0.5Mpa.
Disconnect the charge set, and tighten the 2-way and 3-way valve's stem nuts.
Use a torque wrench to tighten the 3-way valves service port cap to a torque of 18N.m.
Be sure to check for gas leakage.

2. Air purging with vacuum pump



1) Completely tighten the flare nuts of the indoor and outdoor units, confirm that both the 2-way and 3-way valves are set to the closed position.
2) Connect the charge hose with the push pin of handle lo to the 3-way valves gas service port.
3) Connect the charge hose of handle hi connection to the vacuum pump.
4) Fully open the handle Lo of the manifold valve.

5) Operate the vacuum pump to evacuate.
6) Make evacuation for 30 minutes and check whether the compound meter indicates -0.1Mpa. If the meter does not indicate -0.1Mpa after pumping 30 minutes, it should be pumped 20 minutes more. If the pressure can't achieve -0.1Mpa after pumping 50 minutes, please check if there are some leakage points.

Fully close the handle Lo valve of the manifold valve and stop the operation of the vacuum pump. Confirm that the gauge needle does not move (approximately 5 minutes after turning off the vacuum pump).

7) Turn the flare nut of the 3-way valves about 45° counterclockwise for 6 or 7seconds after the gas

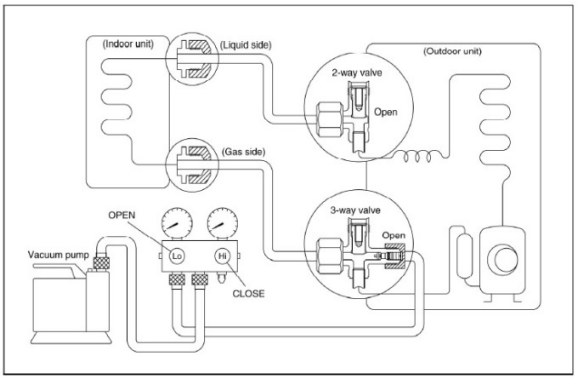
coming out, then tighten the flare nut again.
Make sure the pressure display in the

pressure indicator is a little higher than the atmosphere pressure. Then remove the charge hose from the 3 way valve.

8) Fully open the 2 way valve and 3 way valve and securely tighten the cap of the 3 way valve.

4.7 Evacuation after servicing the outdoor unit refrigeration circuit

1. Evacuation of the complete refrigeration circuit, Indoor and outdoor unit.

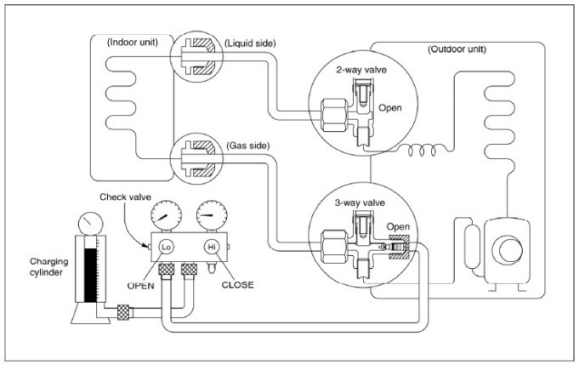


Procedure:

1). Confirm that both the 2-way and 3-way valves are set to the opened position.

2). Connect the vacuum pump to 3-way valve's service port.
3). Evacuation for approximately one hour. Confirm that the compound meter indicates -0.1Mpa (500 Microns / 29.9 in,hg).
4). Close the valve (Low side) on the charge set, turn off the vacuum pump, and confirm that the gauge needle does not move (approximately 5 minutes after turning off the vacuum pump).
5). Disconnect the charge hose from the vacuum pump.

2. Refrigerant charging



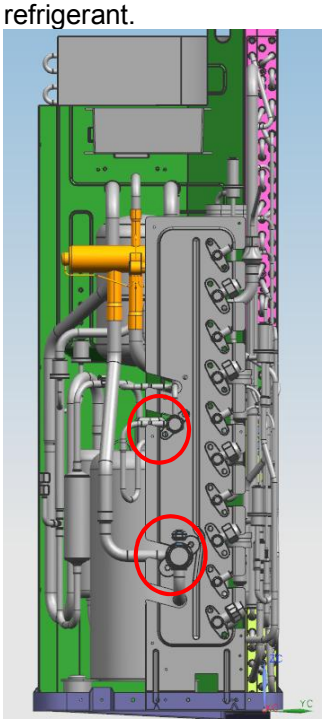
Procedure:

1). Connect the charge hose to the charging cylinder, open the 2-way valve and the 3-way valve.
Connect the charge hose which you disconnected from the vacuum pump to the valve at the bottom of the cylinder. If the refrigerant is R410A, make the cylinder bottom up to ensure liquid charge.
2). Purge the air from the charge hose
Open the valve at the bottom of the cylinder and press the check valve on the charge set to purge the air (be careful of the liquid refrigerant).

3) Put the charging cylinder onto the electronic scale and record the weight.
4). Open the valves (Low side) on the charge set and charge the system with liquid refrigerant
If the system cannot be charge with the specified amount of refrigerant, or can be charged with a little at a time (approximately 150g each time) , operating the air conditioner in the cooling cycle; however, one time is not sufficient, wait approximately 1 minute and then repeat the procedure.
5).When the electronic scale displays the proper weight, disconnect the charge hose from the 3-way valve's service port immediately
If the system has been charged with liquid refrigerant while operating the air conditioner, turn off the air conditioner before disconnecting the hose.
6). Mounted the valve stem caps and the service port. Use torque wrench to tighten the service port cap to a torque of 18N·m (13.27 ft·lbs).
Always leak check after servicing the

refrigerant system.

For MCH3U-27PHH2/MCH4U-36PHH2/MCH5U-48PHH2
There are one low-pressure centralized valve and one high-pressure centralized valve, it will be more time saving when vacuum and recycle refrigerant. But refer to the previous instruction when vacuum and recycle refrigerant.



6. Electronic Function

6.1 Abbreviation

T1: Indoor ambient temperature

T2: Middle indoor heat exchanger coil temperature

T2B: Indoor heat exchanger exhaust coil temperature (located on the outdoor unit)

T3: Outdoor heat exchanger pipe temperature

T4: Outdoor ambient temperature

T5: Compressor discharge temperature

6.2 Electric Control Working Environment.

6.2.1 Input voltage: 230V.

6.2.2 Input power frequency: 60Hz.

6.2.3 Indoor fan standard working amp.: <1A

6.2.4 Outdoor fan standard working amp.: <1.5A.

6.2.5 Four-way valve standard amp.: <1A.

6.3 Main Protection

6.3.1 Compressor Restart Delay

---- The compressor takes 1 minute to start up the first time. Further restarts take 3 minutes.

6.3.2 Temperature Protection of Compressor Discharge.

When the discharge temperature of the compressor rises, the running frequency is limited according to the following rules:

----If 105℃ (221 ℉)≦T5<110℃ (230 ℉), maintain the current frequency.

----If the temperature increase and T5≧110℃ (230 ℉), decrease the frequency to a lower level every 2 minutes till to F1.

---If T5≧115℃ (239 ℉) for 10 seconds, the compressor stops and then restart untill T5<90℃ (194 ℉).

6.3.3 Fan Speed Malfunction

---- If outdoor fan speed is lower than 100RPM or higher than 2400RPM for 60 seconds or more, the unit stops and LED displays E8 failure code.

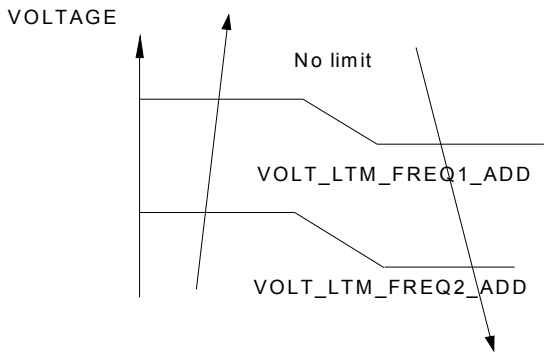
6.3.4 Inverter Module Protection.

---- The inverter protection module ensures that faults related to current, voltage, or temperature does not damage the inverter.

If these protections are triggered, the A/C unit stops and the LED displays the failure code.

The unit restarts 3 minutes after the protection mechanism has turned off.

6.3.5 Low Voltage Protection

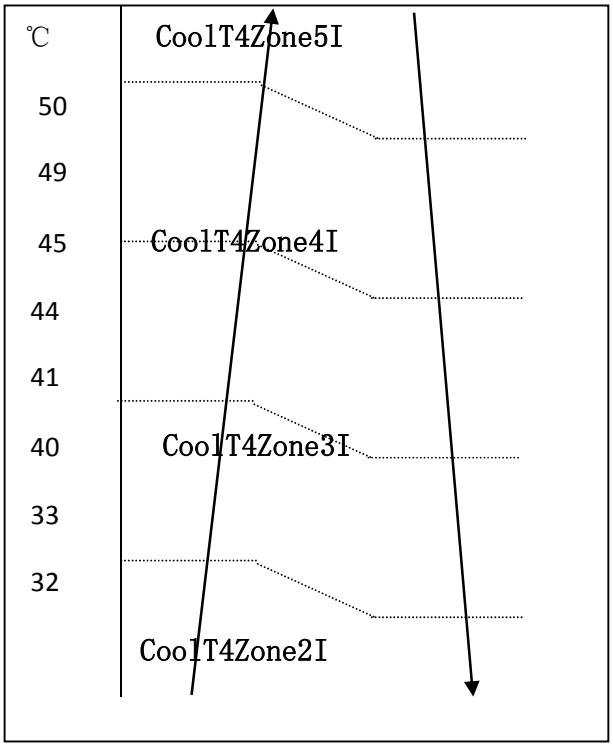


Note: If low voltage protection triggers and voltage is not restored to normal within 3 minutes, the protection remains active even after a machine restart.

6.3.6 Compressor Current Limit Protection

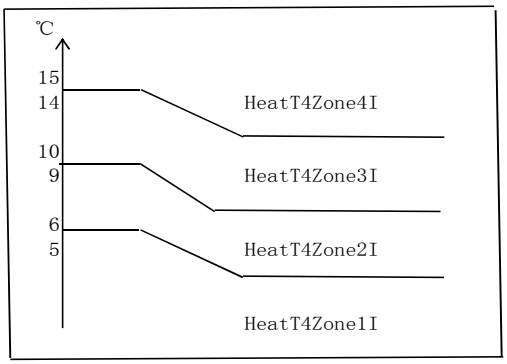
The temperature interval for the current limit is the same as the range of the T4 frequency limit.

Cooling mode:



CoolReturnI	The difference between current limit and shutdown current
CoolT4Zone5I	Cooling T4≥50℃ current limit value
CoolT4Zone4I	Cooling 49＞T4≥45℃ current limit value
CoolT4Zone3I	Cooling 44＞T4≥41℃ current limit value
CoolT4Zone2I	Cooling 40 ＞T4≥33℃ current limit value
CoolT4Zone1I	Cooling 32＞T4℃current limit value
CoolStopI	Cooling stop protection current value

Heating mode:

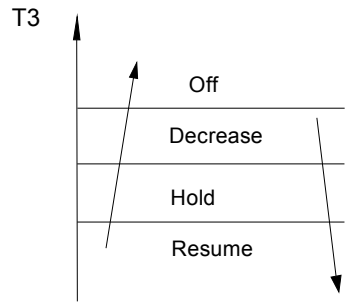


HeatReturnI	The difference between current limit and shutdown current
HeatT4Zone4I	Heating T4≥15℃current limit value
HeatT4Zone3I	Heating 14＞T4≥10℃ current limit value
HeatT4Zone2I	Heating 9＞T4≥6℃ current limit value
HeatT4Zone1I	Heating 5＞T4 current limit value
HeatStopI	Heating stop protection current value

6.3.7 Indoor / Outdoor Units Communication Protection

If the indoor units do not receive the feedback signal from the outdoor units for 2 consecutive minutes, the unit stops. The unit displays the failure code.

6.3.8 High Condenser Coil Temp. Protection



6.3.9 Outdoor Unit Anti-Freezing Protection

When T2<4℃ for 250seconds or T2<0℃, the indoor unit capacity demand is zero and resumes normal operation when T2>8℃ and the protection time is no less than 3 minutes.

6.3.10 Oil Return

Rules for Operation

1. If the compressor frequency continues to be lower than the frequency set for setting time, the unit raises the frequency to the frequency set for setting time and then resumes with the former frequency.
2. The EXV continues at 300p while indoor units maintain their operation.

If the outdoor ambient temperature is higher than the set frequency during oil return, the unit stops the oil return process.

6.3.11 Low Outdoor Ambient Temperature Protection

When the compressor is off and T4 is lower than -35℃ for 10 seconds, the unit stops and displays “LP.”

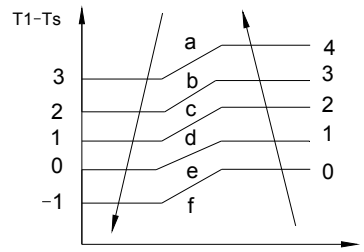
When the compressor is on and T4 remains lower than -40℃ for 10 seconds, the unit stops and displays “LP.”

When T4 is no lower than -32℃ for 10 seconds, the unit exits protection.

6.4 Control and Functions

6.4.1 Capacity Request Calculation

Cooling Mode:



Capacity area	a	b	c	d	e	f
Norm code (N)	3	2	1.5	1	0.5	0

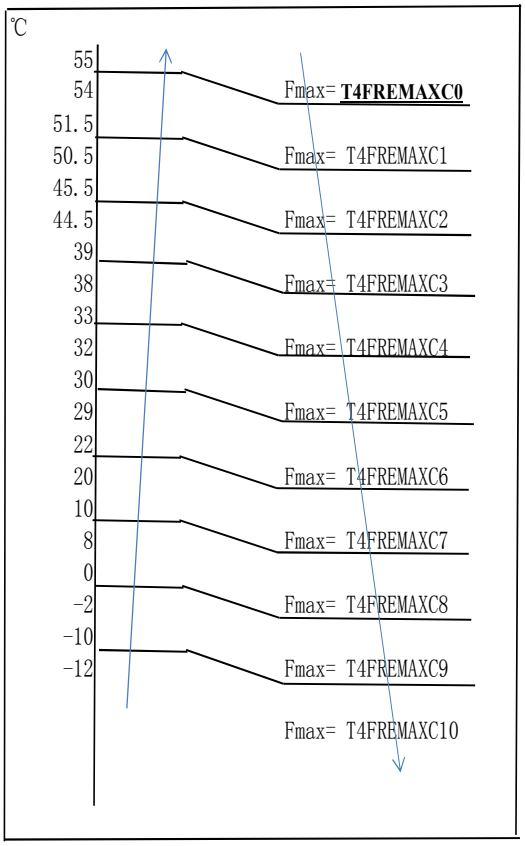
Model	9K	12K	18K	24K
HP	1.0	1.2	1.5	2.5

Note: The final result is an integer.

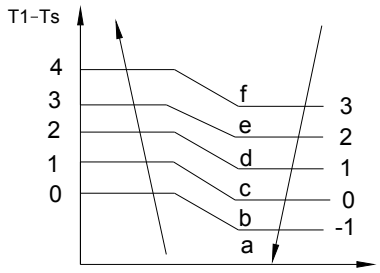
Use the following table and final capacity request to confirm the operating frequency.

Frequency (Hz)	0	COOL_F1	COOL_F2	……	COOL_F24	COOL_F25
Amendatory capacity demand.	0	1	2	……	24	25

The maximum running frequency is adjusted according to the outdoor ambient temperature



Heating Mode



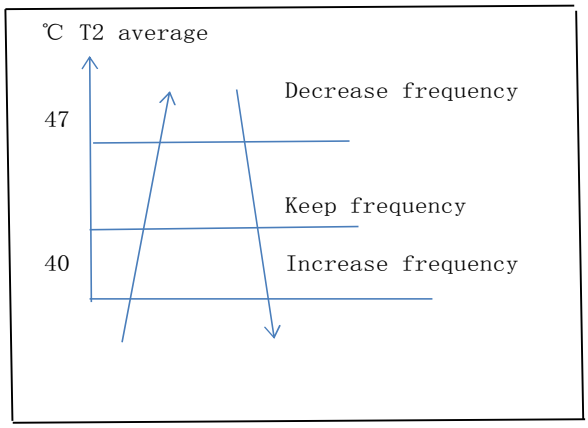
Capacity area	a	b	c	d	e	f
Norm code (N)	3	2	1.5	1	0.5	0

Model	9K	12K	18K	24K
HP	1.0	1.2	1.5	2.5

Note: The final result is an integer.

Then modify it according to a T2 average (correction):

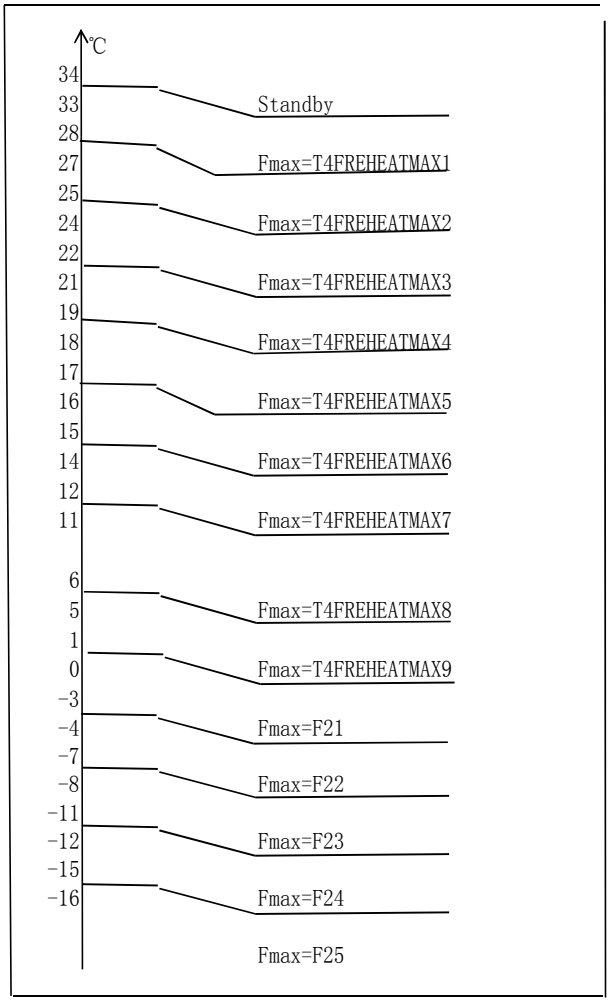
Note:Average value of T2：Sum T2 value of all indoor units)/ (indoor units number



Use the following table and final capacity request to confirm the operating frequency.

Frequency (Hz)	0	HEAT_F1	HEAT_F2	…	HEAT_F24	HEAT_F25
Amendatory capacity demand.	0	1	2	…	24	25

The maximum running frequency is adjusted according to the outdoor ambient temperature



6.4.2 Defrosting Control

Conditions for Defrosting:

After the compressor starts and enters normal operation, mark the minimum value of T3 from the 10th to 15th minute as T30.

If any one of the following conditions is satisfied, the unit enters defrosting mode:

1) If the compressor's cumulative running time reaches 29 minutes and T3< TCDI1 and T3＋T30SUBT3ONE≦T30.

2) If the compressor cumulative running time reaches 35 minutes and T3< TCDI2 and T3＋T30SUBT3TWO≦T30.

3) If the compressor cumulative running time reaches 40 minutes and T3< -24C for 3 minutes.

4) If the compressor cumulative running time reaches 120 minutes and T3<-15℃.

Defrost Stop Conditions

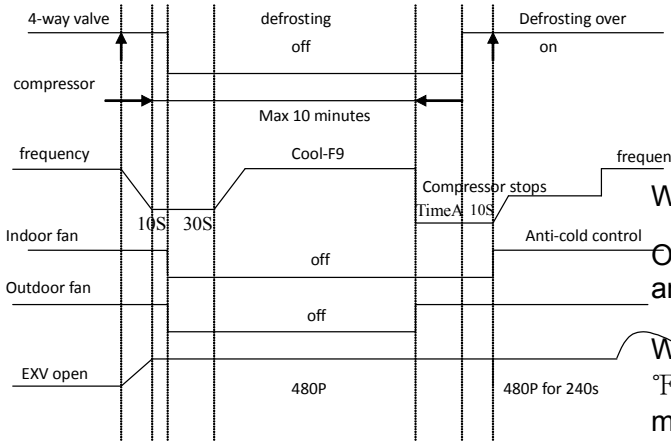
If any one of the following conditions is satisfied, defrosting ends and the unit returns to normal heating mode:

----T3 rises above than TCDE1℃.

----T3 remains at TCDE2℃ or above for 80 seconds.

----The machine runs for 10 consecutive minutes in defrosting mode.

Defrosting Action：



Condition of ending defrosting:

If any one of following items is satisfied, defrosting will stop and the machine will turn to normal heating mode.

① T3 > TempQuitDefrost_ADD ℃;.

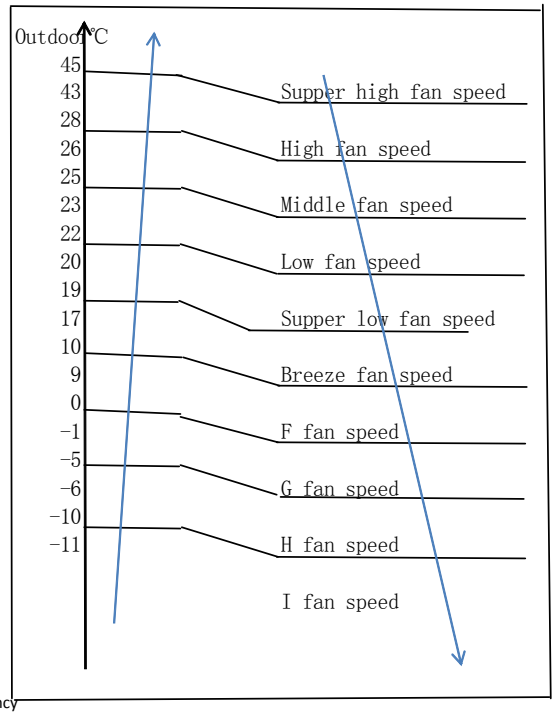
② The defrosting time achieves 10min.

③ Turn to other modes or off.

6.4.3 Outdoor Fan Control

6.4.3.1 Cooling Mode

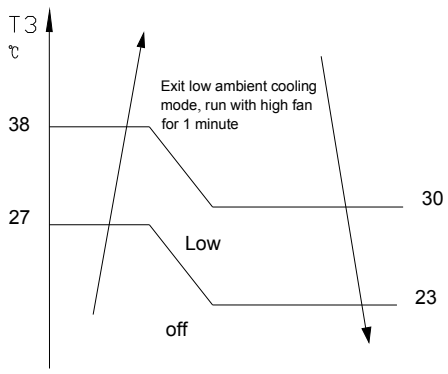
Under normal operating conditions, the system chooses the running fan speed according to the ambient temperature:

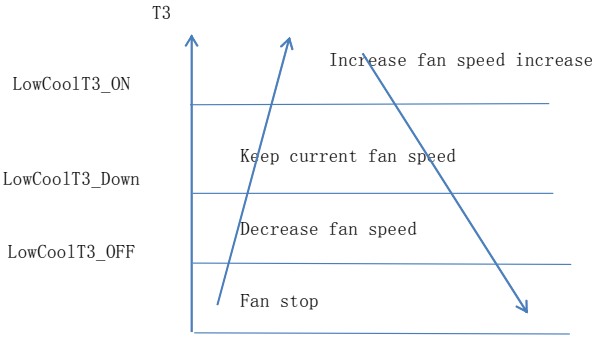


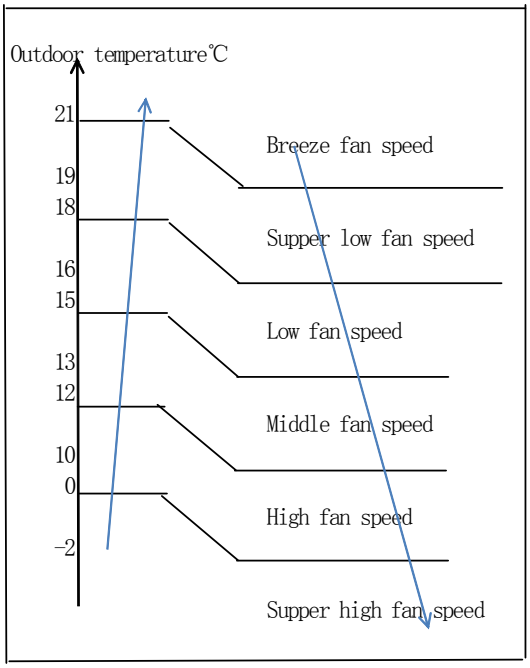
When low ambient cooling is in effect::

Outdoor fan speed control logic (low ambient cooling)

When T4 <15 ℃ (59 ℉) and T3 < 30 ℃ (86 ℉), the unit enters into low ambient cooling mode. The outdoor fan chooses a speed according to T3.
When T3≥38 ℃ (100.4 ℉) or when T4≥20 ℃ (68 ℉), the outdoor fan chooses a speed according to T4 again.







6.4.3.2 Heating Mode

Under normal operating conditions, the system chooses a running fan speed according to ambient temperature:

6.4.4 Electronic Expansion Valve (EXV) Control

1. EXV remains fully closed while the device is powering up. EXV then remains on standby with 350P open. It opens to the target angle after the compressor starts.
2. EXV closes with -160P when the compressor stops. Then it remains on standby with 350P open. It opens to the target angle after the compressor starts.
3. The action priority for the EXVs is A-B-C-D-E.
4. The compressor and outdoor fan commence operation only after EXV initializes.

6.4.4.1 Cooling Mode

The initial open angle of the EXV depends on the size of the indoor model. The adjustment range is 100-400p.

When the unit has been running for 3 minutes, the outdoor receives indoor units' capacity demand and T2B information and then calculates their average. After comparing each indoor's T2B with the

average, the outdoor gives the following modification commands:

---- If the T2B＞average, the relevant valve needs to open 16p more

---- If the T2B= average, the relevant valve's open range remains as is

---- If the T2B＜average, the relevant valve needs to close 16p more

This modification is carried out every 2 minutes.

6.4.4.2 Heating Mode

The initial open angle of the EXV depends on the size of the indoor model. The adjustment range is 150-350p.

When the unit has been running for 3 minutes, the outdoor unit receives the indoor units' indoor units' capacity demand and T2 information and then calculates their average.

After comparing each indoor unit's T2 with the average, the outdoor gives the following modification commands:

----If the T2＞average+2, the relevant valve needs to close 16p more

---- If average+2≥the T2≥ average-2, the relevant valve's open range remains as is

----If the T2＜average-2, the relevant valve needs to open 16p more

This modification is carried out every 2 minutes.

6.4.5 Four-Way Valve Control

In heating mode, a four-way valve is opened.

In defrosting, a four-way valve operates according to the current defrosting action.

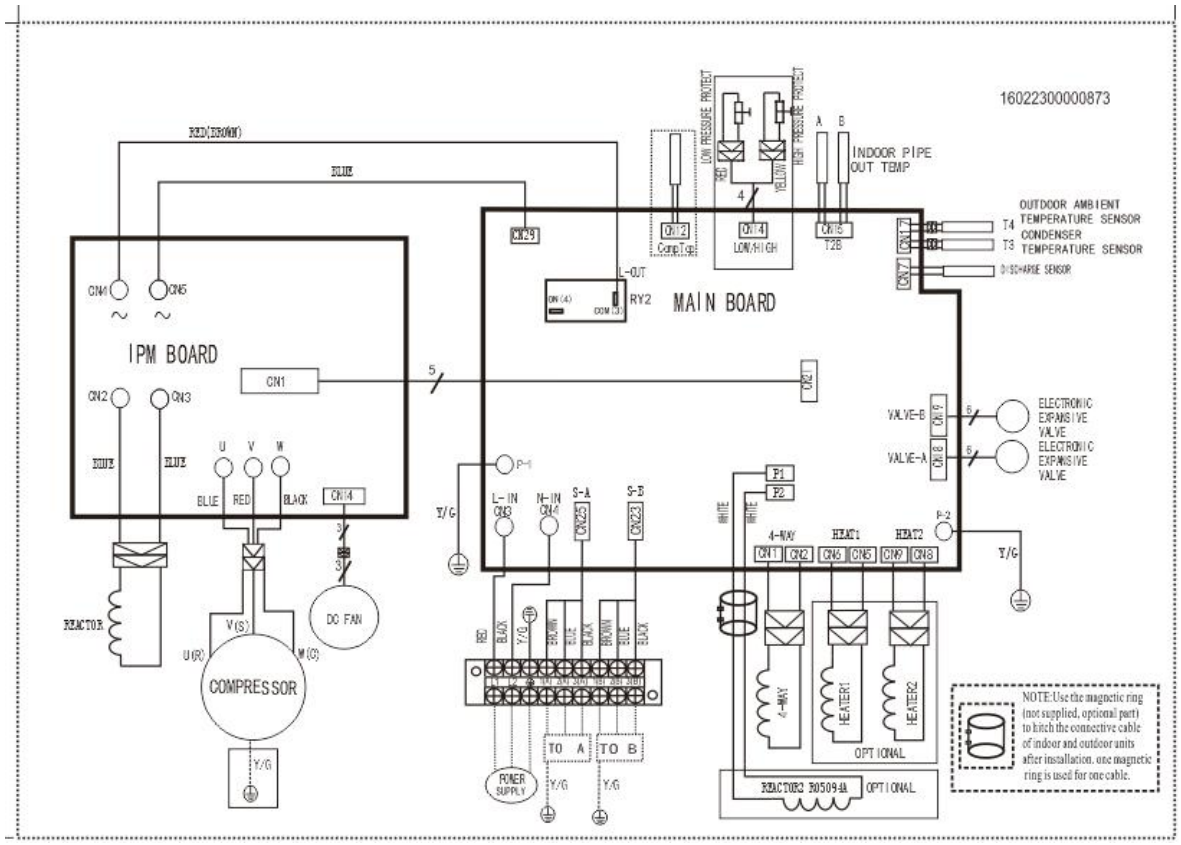
In other modes, a four-way valve is closed.

When the unit is switched from heating to other modes, the four-way valve turns off after the compressor has been off for 2 consecutive minutes.

Failure or protection (excluding discharge temperature protection and high/low pressure protection) causes the four-way valve to immediately shut down.

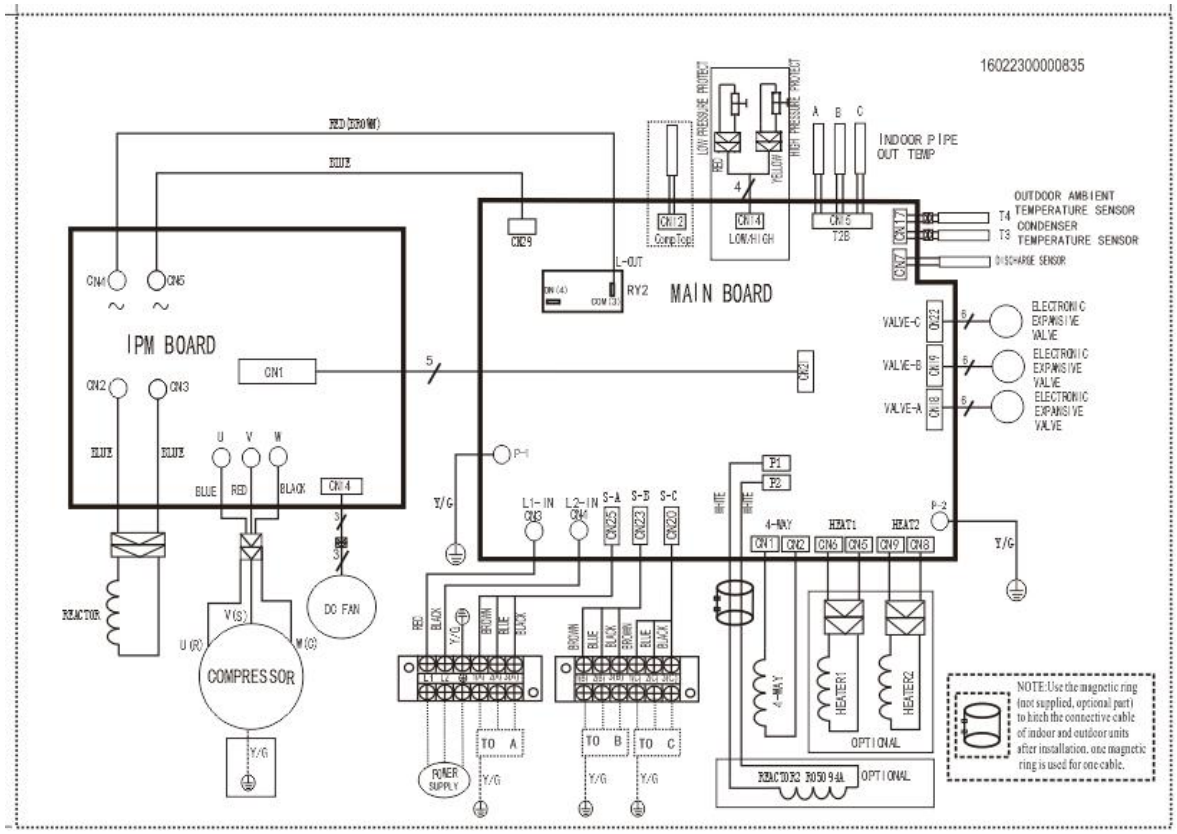
7. Wiring Diagrams

7.1 Wiring diagram of 1 drive 2 outdoor
MCH2U-18PHH2



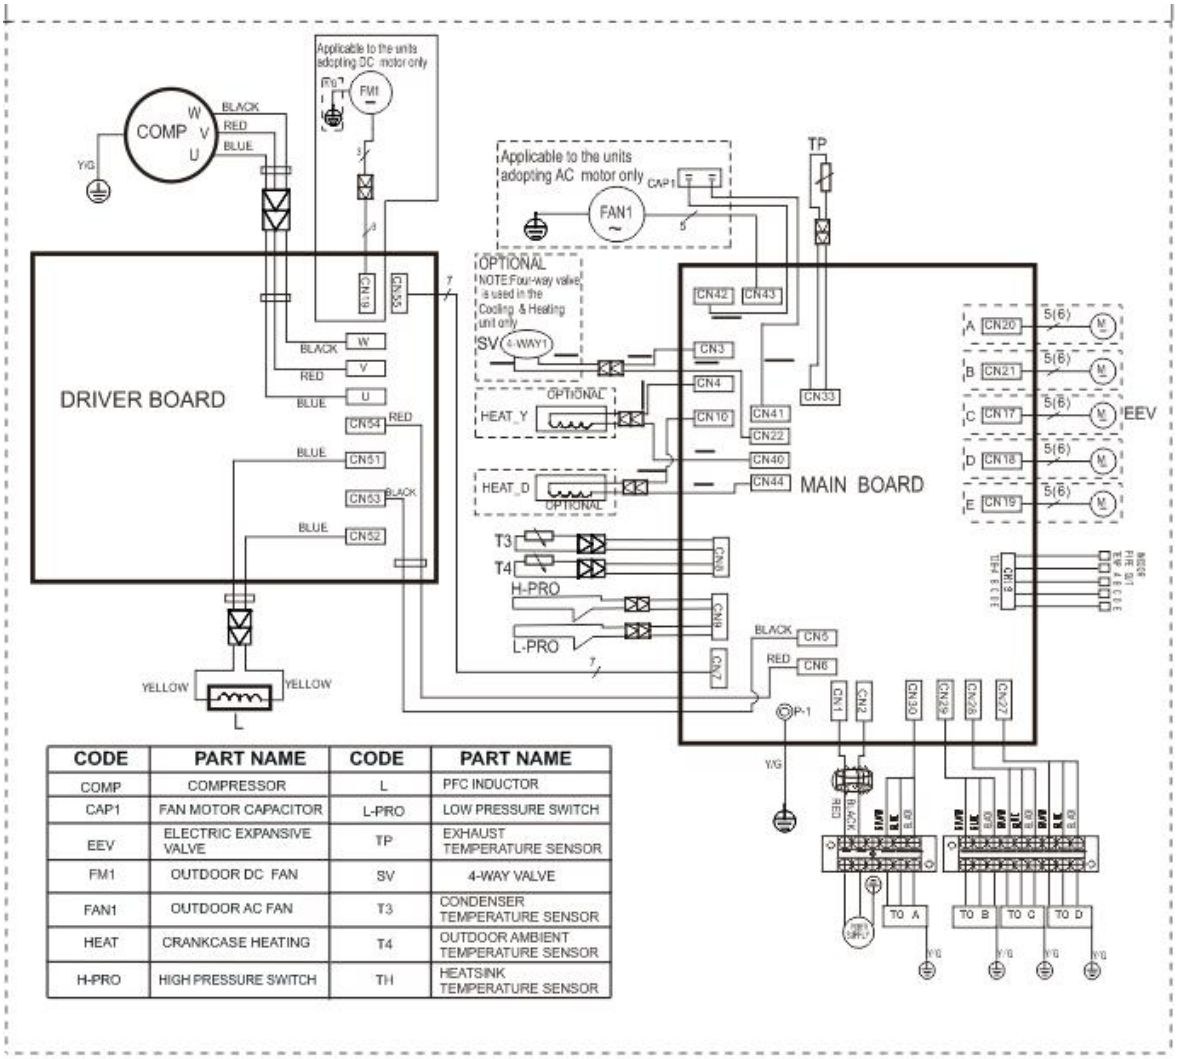
7.2 Wiring diagram of 1 drive 3 outdoor

MCH3U-27PHH2



7.3 Wiring diagram of 1 drive 4 outdoor

MCH4U-36PHH2



CODE	PART NAME	CODE	PART NAME
COMP	COMPRESSOR	L	PFC INDUCTOR
CAP1	FAN MOTOR CAPACITOR	L-PRO	LOW PRESSURE SWITCH
EEV	ELECTRIC EXPANSIVE VALVE	TP	EXHAUST TEMPERATURE SENSOR
FM1	OUTDOOR DC FAN	SV	4-WAY VALVE
FAN1	OUTDOOR AC FAN	T3	CONDENSER TEMPERATURE SENSOR
HEAT	CRANKCASE HEATING	T4	OUTDOOR AMBIENT TEMPERATURE SENSOR
H-PRO	HIGH PRESSURE SWITCH	TH	HEATSINK TEMPERATURE SENSOR

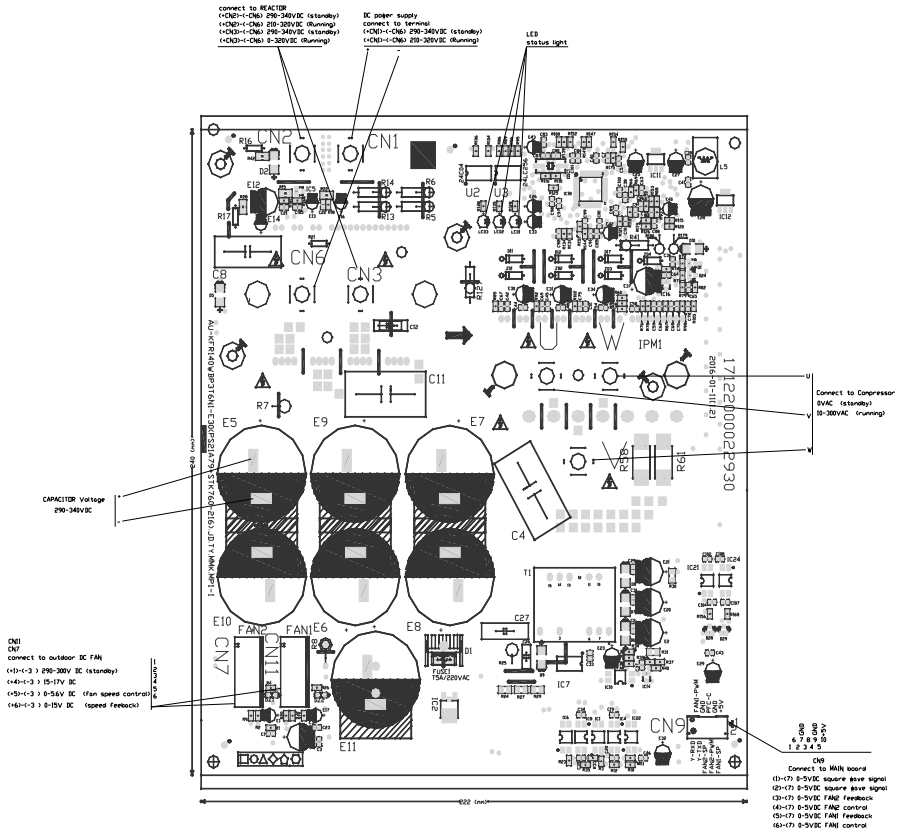
IPM board of MCH5U-48PHH2

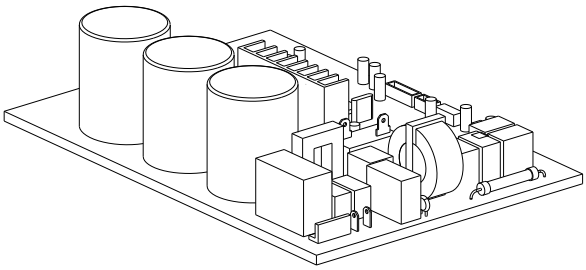


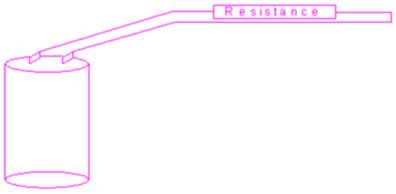
8. Troubleshooting

8.1Safety

Electricity is stored in capacitors, even when the power supply is shut off. Do not forget to discharge the electricity in the capacitors.

The value of resistance is about 1500 ohm to 2000 ohm





Electrolytic Capacitors

(HIGH VOLTAGE! CAUTION!)

Bulb (25-40W)

The voltage in P3 and P4 in outdoor PCB is high voltage about 310V

The voltage in P5 and P6 in outdoor PCB is high voltage about 310V

8.2 Indoor Unit Error Display

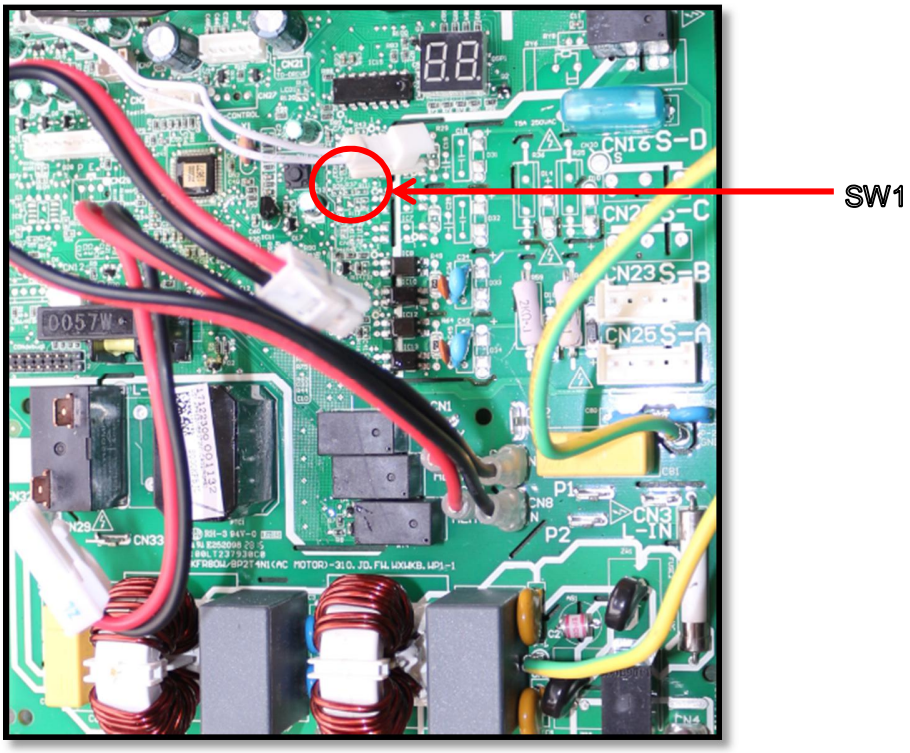
8.3 Outdoor Unit Display

8.3.1 Outdoor Unit Point Check Function

A check switch is included on the outdoor PCB.

Push SW1 to check the unit's status while running. The digital display shows the following codes each time the SW1 is pushed.



Number of Presses	Display	Remark
0	Normal display	Displays running frequency, running state, or malfunction code
1	Quantity of indoor units with working connection	Actual data Display: 1 → Number of indoor unit: 1 Display: 2 → Number of indoor unit: 2 Display: 3 → Number of indoor unit: 3 Display: 4 → Number of indoor unit: 4
2	Outdoor unit running mode code	Off: 0,Fan only: 1, Cooling: 2, Heating: 3, Forced cooling: 4. Forced defrost:A
3	Indoor unit A capacity	The capacity unit is horse power. If the indoor unit is not connected, the digital display shows the following: "——" (9K:1HP,12K:1.2HP,18K:1.5HP)
4	Indoor unit B capacity	
5	Indoor unit C capacity	
6	Indoor unit D capacity	
7	Indoor unit E capacity	
8	Indoor unit A capacity demand code	Norm code*HP (9K: 1HP,12K: 1.2HP,18K: 1.5HP)
9	Indoor unit B capacity demand code	
10	Indoor unit C capacity demand code	

11	Indoor unit D capacity demand code			
12	Indoor unit E capacity demand code			
13	Outdoor unit amendatory capacity demand code			
14	The frequency corresponding to the total indoor units' amendatory capacity demand			
15	The frequency after the frequency limit			
16	The frequency sending to compressor control chip			
17	Indoor unit A evaporator outlet temperature (T_{2B}A)	If the temperature is lower than -9 ℃, the digital display shows "-9." If the temperature is higher than 70 ℃, the digital display shows "70." If the indoor unit is not connected, the digital display shows: "——"		
18	Indoor unit B evaporator outlet temperature (T_{2B}B)			
19	Indoor unit C evaporator outlet temperature (T_{2B}C)			
20	Indoor unit D evaporator outlet temperature (T_{2B}D)			
21	Indoor unit E evaporator outlet temperature (T_{2B}E)			
22	Indoor unit A room temperature (T_1A)	If the temperature is lower than 0 ℃, the digital display shows "0." If the temperature is higher than 50 ℃, the digital display shows "50." If the indoor unit is not connected, the digital display shows: "——"		
23	Indoor unit B room temperature (T_1B)			
24	Indoor unit C room temperature (T_1C)			
25	Indoor unit D room temperature (T_1D)			
26	Indoor unit E room temperature (T_1E)			
27	Indoor unit A evaporator temperature (T_2A)	If the temperature is lower than -9 ℃, the digital display shows "-9." If the temperature is higher than 70 ℃, the digital display shows "70." If the indoor unit is not connected, the digital display shows: "——"		
28	Indoor unit B evaporator temperature (T_2B)			
29	Indoor unit C evaporator temperature (T_2C)			
30	Indoor unit D evaporator temperature (T_2D)			
31	Indoor unit E evaporator temperature (T_2E)			
32	Condenser pipe temperature (T3)			
33	Outdoor ambient temperature (T4)			
34	Compressor discharge temperature (TP)	The display value is between 30–129 ℃. If the temperature is lower than 30 ℃, the digital display shows "30." If the temperature is higher than 99 ℃, the digital display shows single and double digits. For example, if the digital display shows "0.5", the compressor discharge temperature is 105 ℃.		
35	AD value of current	The display value is a hex number. For example, the digital display tube shows "Cd", it means AD value is 205.		
36	AD value of voltage			
37	EXV open angle for A indoor unit	Actual data/4. If the value is higher than 99, the digital display shows single and double digits. For example, if the digital display shows "2.0", the EXV open angle is 120×4=480p.		
38	EXV open angle for B indoor unit			
39	EXV open angle for C indoor unit			
40	EXV open angle for D indoor unit			
41	EXV open angle for E indoor unit			
42	Frequency limit symbol	Bit7	Frequency limit caused by IGBT radiator	The display value is a hexidecimal number. For example, the digital display show 2A, then
		Bit6	Frequency limit caused by PFC	
		Bit5	Frequency limit caused by T4.	
		Bit4	Frequency limit caused by T2.	
		Bit3	Frequency limit caused by T3.	

		Bit2	Frequency limit caused by T5.	Bit5=1, Bit3=1, and Bit1=1. This means that a frequency limit may be caused by T4, T3, or the current.
		Bit1	Frequency limit caused by current	
		Bit0	Frequency limit caused by voltage	
43	Average value of T2	(Sum T2 value of all indoor units)/(number of indoor units in good connection)		
44	Outdoor unit fan motor state	Off: 0, High speed:1, Med speed: 2, Low speed: 3, Breeze:4, Super breeze: 5		
45	The last error or protection code	00 means no malfunction and protection		
46	F indoor unit capacity			
47	F indoor unit capacity demand code			
48	F indoor unit evaporator outlet temperature ($T_{2B}F$)			
49	F indoor unit room temperature (T_1F)			
50	F indoor unit evaporator temperature (T_2F)			
51	EXV open angle for F indoor unit			

8.3.2 Outdoor Unit Digital Display

A digital display is featured on the outdoor PCB.

The LED displays different codes in the following situations:

- Standby: "- -."
- Compressor operation: the running frequency.
- Defrosting mode: "dF" or alternative displays between running frequency and "dF" (ach appears for 0.5s.)
- Compressor pre-heating: "PH" or alternative displays between running frequency and "PH" (each appears for 0.5s.)
- Oil return process: "RO" or alternative displays between running frequency and "RO" (each appears for 0.5s.)
- Low ambient cooling mode: "LC" or alternative displays between running frequency and "LC" (each appears for 0.5s.)
- Forced cooling mode: the LED displays "FC" or alternative displays between running frequency and "FC" (each appears for 0.5s).
- PFC module protection occurs three times within 15 minutes: "E6" or alternates between displays of running frequency and "E6" (each appears for 0.5s.)
- In protection or malfunction, the LED displays an error code or protection code.

8.3.3 Outdoor unit error display

Display	LED STATUS	New indoor Error
E0	Outdoor unit EEPROM parameter error	F4
E2	Communication malfunction between indoor and outdoor units	E1
E3	Communication malfunction between IPM board and outdoor main control board	——
E4	Outdoor temperature sensor (coil sensor T3,ambient sensor T4, Compressor discharge sensor T5、indoor coil outlet pipe sensor T2B) malfunction	F2/F1/F3/F6
E5	Over-voltage or under-voltage protection	P1
E6	PFC module protection	——
E8	Outdoor fan speed malfunction	F5
F1	No. A Indoor unit coil outlet temp. sensor malfunction	——
F2	No. B Indoor unit coil outlet temp. sensor malfunction	——
F3	No. C Indoor unit coil outlet temp. sensor malfunction	——
F4	No. D Indoor unit coil outlet temp. sensor malfunction	——
F5	No. E Indoor unit coil outlet temp. sensor malfunction	——
F6	No. F Indoor unit coil outlet temp. sensor malfunction	——
P1	High pressure protection	P2
P2	Low pressure protection	P2
P3	Current overload protection	F0
P4	Temperature protection of compressor discharge	——
P5	Condenser high temperature protection	——
P6	Inverter module (IPM) malfunction	P0
LP	Low ambient temperature protection	——

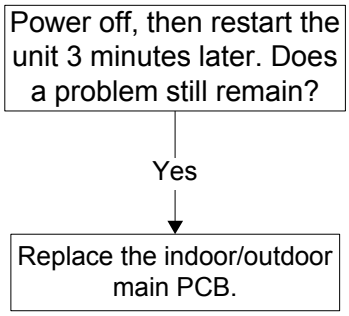
8.4 Diagnosis and Solution

8.4.1 Indoor unit trouble shooting

8.4.1.1 Indoor unit EEPROM parameter error diagnosis and solution.

Malfunction conditions	**Indoor or outdoor PCB main chip does not receive feedback from EEPROM chip.**
Potential causes	● **Installation mistake** ● **Faulty PCB**

Trouble shooting:

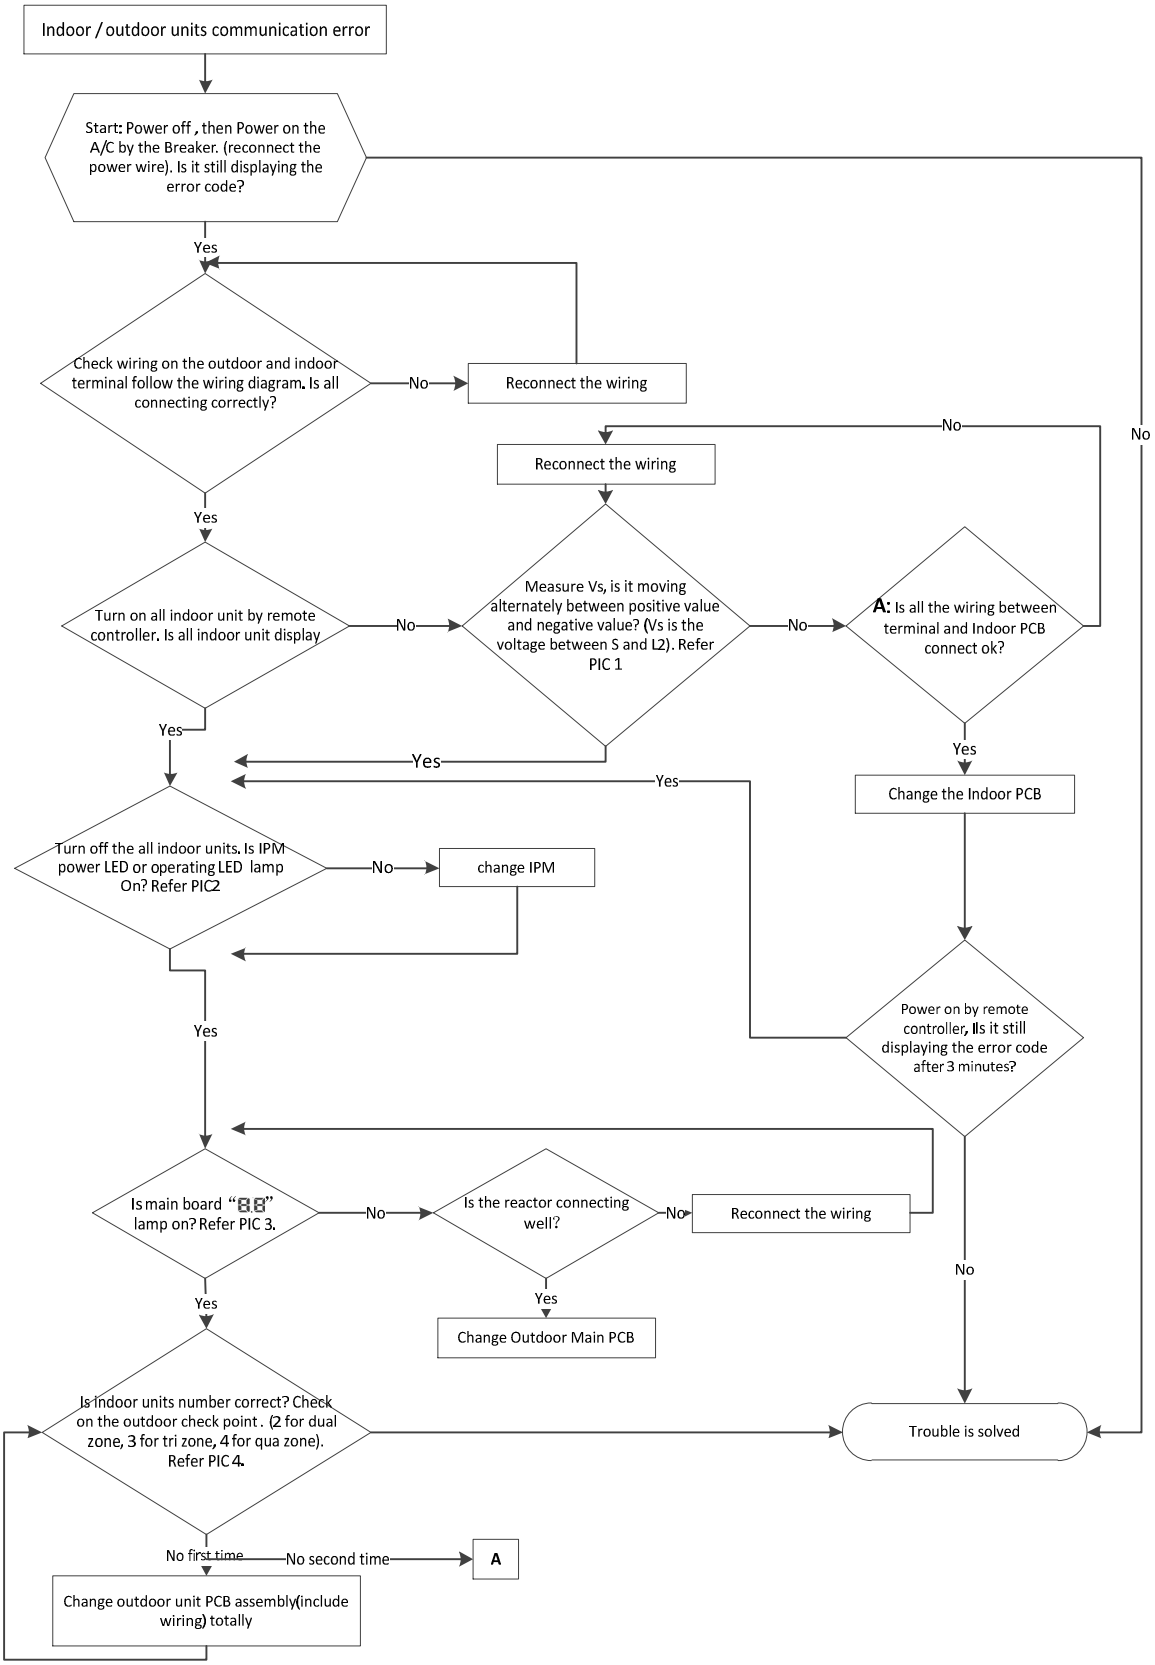


EEPROM: a type of read-only memory. The contents can be erased and reprogrammed using a pulsed voltage. To locate the EEPROM chip,.

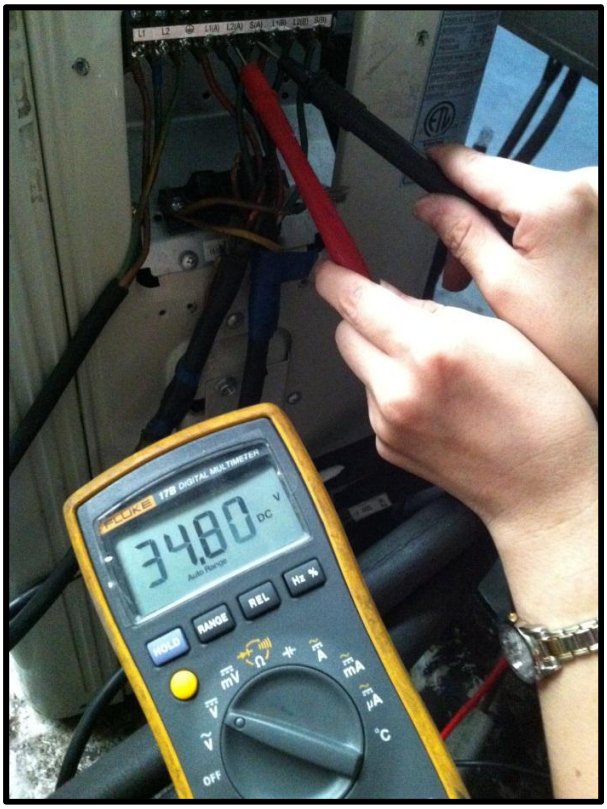
8.4.1.2 Communication malfunction between indoor and outdoor units diagnosis and solution.

Malfunction conditions	If indoor unit does not receive the feedback from outdoor unit during 120 seconds.
Potential causes	● Wiring mistake ● Faulty indoor or outdoor PCB

Trouble shooting:

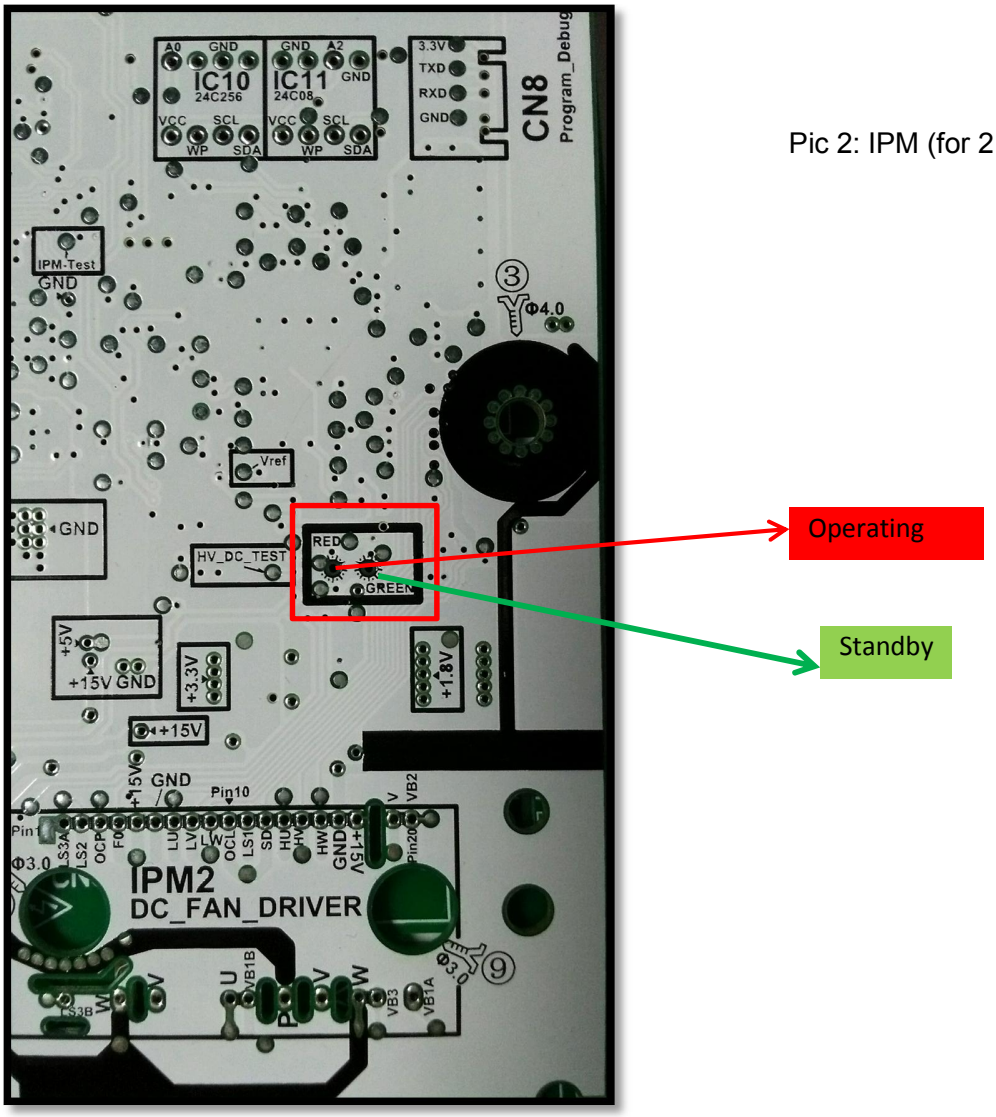


Indoor / outdoor units communication error
Start: Power off , then Power on the A/C by the Breaker. (reconnect the power wire). Is it still displaying the error code?
Yes
No
Check wiring on the outdoor and indoor terminal follow the wiring diagram. Is all connecting correctly?
No
Reconnect the wiring
Yes
Reconnect the wiring
No
Turn on all indoor unit by remote controller. Is all indoor unit display
No
Measure Vs, is it moving alternately between positive value and negative value? (Vs is the voltage between S and L2). Refer PIC 1
No
A: Is all the wiring between terminal and Indoor PCB connect ok?
Yes
Yes
Yes
Yes
Change the Indoor PCB
Turn off the all indoor units. Is IPM power LED or operating LED lamp On? Refer PIC2
No
change IPM
Yes
Power on by remote controller, Is it still displaying the error code after 3 minutes?
Is main board "88" lamp on? Refer PIC 3.
No
Is the reactor connecting well?
No
Reconnect the wiring
No
Yes
Yes
Change Outdoor Main PCB
Is indoor units number correct? Check on the outdoor check point . (2 for dual zone, 3 for tri zone, 4 for qua zone). Refer PIC 4.
Trouble is solved
No first time
No second time
A
Change outdoor unit PCB assembly(include wiring) totally

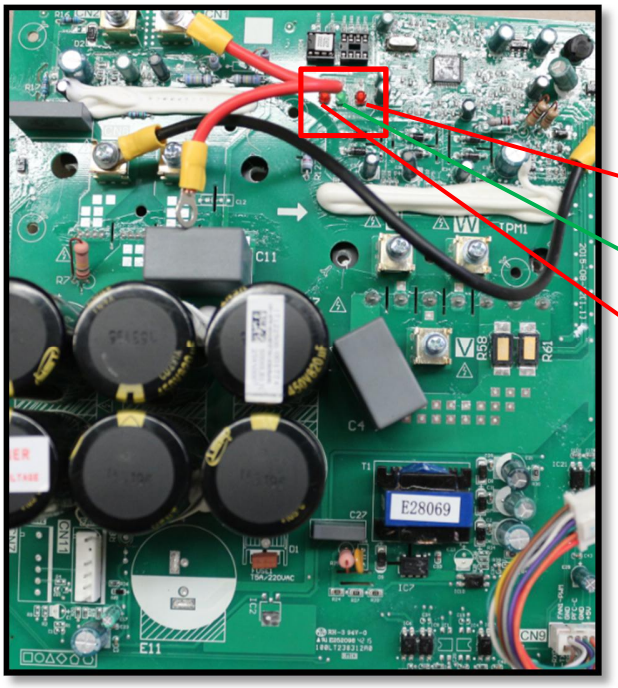


Pic 1: Use a multimeter to test the DC voltage between 2(old: L2) port and S port of outdoor unit. The red pin of multimeter connects with 2 (old: L2) port while the black pin is for S port.

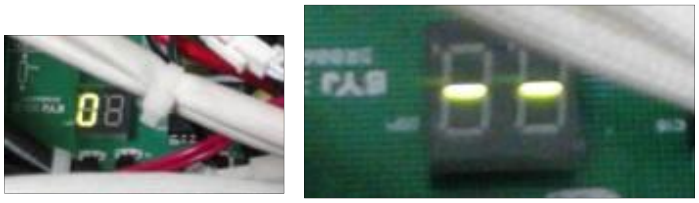
When AC is normal running, the voltage will move alternately between positive value and negative value.



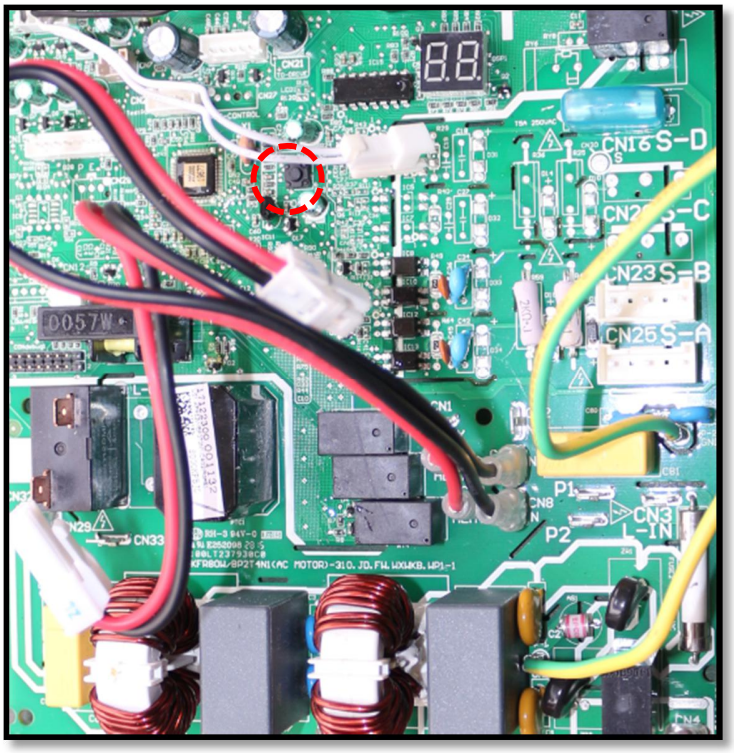
Pic 2: IPM (for 2 zone/ 3-zone)



Pic 2: IPM (for5 zone)



PIC3: Main board LED when power on and unit standby.

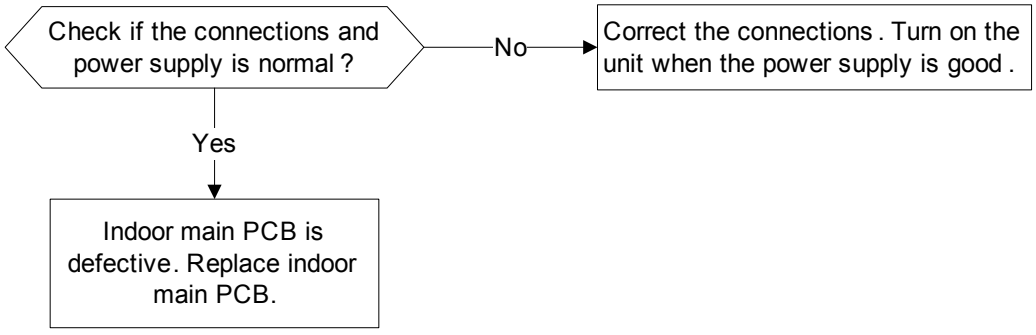


PIC 4: Check point button, press 1 time for check how many indoor units are connected.

8.4.1.3 Zero-crossing signal detection error diagnosis and solution.

Malfunction conditions	When PCB does not receive zero crossing signal feedback for 4 minutes or the zero crossing signal time interval is abnormal.
Potential causes	● Connection mistake ● Faulty PCB

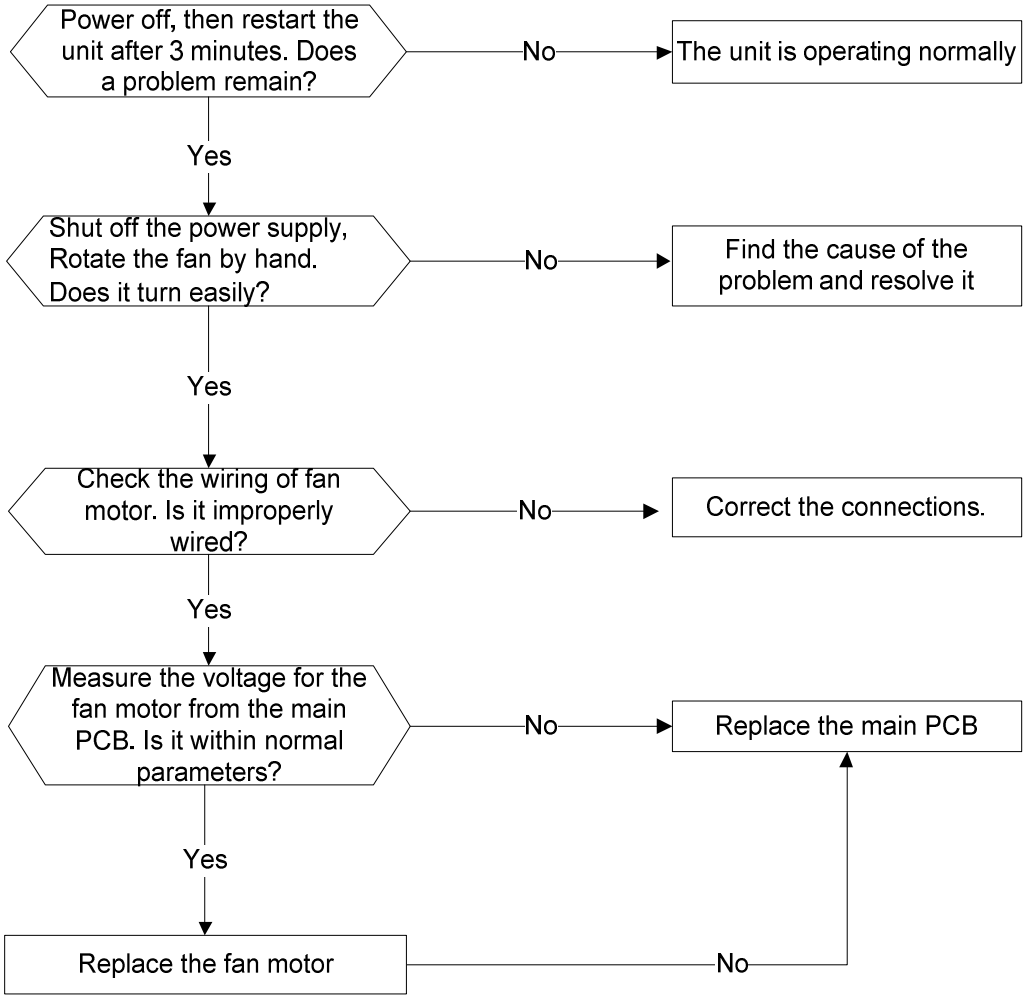
Trouble shooting:



8.4.1.4 Indoor fan speed malfunction diagnosis and solution.

Malfunction conditions	**When indoor fan speed is too low (300RPM) for a certain period of time, the unit ceases operation and the LED displays a failure code.**
Potential causes	• **Wiring mistake** • **Faulty fan assembly** • **Faulty fan motor** • **Faulty PCB**

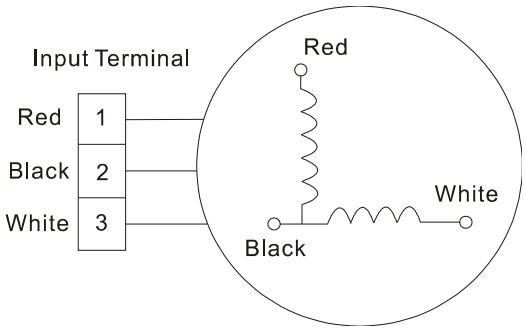
Trouble shooting:



Index 1:

1: Indoor AC fan motor

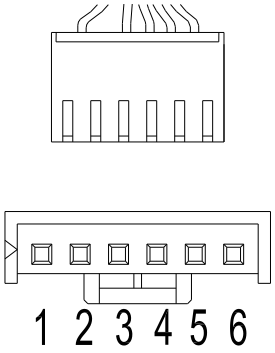
Power on and set the unit running in fan mode at high fan speed. After running for 15 seconds, measure the voltage of pin1 and pin2. If the value of the voltage is less than 100V (208~240V power supply)or 50V(115V power supply), the PCB must have problems and need to be replaced.



2. Indoor DC fan motor (control chip is inside fan motor)

Power on and when the unit is in standby, measure the voltage of pin1-pin3, pin4-pin3 in fan motor connector. If the value of the voltage is not in the range showing in below table, the PCB must have problems and need to be replaced.

For other models:



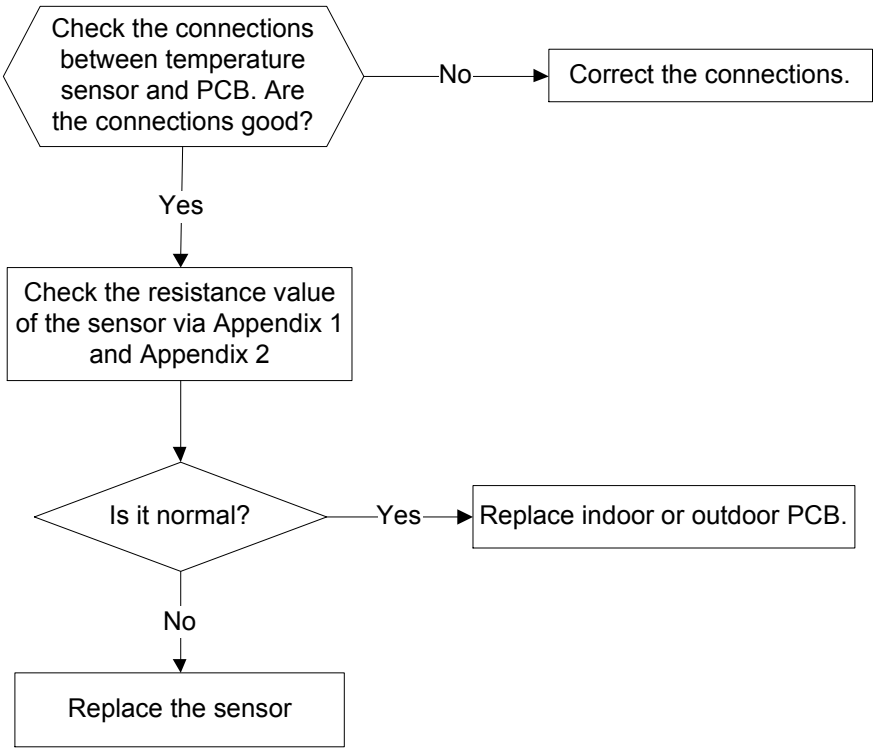
DC motor voltage input and output

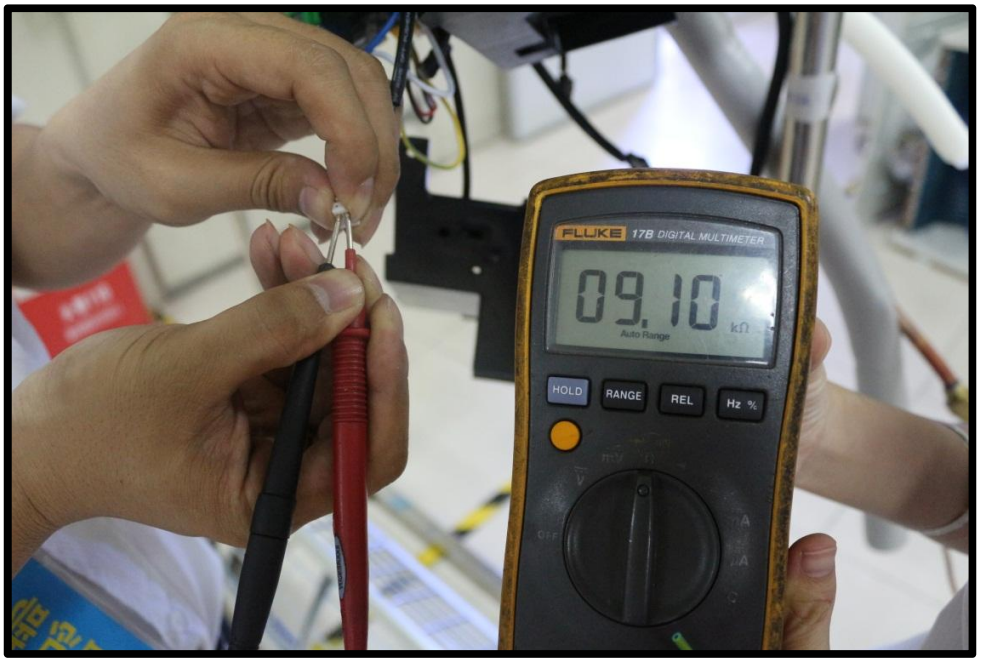
NO.	Color	Signal	Voltage
1	Red	Vs/Vm	200V~380V
2	---	---	---
3	Black	GND	0V
4	White	Vcc	13.5-16.5V
5	Yellow	Vsp	0~6.5V
6	Blue	FG	13.5-16.5V

8.4.1.5 Temperature sensor malfunction diagnosis and solution.

Malfunction conditions	**If the sampling voltage is lower than 0.06V or higher than 4.94V, the LED displays a failure.**
Potential causes	● **Wiring mistake** ● **Faulty sensor** ● **Faulty PCB**

Trouble shooting:

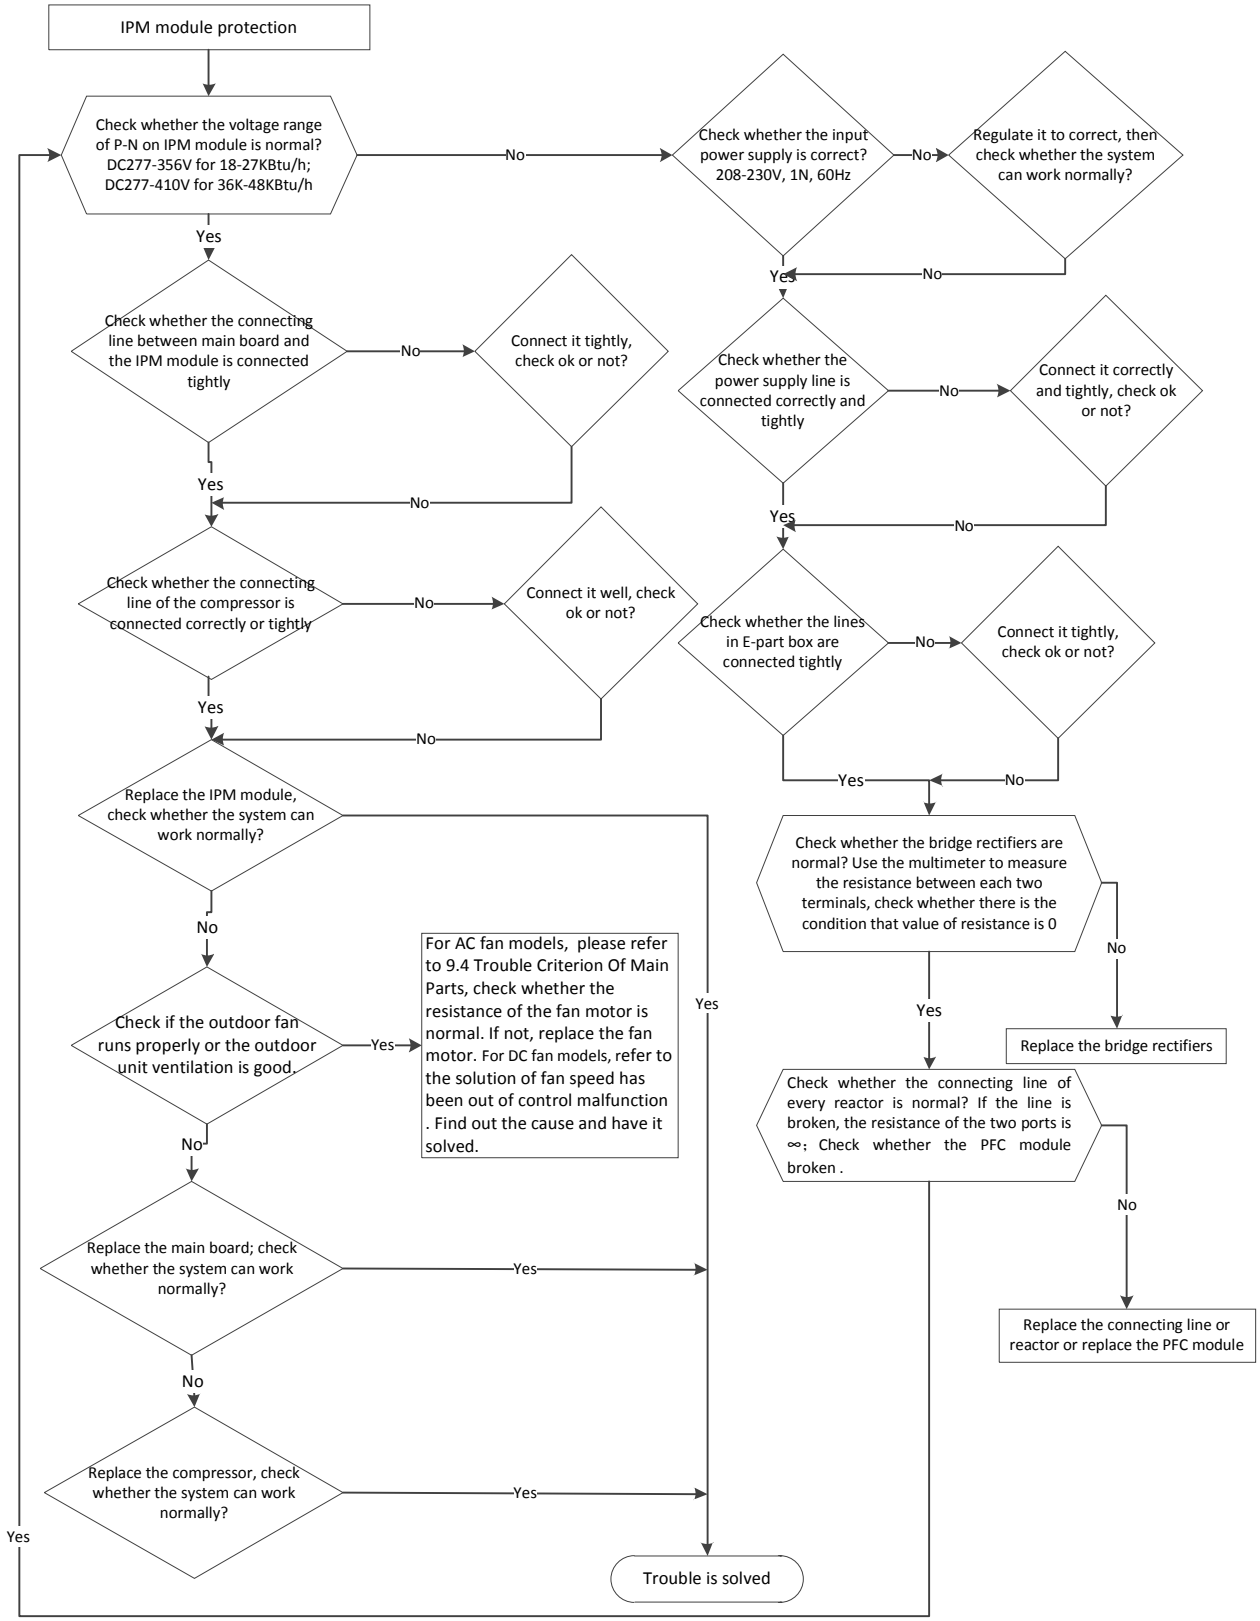




8.4.1.6 Inverter module (IPM) malfunction diagnosis and solution.

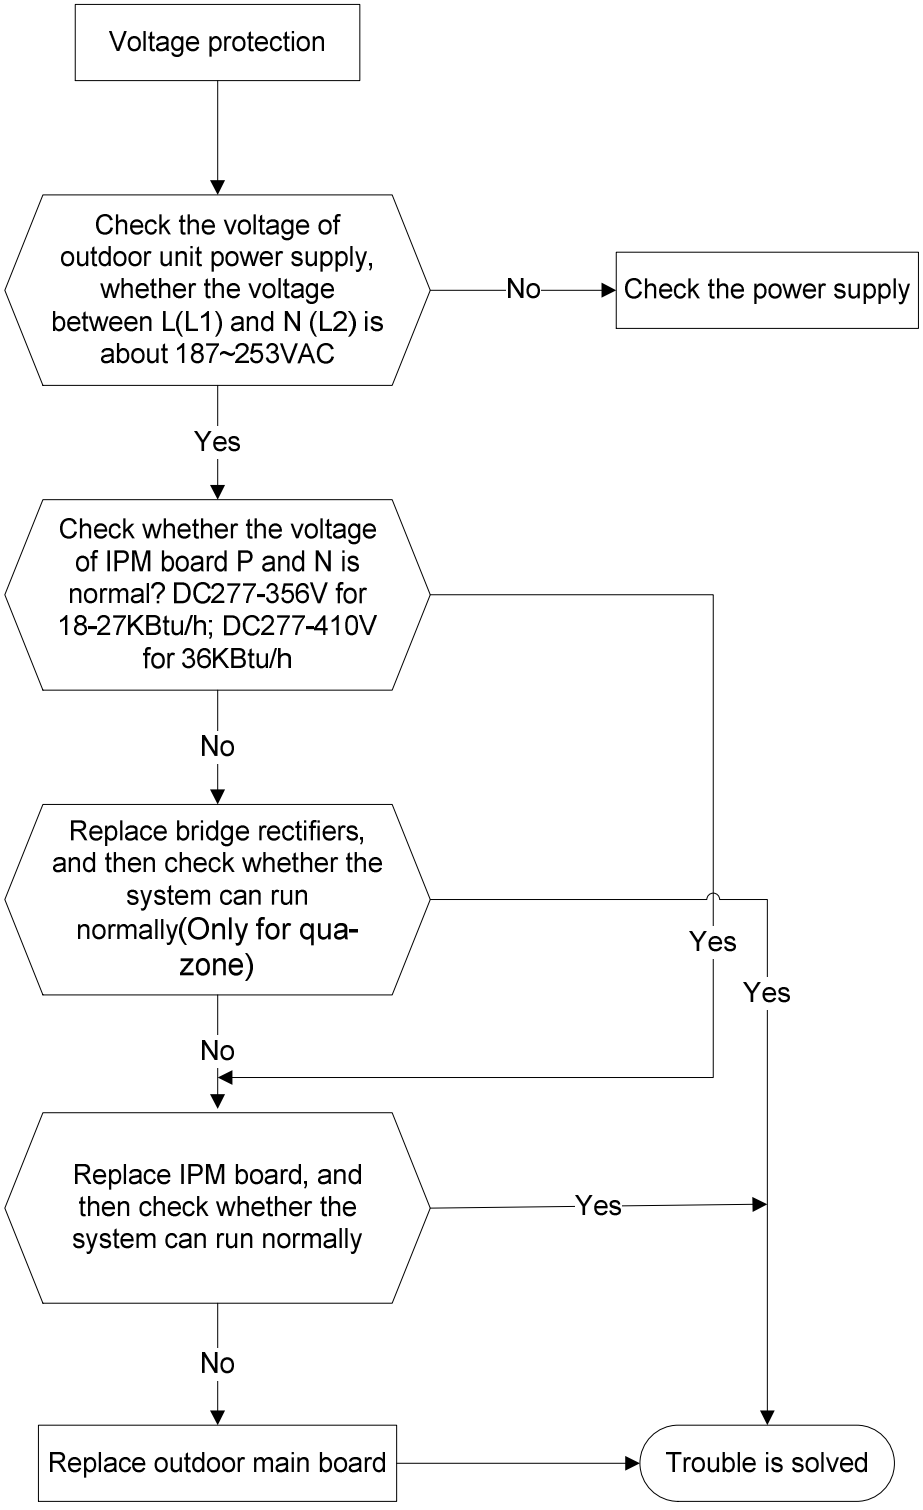
Malfunction conditions	When the voltage signal that IPM send to compressor drive chip is abnormal, the display LED will show “P6” and AC will turn off.
Potential causes	● Wiring mistake ● IPM malfunction ● Faulty outdoor fan assembly ● Compressor malfunction ● Faulty outdoor PCB

Trouble shooting:



IPM module protection
Check whether the voltage range of P-N on IPM module is normal? DC277-356V for 18-27KBtu/h; DC277-410V for 36K-48KBtu/h
No
Check whether the input power supply is correct? 208-230V, 1N, 60Hz
No
Regulate it to correct, then check whether the system can work normally?
No
Yes
Yes
Check whether the connecting line between main board and the IPM module is connected tightly
No
Connect it tightly, check ok or not?
Yes
No
Check whether the power supply line is connected correctly and tightly
No
Connect it correctly and tightly, check ok or not?
Yes
No
Check whether the connecting line of the compressor is connected correctly or tightly
No
Connect it well, check ok or not?
Yes
No
Check whether the lines in E-part box are connected tightly
No
Connect it tightly, check ok or not?
Yes
No
Replace the IPM module, check whether the system can work normally?
Yes
Check whether the bridge rectifiers are normal? Use the multimeter to measure the resistance between each two terminals, check whether there is the condition that value of resistance is 0
No
Replace the bridge rectifiers
Yes
No
Check if the outdoor fan runs properly or the outdoor unit ventilation is good.
Yes
For AC fan models, please refer to 9.4 Trouble Criterion Of Main Parts, check whether the resistance of the fan motor is normal. If not, replace the fan motor. For DC fan models, refer to the solution of fan speed has been out of control malfunction . Find out the cause and have it solved.
Check whether the connecting line of every reactor is normal? If the line is broken, the resistance of the two ports is ∞; Check whether the PFC module broken .
No
Replace the connecting line or reactor or replace the PFC module
Yes
Replace the main board; check whether the system can work normally?
Yes
No
Replace the compressor, check whether the system can work normally?
Yes
Yes
Trouble is solved

8.4.1.7 Over-voltage or under-voltage protection diagnosis and solution.

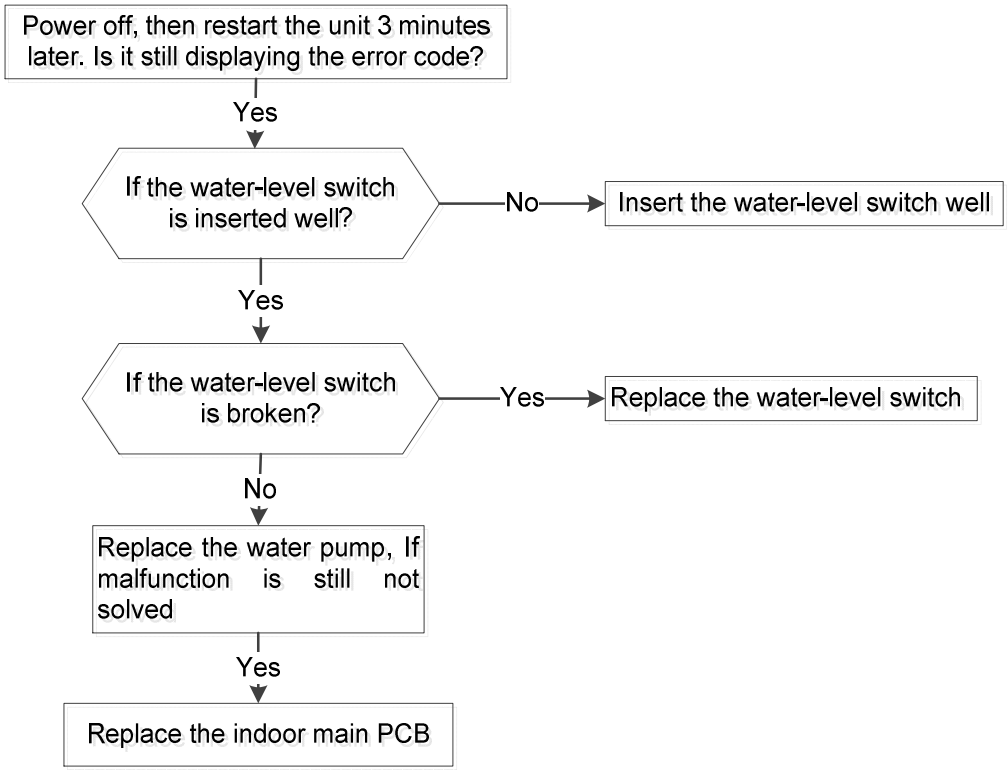


8.4.1.8 Compressor drive malfunction diagnosis and solution

The trouble shooting is same with one of IPM module protection.

8.4.1.9 Water-level alarm malfunction diagnosis and solution

Malfunction conditions	If the sampling voltage is not 5V, the LED will display the failure code.
Potential causes	● Wiring mistakes ● Faulty water-level switch ● Faulty water pump ● Faulty indoor PCB



8.4.1.10 Indoor units mode conflict

Error Code	P5(old model) or - -(new model)
Malfunction conditions	The indoor units cannot work cooling mode and heating at same time. Heating mode has a priority.
Potential causes	● Suppose Indoor unit A working in cooling mode or fan mode, and indoor unit B is set to heating mode, then A will change to off and B will work in heating mode. ● Suppose Indoor unit A working in heating mode, and indoor unit B is set to cooling mode or fan mode, then B will change to stand by and A will be no change.

	Cooling mode	Heating Mode	Fan	Off
Cooling mode	No	Yes	No	No
Heating Mode	Yes	No	Yes	No
Fan	No	Yes	No	No
Off	No	No	No	No

No: No mode conflict;

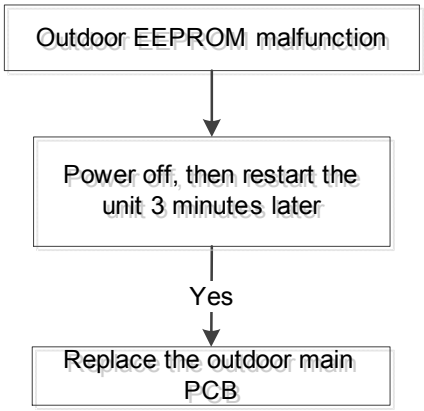
Yes: Mode conflict

8.4.2 Outdoor unit trouble shooting

8.4.2.1 E0 (Outdoor unit EEPROM parameter error) diagnosis and solution

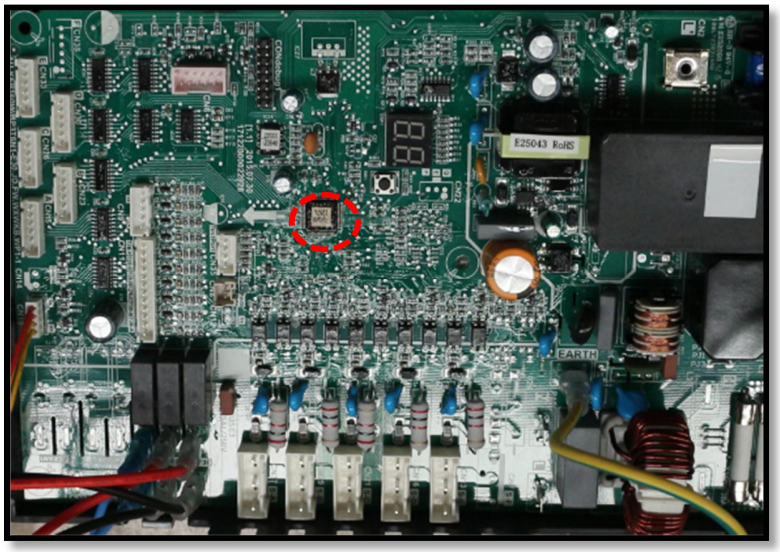
Error Code	E0
Malfunction conditions	PCB main chip does not receive feedback from EEPROM chip
Potential causes	● Installation mistake ● Faulty PCB

Trouble shooting:



EEPROM: a type of read-only memory. The contents can be erased and reprogrammed using a pulsed voltage.

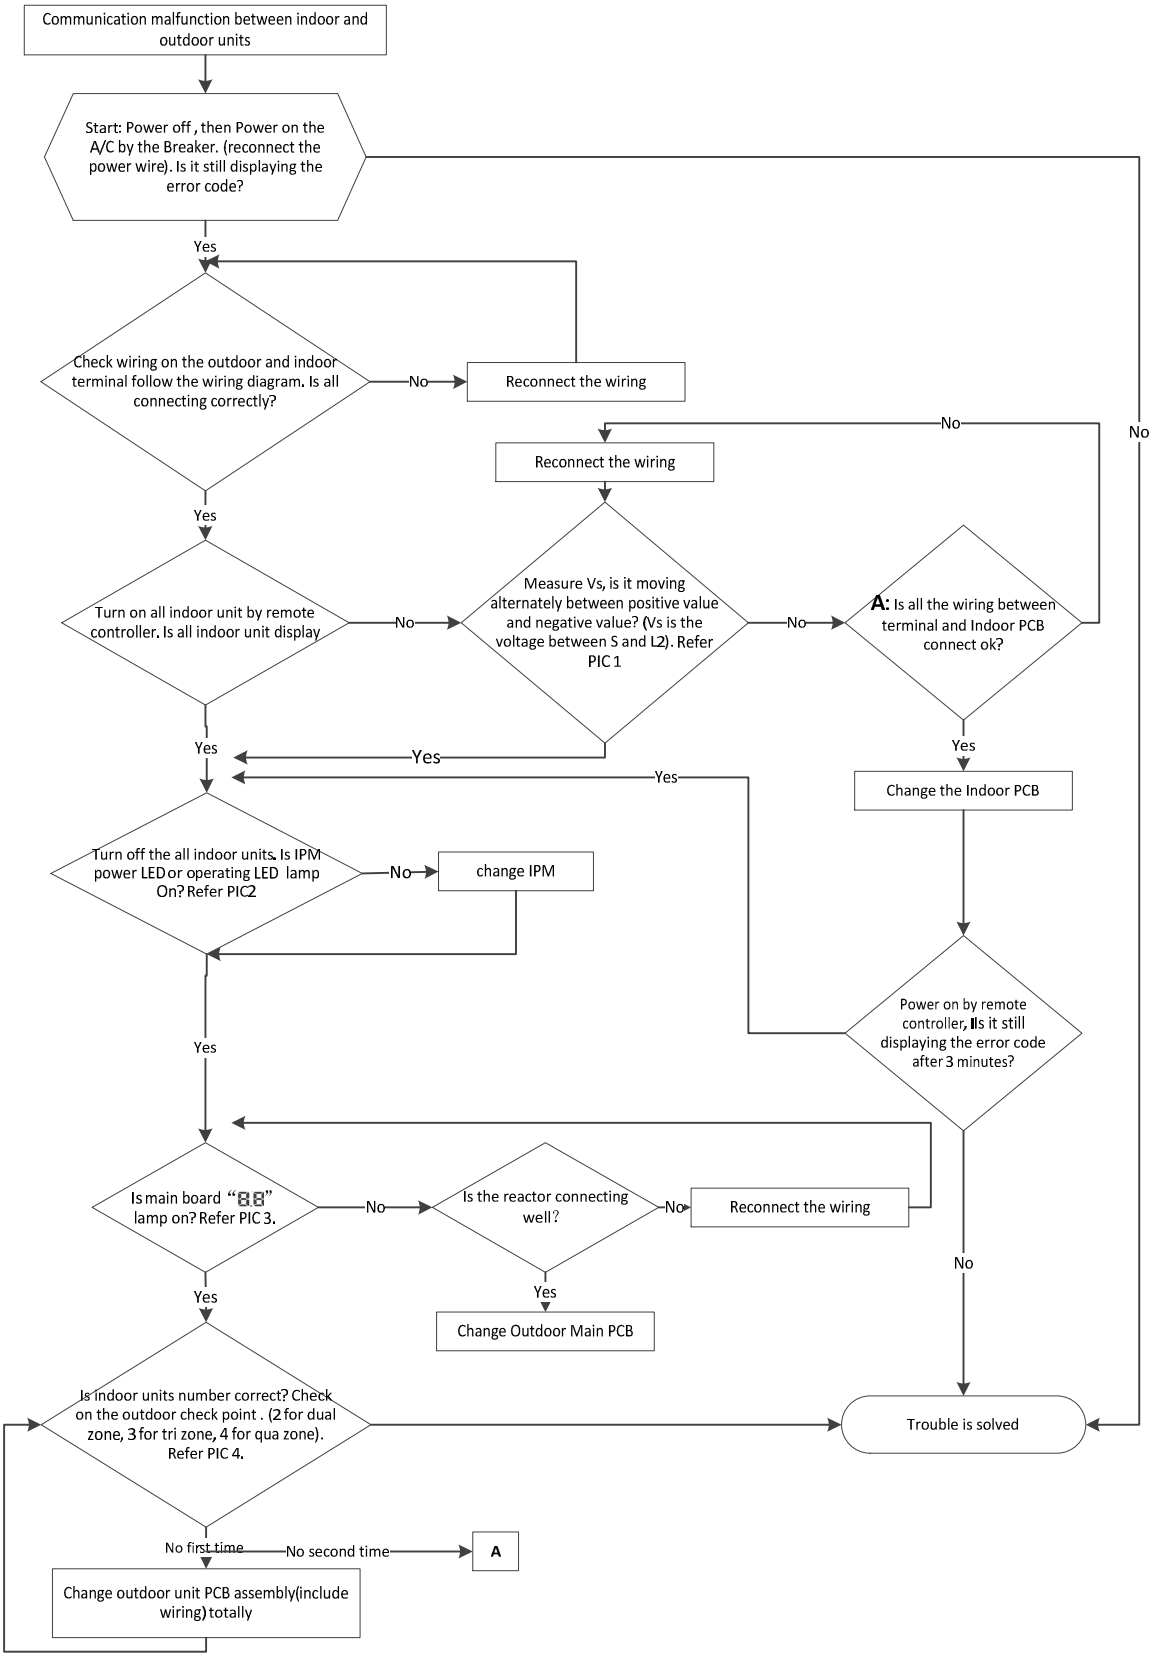
refer to the following photos.



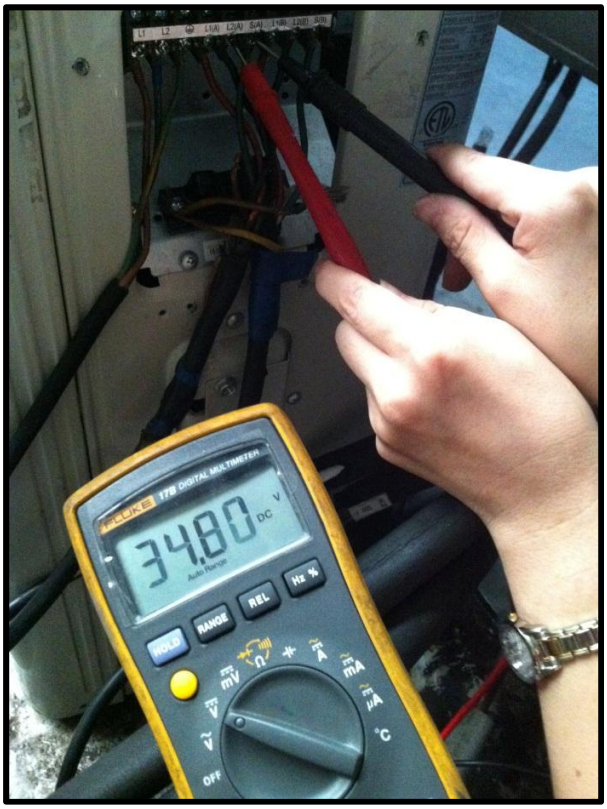
8.4.2.2 E2(Communication malfunction between indoor and outdoor units) diagnosis and solution.

Error Code	E2
Malfunction conditions	Indoor unit does not receive the feedback from outdoor unit during 120 seconds or outdoor unit does not receive the feedback from any one indoor unit during 180 seconds.
Potential causes	● Wiring mistake ● Faulty Indoor or outdoor PCB

Trouble shooting:

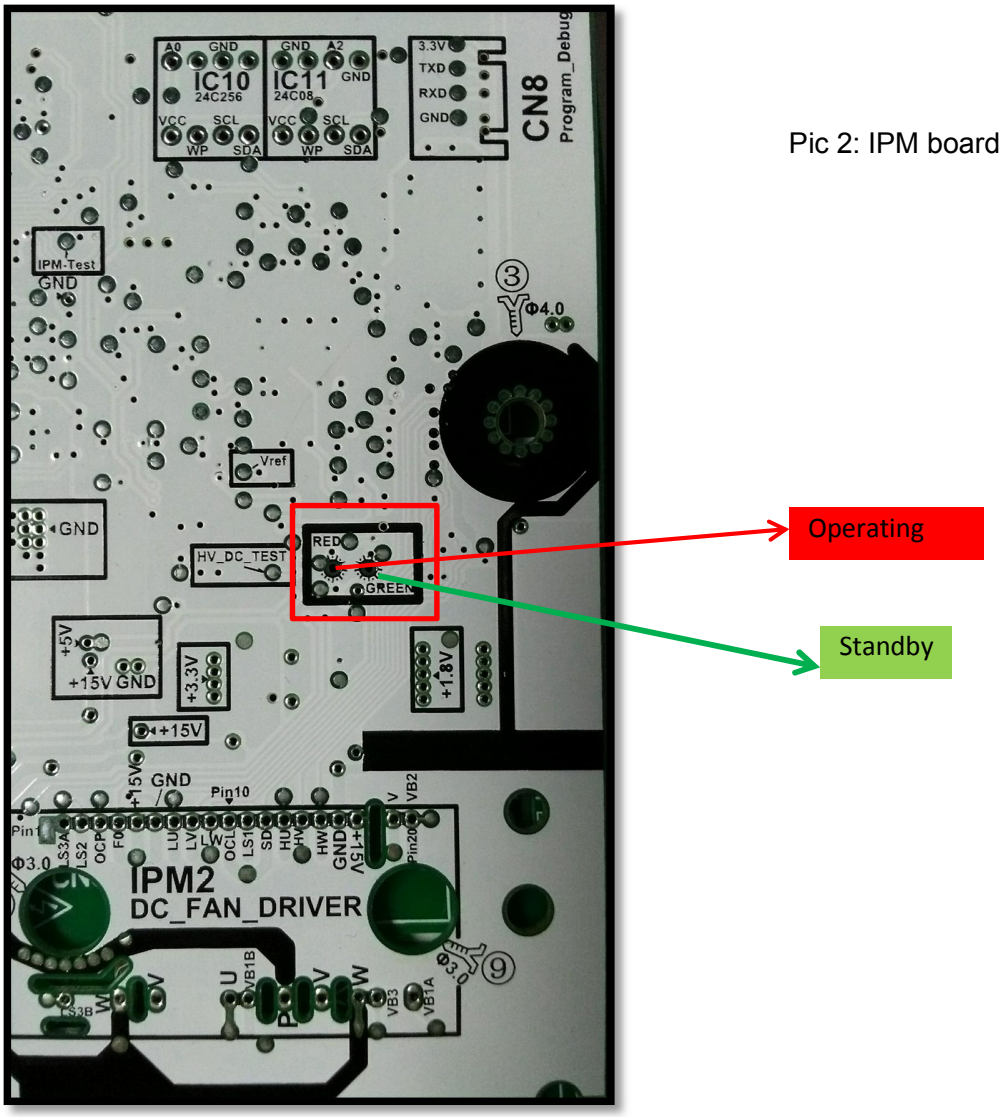


Communication malfunction between indoor and outdoor units
Start: Power off , then Power on the A/C by the Breaker. (reconnect the power wire). Is it still displaying the error code?
Yes
No
Check wiring on the outdoor and indoor terminal follow the wiring diagram. Is all connecting correctly?
No
Reconnect the wiring
Yes
Reconnect the wiring
Turn on all indoor unit by remote controller. Is all indoor unit display
No
Measure Vs, is it moving alternately between positive value and negative value? (Vs is the voltage between S and L2). Refer PIC 1
No
A: Is all the wiring between terminal and Indoor PCB connect ok?
No
Yes
Yes
Yes
Yes
Change the Indoor PCB
Turn off the all indoor units. Is IPM power LED or operating LED lamp On? Refer PIC2
No
change IPM
Power on by remote controller, Is it still displaying the error code after 3 minutes?
Yes
Is main board "88" lamp on? Refer PIC 3.
No
Is the reactor connecting well?
No
Reconnect the wiring
No
Yes
Yes
Change Outdoor Main PCB
Is indoor units number correct? Check on the outdoor check point . (2 for dual zone, 3 for tri zone, 4 for qua zone). Refer PIC 4.
Trouble is solved
No first time
No second time
A
Change outdoor unit PCB assembly(include wiring) totally

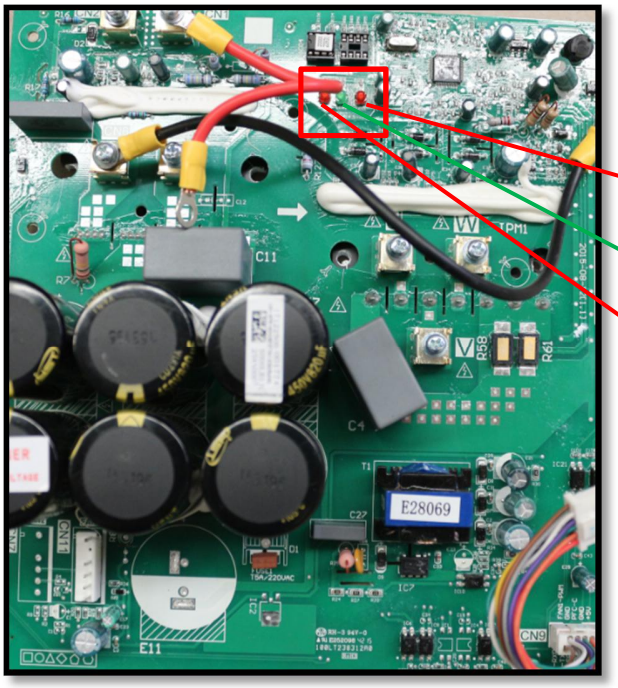


Pic 1: Use a multimeter to test the DC voltage between 2(old: L2) port and 3 port of outdoor unit. The red pin of multimeter connects with 2 (old: L2) port while the black pin is for 3 port.

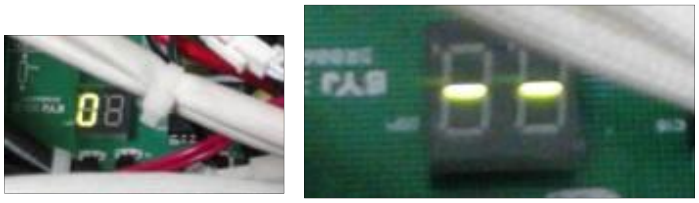
When AC is normal running, the voltage will move alternately between positive value and negative value.



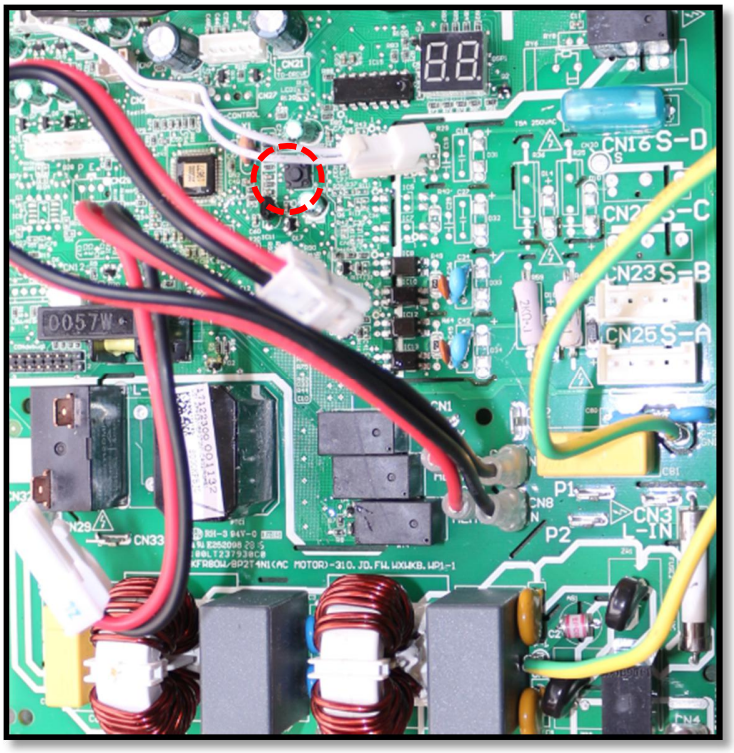
Pic 2: IPM board (for 2 zone/ 3-zone)



Pic 2: IPM (for5 zone)



PIC3: Main board LED when power on and unit standby.

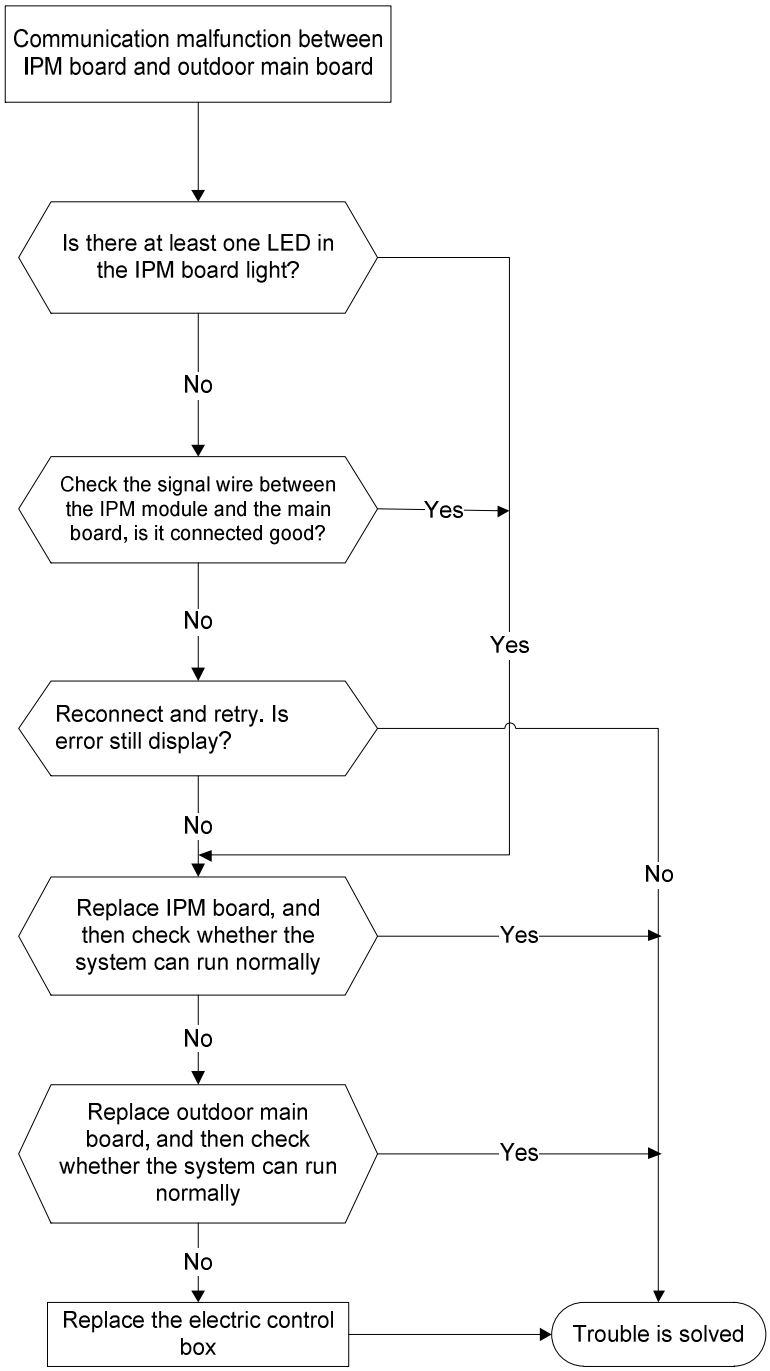


PIC 4: Check point button, press 1 time for check how many indoor units are connected.

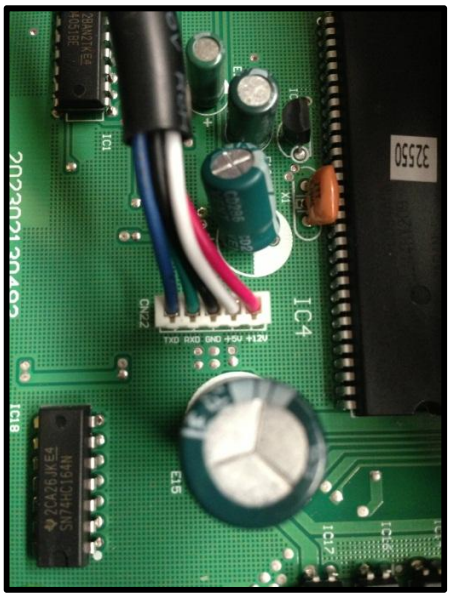
8.4.2.3 E3 (Communication malfunction between IPM board and outdoor main control board) diagnosis

Error Code	E3
Malfunction conditions	PCB main chip does not receive feedback from IPM module during 60 seconds.
Potential causes	● Wiring mistake ● Faulty PCB

Trouble shooting:



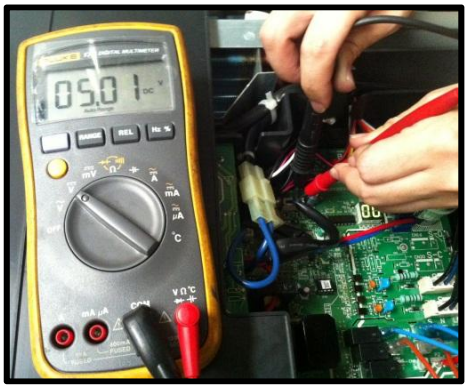
Communication malfunction between IPM board and outdoor main board
Is there at least one LED in the IPM board light?
No
Check the signal wire between the IPM module and the main board, is it connected good?
Yes
No
Yes
Reconnect and retry. Is error still display?
No
No
Replace IPM board, and then check whether the system can run normally
Yes
No
Replace outdoor main board, and then check whether the system can run normally
Yes
No
Replace the electric control box
Trouble is solved



Remark:

Use a multimeter to test the DC voltage between black pin and white pin of signal wire The normal value should be around 5V.

Use a multimeter to test the DC voltage between black pin and red pin of signal wire. The normal value should be around 12V.

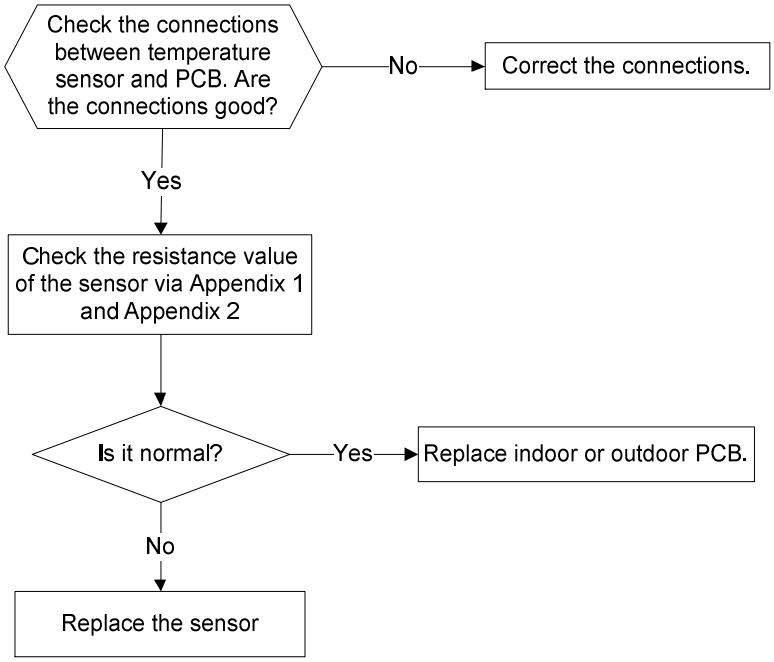


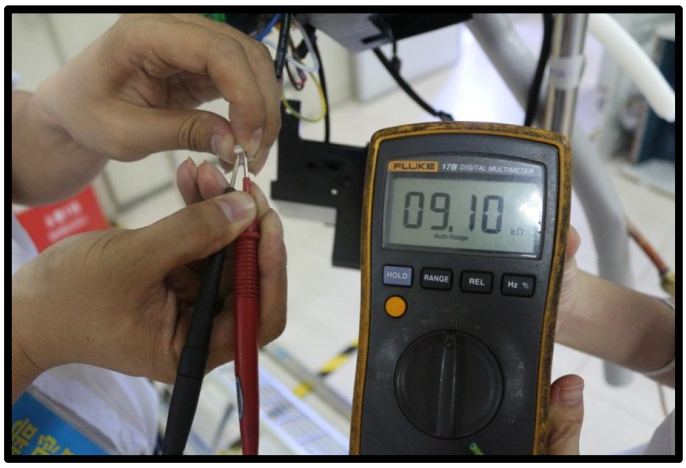
8.4.2.4 E4 (Outdoor temperature sensor (coil sensor T3,ambient sensor T4, Compressor discharge sensor T5、indoor coil outlet pipe sensor T2B) malfunction) diagnosis and solution
F1/F2/F3/F4/F5 (No.A,B,C,D,E Indoor unit coil outlet temp. sensor malfunction) diagnosis and solution.

.

Error Code	E4/F1/F2/F3/F4/F5
Malfunction conditions	If the sampling voltage is lower than 0.06V or higher than 4.94V, the LED will display the failure.
Potential causes	● Wiring mistake ● Faulty sensor ● Faulty PCB

Trouble shooting:

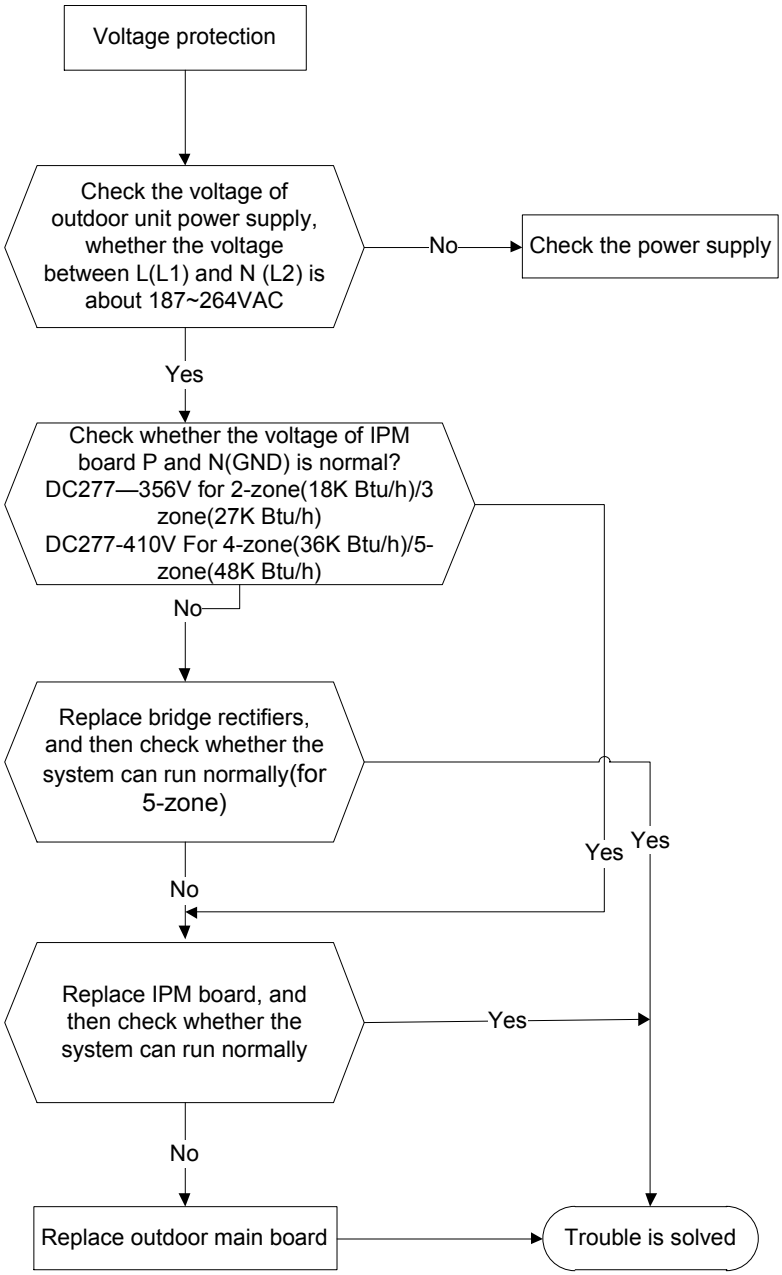


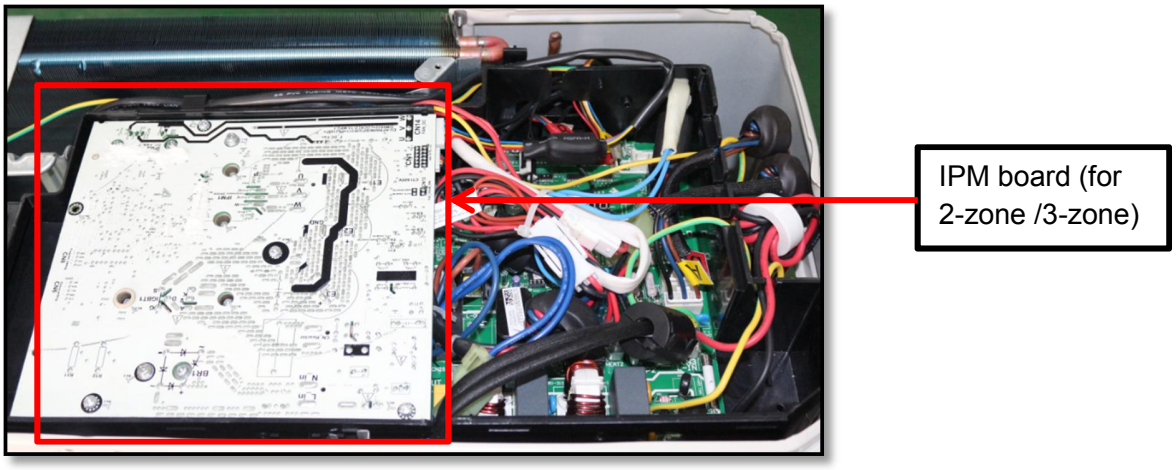


8.4.2.5 E5 (Over-voltage or under-voltage protection) diagnosis and solution.

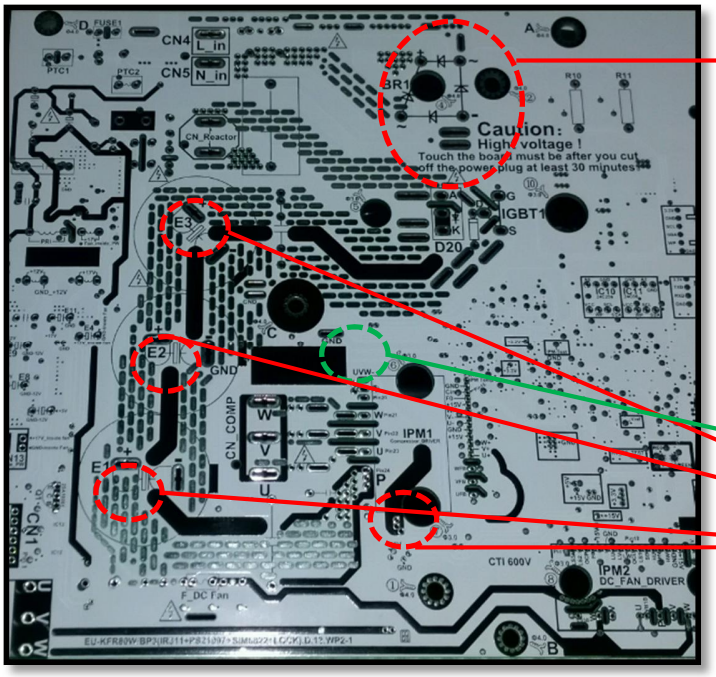
Error Code	E5
Malfunction conditions	An abnormal voltage rise or drop is detected by checking the specified voltage detection circuit.
Potential causes	● Power supply problems. ● System leakage or block ● Faulty PCB

Trouble shooting:





IPM board (for
2-zone /3-zone)



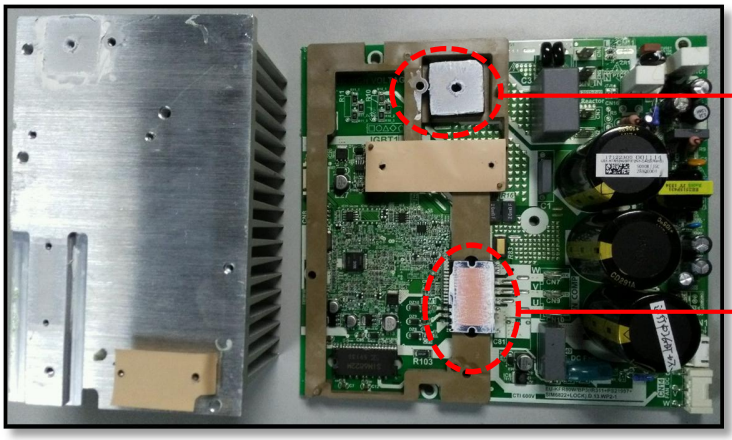
Bridge rectifier
(for 2-zone/3-zone)

Remark:

Measure the DC voltage between + and - port. The normal value should be 190V~250V.

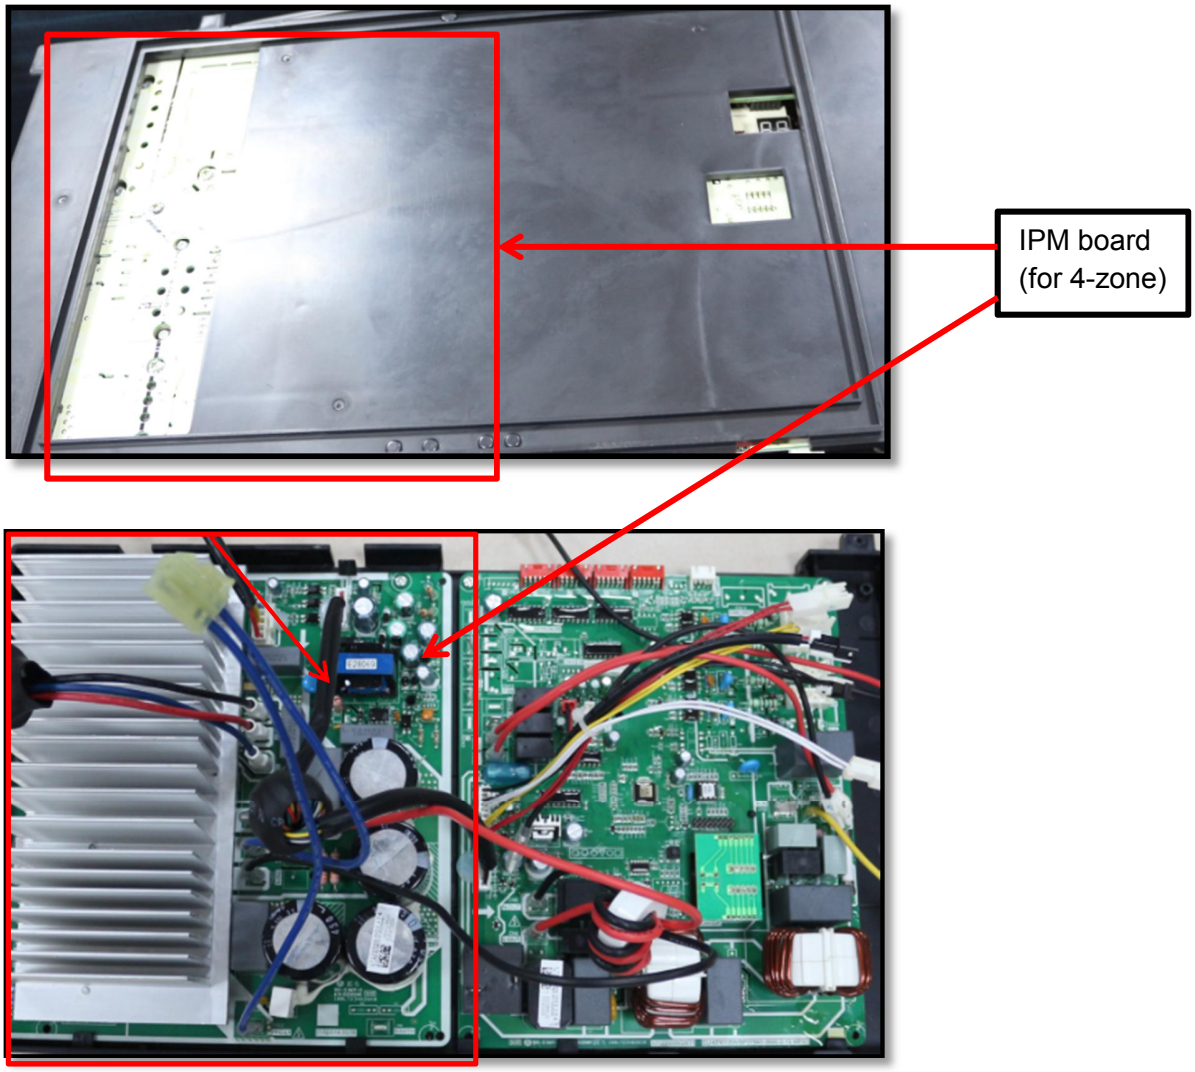
P(or E1/E2/E3)-N(GND)

(for 2-zone/3-zone)

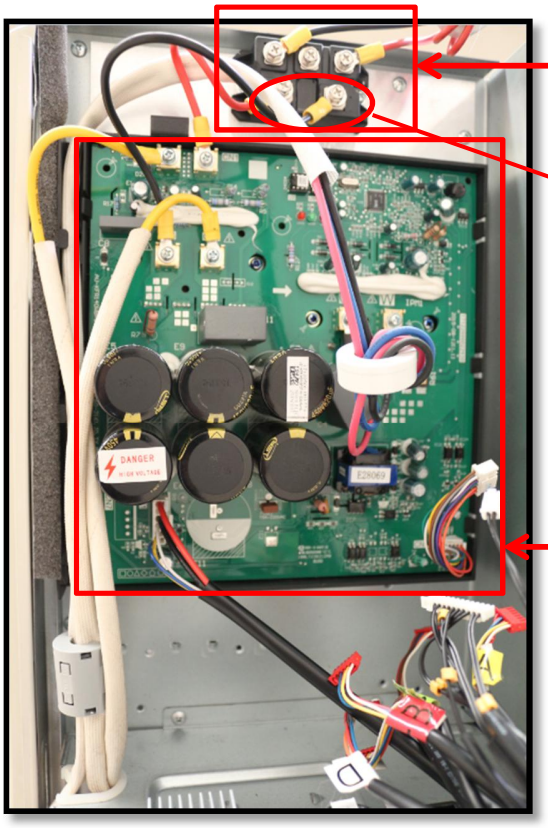


Bridge rectifier
(for 2-zone/3-zone)

IPM Module
(for 2-zone/3-zone)



IPM board
(for 4-zone)

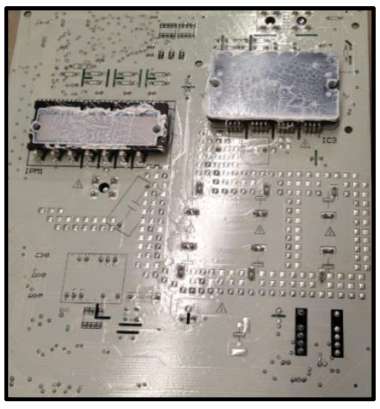


Bridge rectifier
(for 5-zone)

Remark:

Measure the DC voltage between + and - port. The normal value should be 190V~250V.

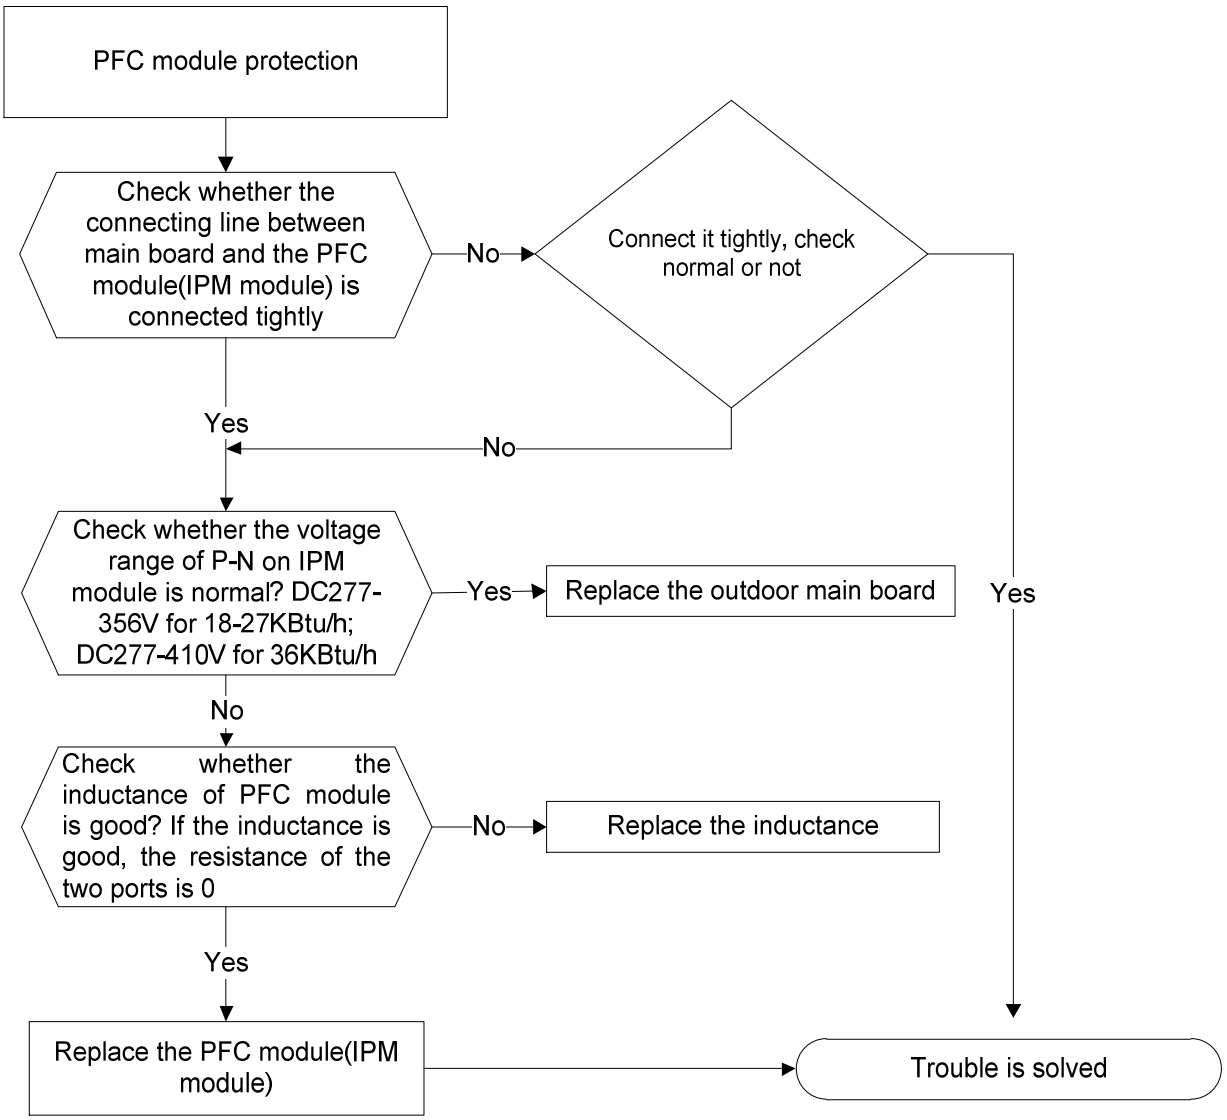
IPM board
(for 5-zone)

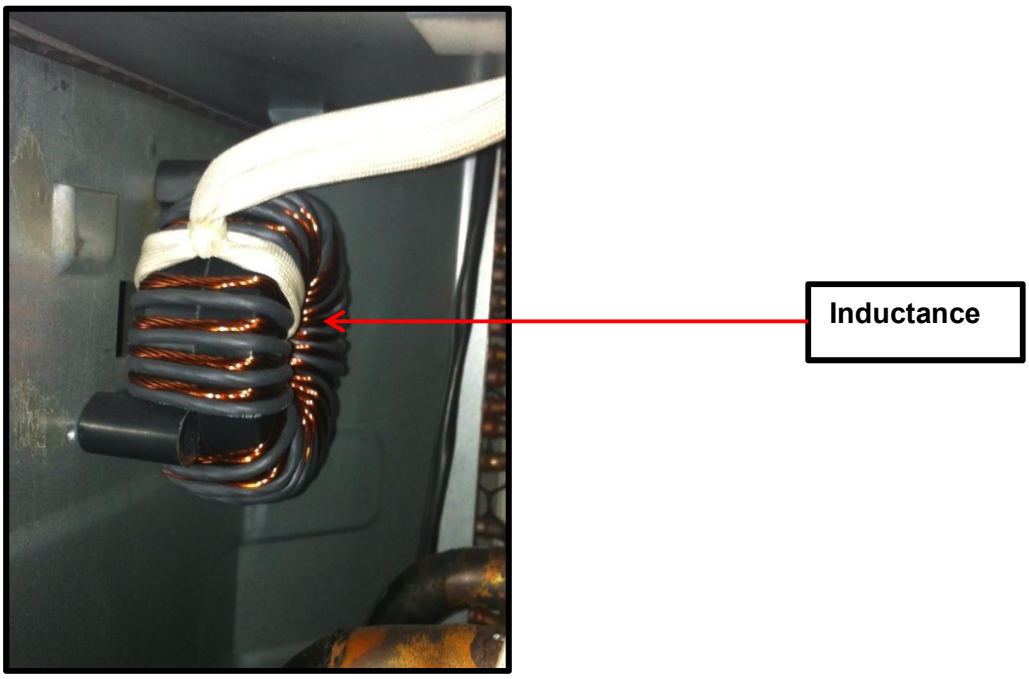


8.4.2.6 E6 (PFC module protection) error diagnosis and solution.

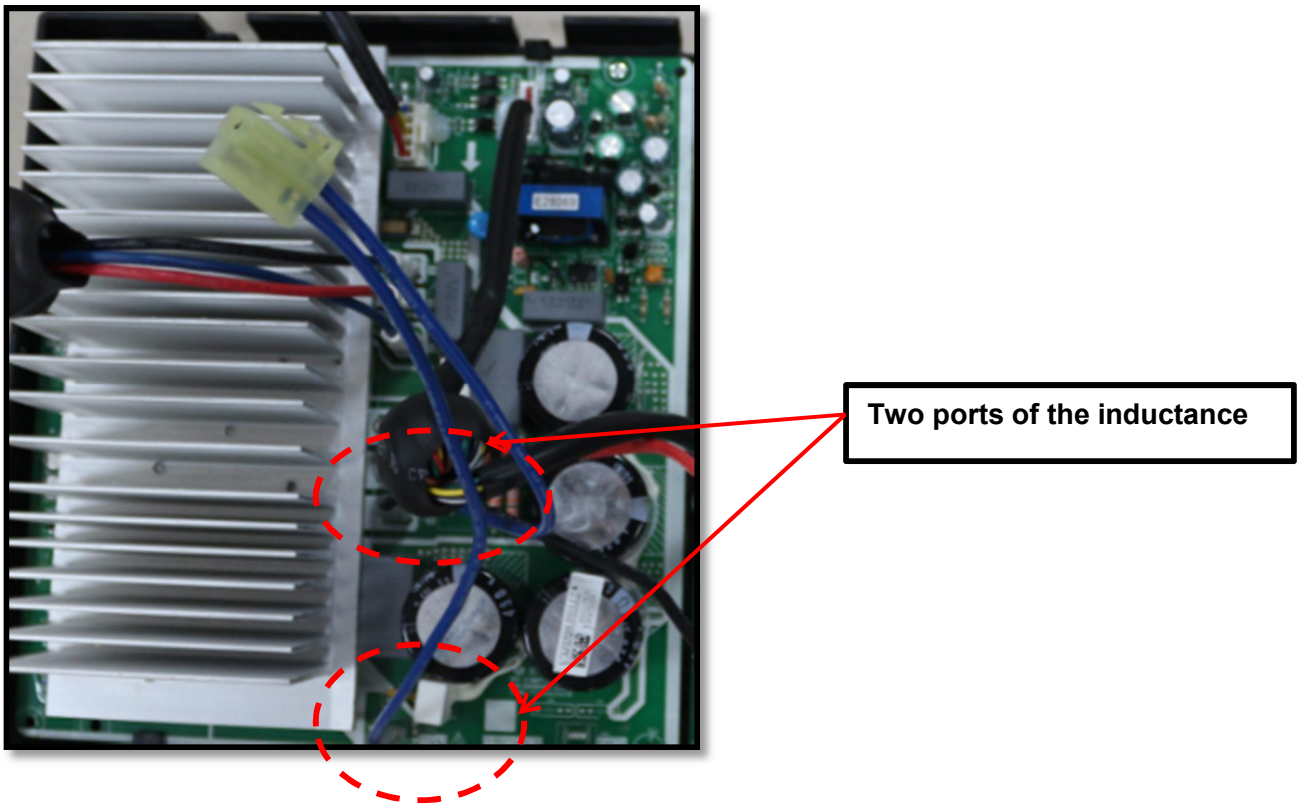
Error Code	E6
Malfunction conditions	When the voltage signal that PFC sends to main control board is abnormal, the display LED will show “E6” and AC will turn off.
Potential causes	● Wiring mistake ● Faulty outdoor PCB ● Faulty inductance of PFC module ● PFC module malfunction

Trouble shooting:





Inductance

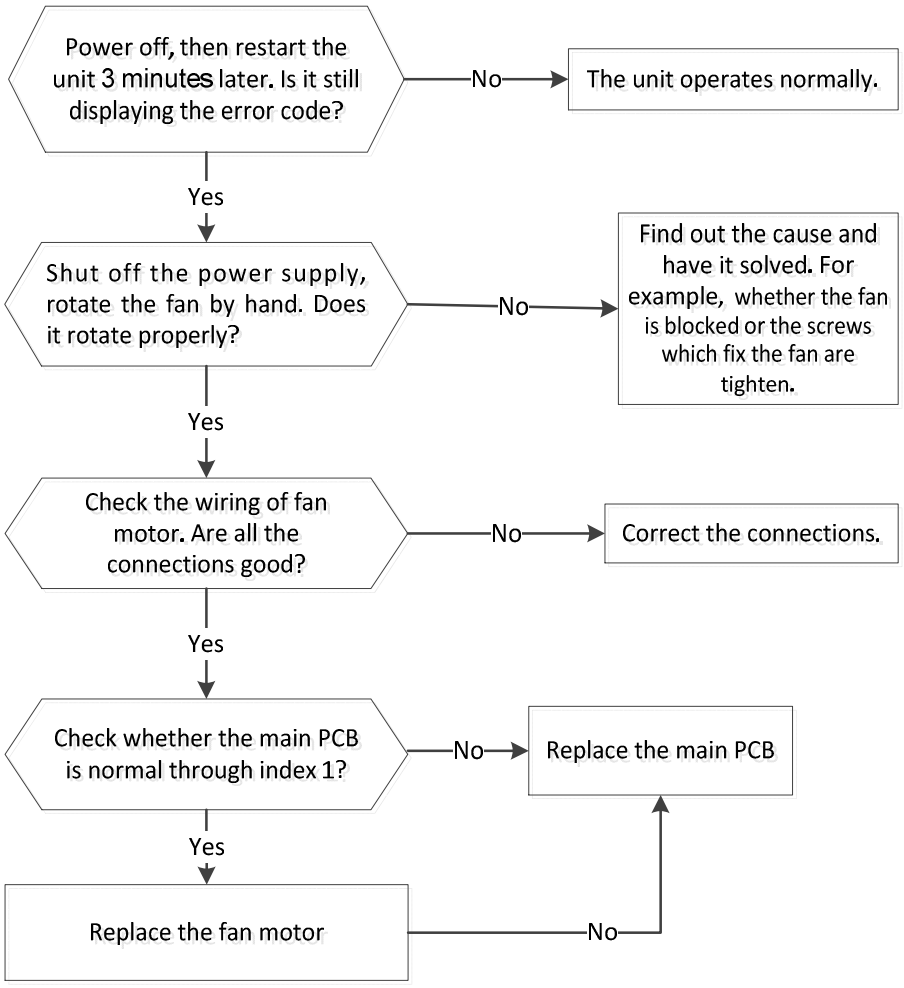


Two ports of the inductance

8.4.2.7 E8 (Outdoor fan speed malfunction) diagnosis and solution

Error Code	E8
Malfunction conditions	When outdoor fan speed keeps too low (300RPM) or too high(2400RPM) for certain time, the unit will stop and the LED will display the failure.
Potential causes	● Wiring mistake ● Faulty Fan assembly ● Faulty Fan motor ● Faulty PCB

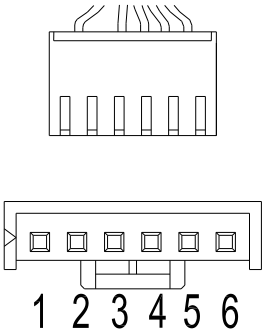
Trouble shooting:



Index 1:

➢ 1. DC fan motor(control chip is inside fan motor)

Power on and when the unit is in standby, measure the voltage of pin1-pin3, pin4-pin3 in fan motor connector. If the value of the voltage is not in the range showing in below table, the PCB must have problems and need to be replaced.



DC motor voltage input and output

NO.	Color	Signal	Voltage
1	Red	Vs/Vm	200~380V
2	---	---	---
3	Black	GND	0V
4	White	Vcc	13.5~16.5V
5	Yellow	Vsp	0~6.5V
6	Blue	FG	13.5~16.5V

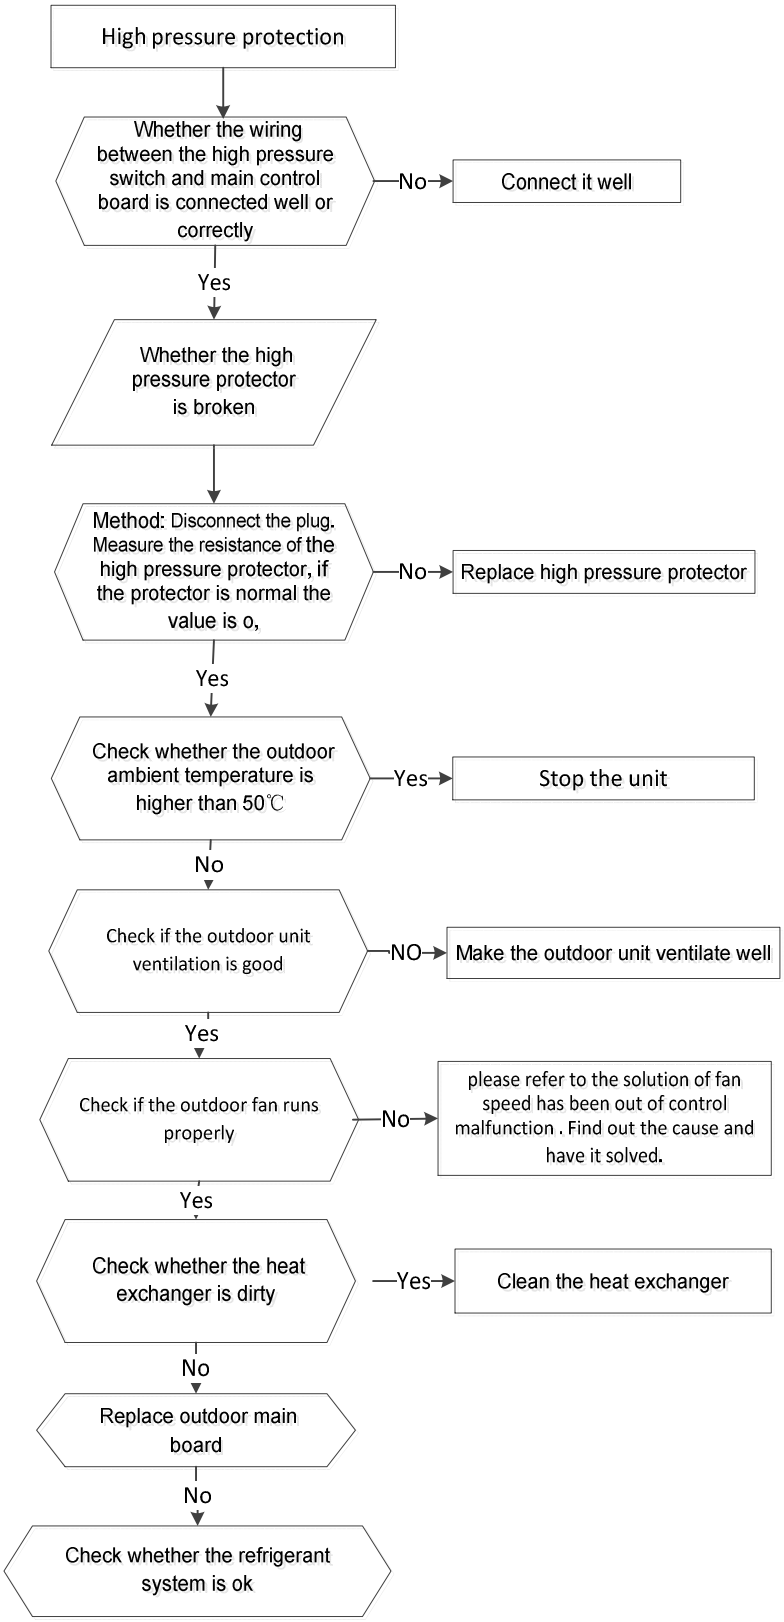
8.4.2.8 P1 (High pressure protection) diagnosis and solution.

Error Code	P1
Malfunction conditions	If the sampling voltage is not 5V, the LED will display the failure.
Potential causes	● Wiring mistake ● Faulty over load protector ● System block ● Faulty outdoor PCB

Trouble shooting:



High pressure protection
Whether the wiring between the high pressure switch and main control board is connected well or correctly
No
Connect it well
Yes
Whether the high pressure protector is broken
Method: Disconnect the plug. Measure the resistance of the high pressure protector, if the protector is normal the value is o,
No
Replace high pressure protector
Yes
Check whether the outdoor ambient temperature is higher than 50℃
Yes
Stop the unit
No
Check if the outdoor unit ventilation is good
NO
Make the outdoor unit ventilate well
Yes
Check if the outdoor fan runs properly
No
please refer to the solution of fan speed has been out of control malfunction . Find out the cause and have it solved.
Yes
Check whether the heat exchanger is dirty
Yes
Clean the heat exchanger
No
Replace outdoor main board
No
Check whether the refrigerant system is ok

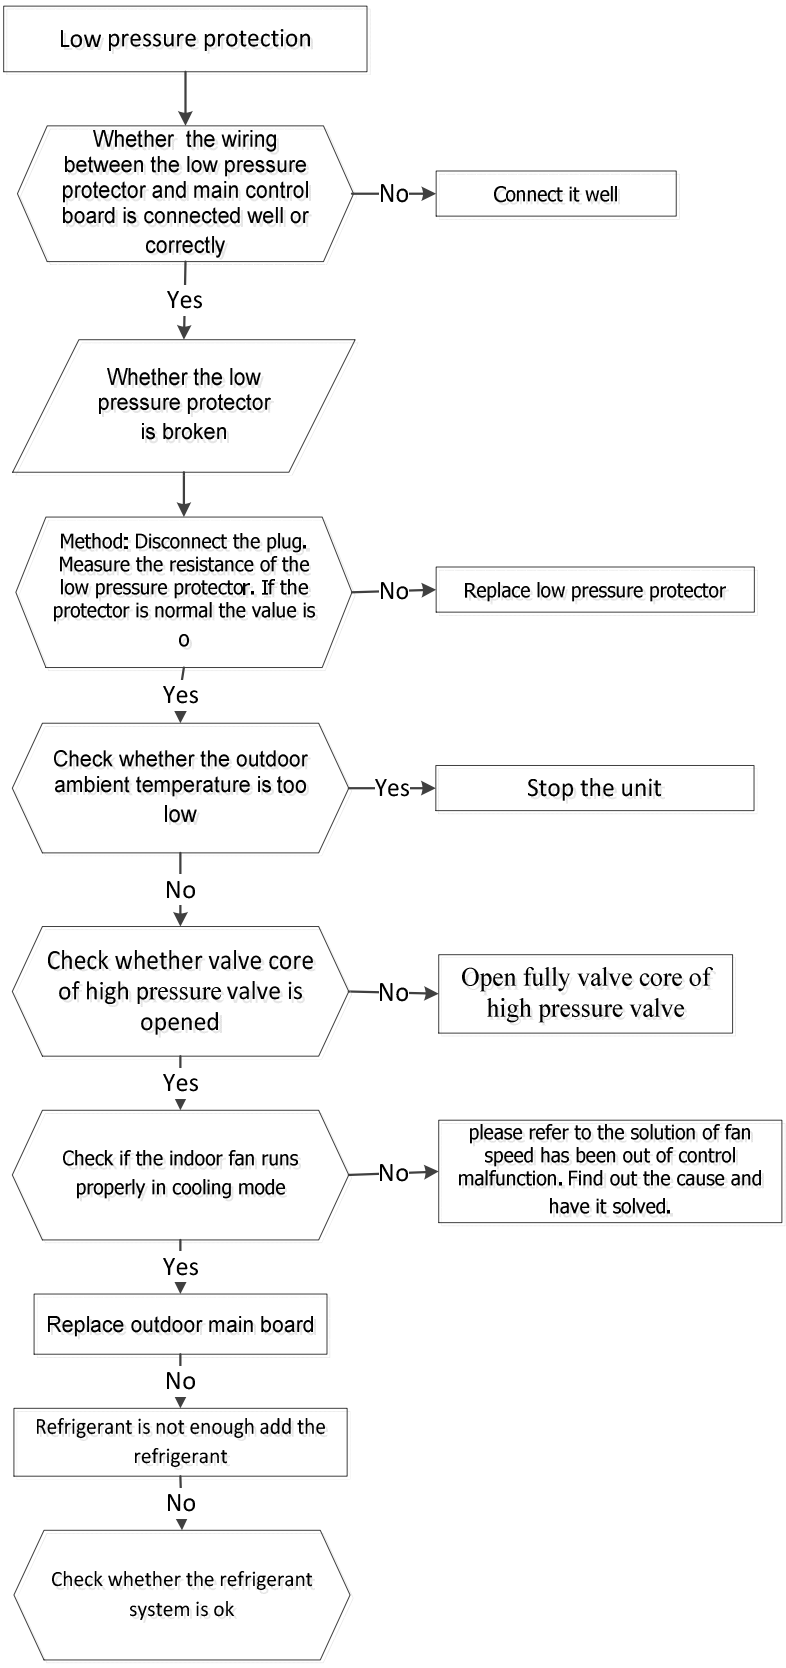
8.4.2.9 P2 (Low pressure protection) diagnosis and solution.

Error Code	P2
Malfunction conditions	If the sampling voltage is not 5V, the LED will display the failure.
Potential causes	● Wiring mistake ● Faulty over load protector ● System block ● Faulty outdoor PCB

Trouble shooting:



Low pressure protection
Whether the wiring between the low pressure protector and main control board is connected well or correctly
No
Connect it well
Yes
Whether the low pressure protector is broken
Method: Disconnect the plug. Measure the resistance of the low pressure protector. If the protector is normal the value is o
No
Replace low pressure protector
Yes
Check whether the outdoor ambient temperature is too low
Yes
Stop the unit
No
Check whether valve core of high pressure valve is opened
No
Open fully valve core of high pressure valve
Yes
Check if the indoor fan runs properly in cooling mode
No
please refer to the solution of fan speed has been out of control malfunction. Find out the cause and have it solved.
Yes
Replace outdoor main board
No
Refrigerant is not enough add the refrigerant
No
Check whether the refrigerant system is ok

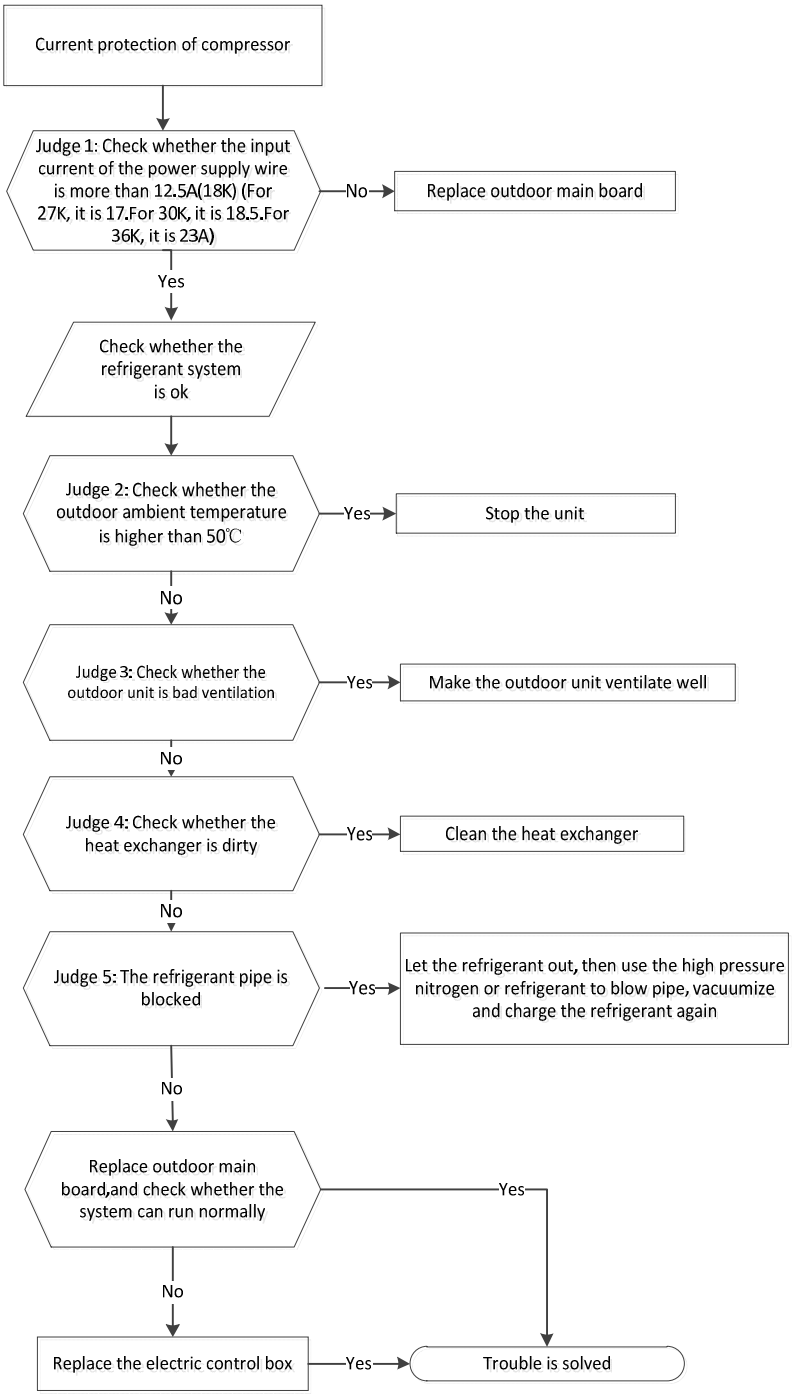
COM

8.4.2.10 P3 (Current overload protection) diagnosis and solution.

Error Code	P3
Malfunction conditions	If the outdoor current exceeds the current limit value, the LED will display the failure.
Potential causes	● Wiring mistake ● Faulty over load protector ● System block ● Faulty outdoor PCB

Trouble shooting:



Current protection of compressor
Judge 1: Check whether the input current of the power supply wire is more than 12.5A(18K) (For 27K, it is 17.For 30K, it is 18.5.For 36K, it is 23A)
No
Replace outdoor main board
Yes
Check whether the refrigerant system is ok
Judge 2: Check whether the outdoor ambient temperature is higher than 50℃
Yes
Stop the unit
No
Judge 3: Check whether the outdoor unit is bad ventilation
Yes
Make the outdoor unit ventilate well
No
Judge 4: Check whether the heat exchanger is dirty
Yes
Clean the heat exchanger
No
Judge 5: The refrigerant pipe is blocked
Yes
Let the refrigerant out, then use the high pressure nitrogen or refrigerant to blow pipe, vacuumize and charge the refrigerant again
No
Replace outdoor main board,and check whether the system can run normally
Yes
No
Replace the electric control box
Yes
Trouble is solved

TEMP

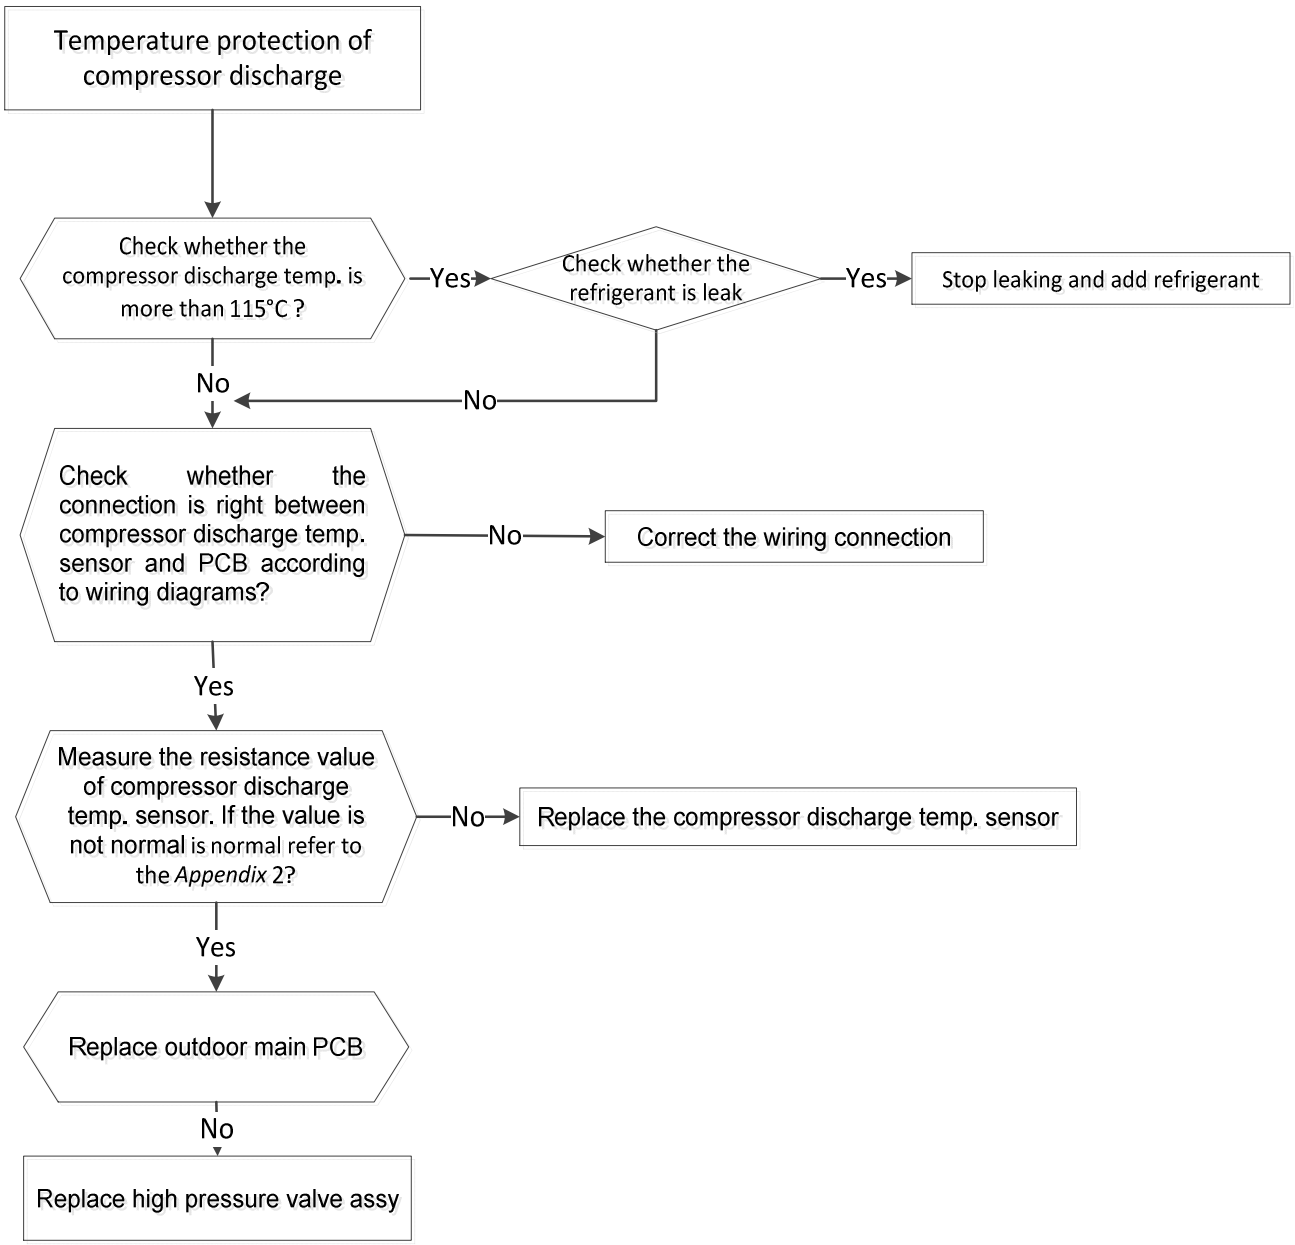
8.4.2.11 P4 (Temperature protection of compressor discharge) diagnosis and solution.

Error Code	P4
Malfunction conditions	When the compressor discharge temperature(T5) is more than 115℃ for 10 seconds, the compressor will stop and restart till T5 is less than 90℃.
Potential causes	● Refrigerant leakage ● Wiring mistake ● Faulty discharge temperature sensor ● Faulty outdoor PCB

Trouble shooting:

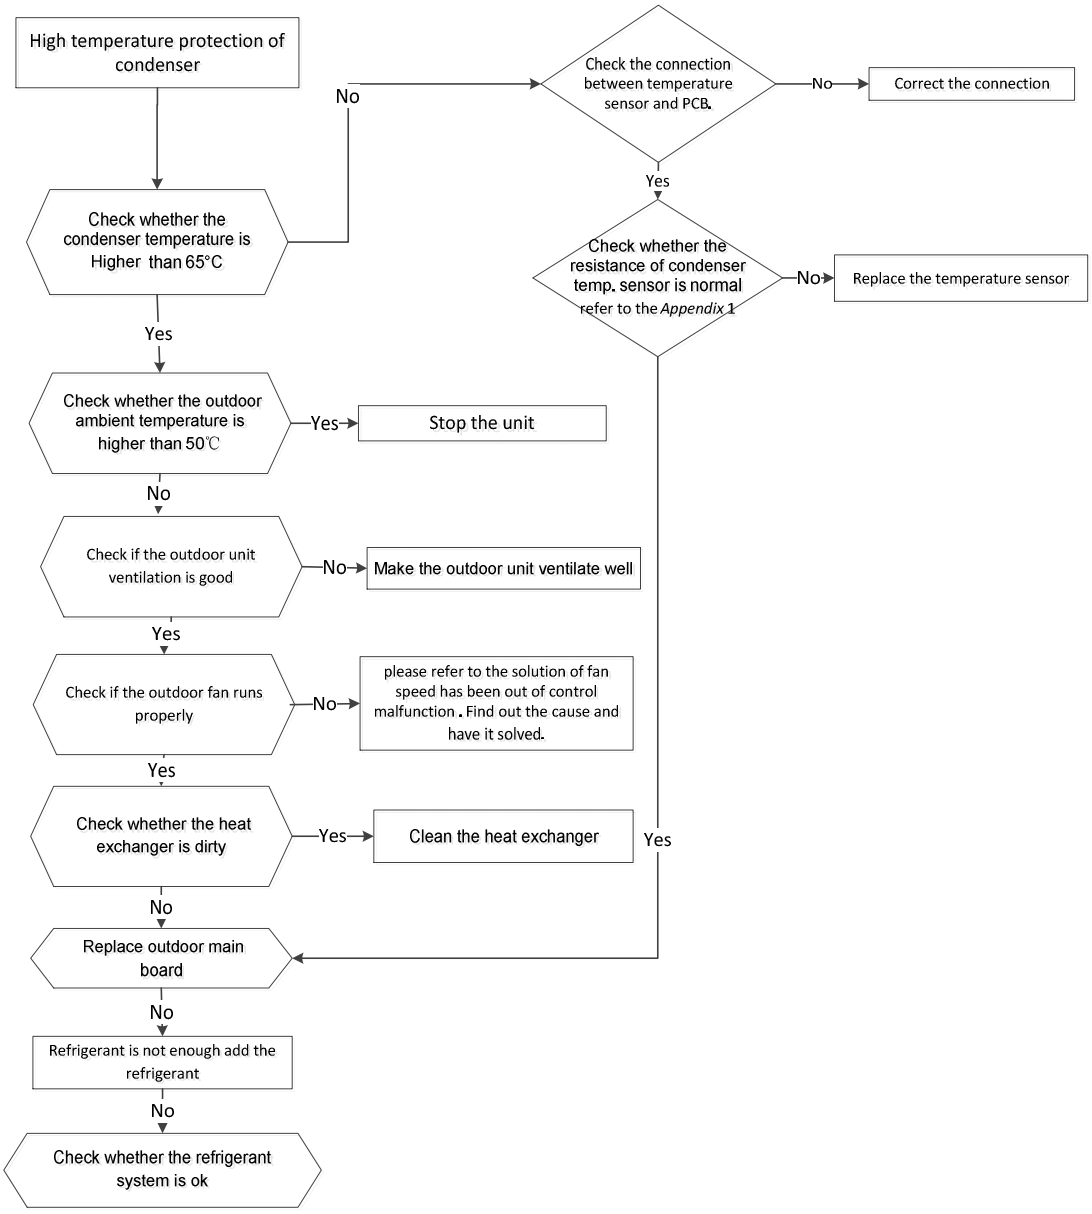


Temperature protection of compressor discharge
Check whether the compressor discharge temp. is more than 115°C ?
Yes
Check whether the refrigerant is leak
Yes
Stop leaking and add refrigerant
No
No
Check whether the connection is right between compressor discharge temp. sensor and PCB according to wiring diagrams?
No
Correct the wiring connection
Yes
Measure the resistance value of compressor discharge temp. sensor. If the value is not normal is normal refer to the Appendix 2?
No
Replace the compressor discharge temp. sensor
Yes
Replace outdoor main PCB
No
Replace high pressure valve assy

8.4.2.12 P5 (High temperature protection of condenser) diagnosis and solution.

Error Code	P5
Malfunction conditions	When outdoor pipe temperature is more than 65°C, the unit will stop, and unit runs again when outdoor pipe temperature is less than 52°C
Potential causes	● Faulty condenser temperature sensor ● Heat exchanger dirty ● System block

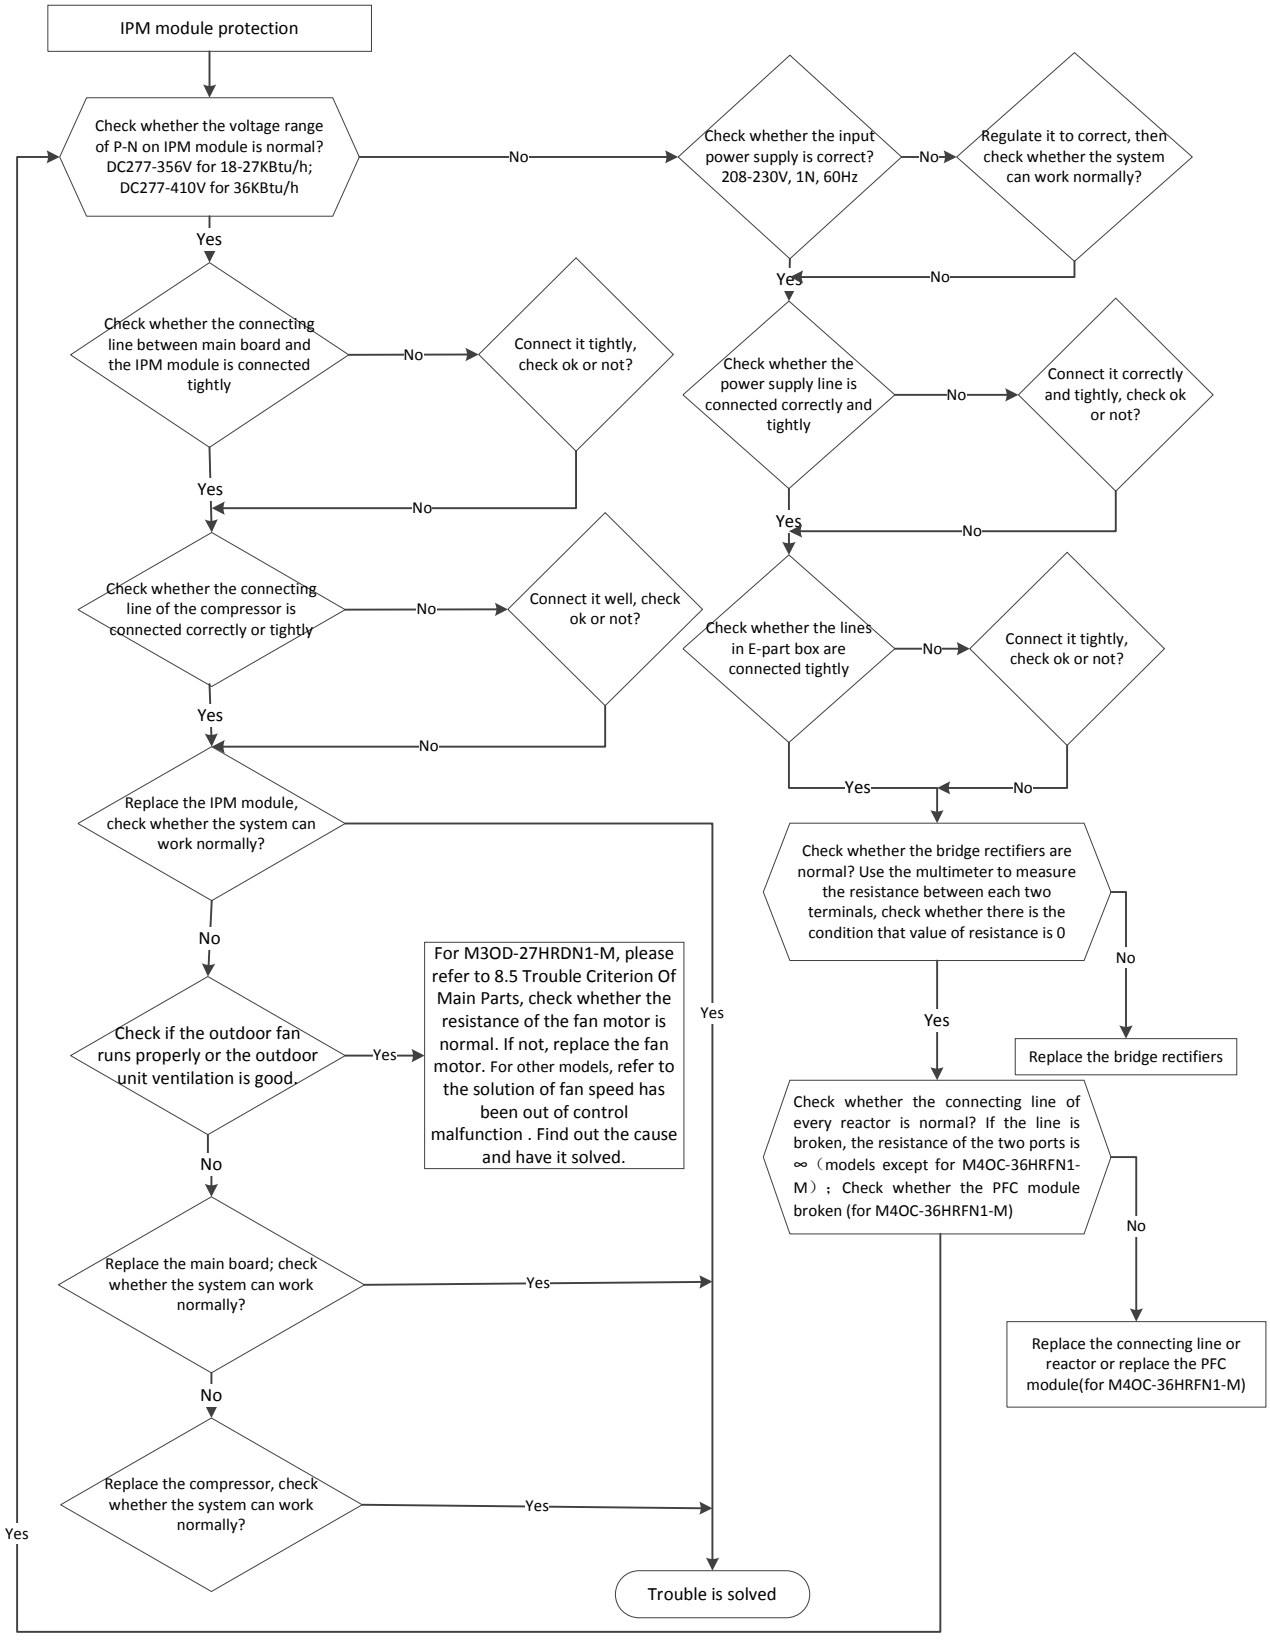
Trouble shooting:



8.4.2.13 P6 (Inverter module (IPM) malfunction) diagnosis and solution.

Error Code	P6
Malfunction conditions	When the voltage signal that IPM send to compressor drive chip is abnormal, the display LED will show “P6” and AC will turn off.
Potential causes	● Wiring mistake ● IPM malfunction ● Faulty outdoor fan assembly ● Compressor malfunction ● Faulty outdoor PCB

Trouble shooting:



IPM module protection
Check whether the voltage range of P-N on IPM module is normal? DC277-356V for 18-27KBtu/h; DC277-410V for 36KBtu/h
No
Check whether the input power supply is correct? 208-230V, 1N, 60Hz
No
Regulate it to correct, then check whether the system can work normally?
Yes
No
Yes
Check whether the connecting line between main board and the IPM module is connected tightly
No
Connect it tightly, check ok or not?
Check whether the power supply line is connected correctly and tightly
No
Connect it correctly and tightly, check ok or not?
Yes
No
Yes
No
Check whether the connecting line of the compressor is connected correctly or tightly
No
Connect it well, check ok or not?
Check whether the lines in E-part box are connected tightly
No
Connect it tightly, check ok or not?
Yes
No
Yes
No
Replace the IPM module, check whether the system can work normally?
Yes
Check whether the bridge rectifiers are normal? Use the multimeter to measure the resistance between each two terminals, check whether there is the condition that value of resistance is 0
No
Yes
Replace the bridge rectifiers
No
Check if the outdoor fan runs properly or the outdoor unit ventilation is good.
Yes
For M3OD-27HRDN1-M, please refer to 8.5 Trouble Criterion Of Main Parts, check whether the resistance of the fan motor is normal. If not, replace the fan motor. For other models, refer to the solution of fan speed has been out of control malfunction . Find out the cause and have it solved.
Check whether the connecting line of every reactor is normal? If the line is broken, the resistance of the two ports is ∞（models except for M4OC-36HRFN1-M）; Check whether the PFC module broken (for M4OC-36HRFN1-M)
No
Yes
Replace the main board; check whether the system can work normally?
Yes
No
Replace the connecting line or reactor or replace the PFC module(for M4OC-36HRFN1-M)
No
Replace the compressor, check whether the system can work normally?
Yes
Yes
Trouble is solved

8.4.2.14 The cooling operation or heating operation does not operate.

Potential causes	● Faulty 4-way valve

Check of 4-way, please refer to part 5 in 9.5 Trouble Criterion Of Main Parts.

8.4.2.15 When cooling, heat exchanger of non-operating indoor unit frosts.

When heating, non-operating indoor unit get warm.

Potential causes	● Faulty EXV ● Wire and tubing connected in reverse.

Check of EXV, please refer to part 6 in 9.5 Trouble Criterion Of Main Parts.

8.5 Trouble Criterion Of Main Parts.

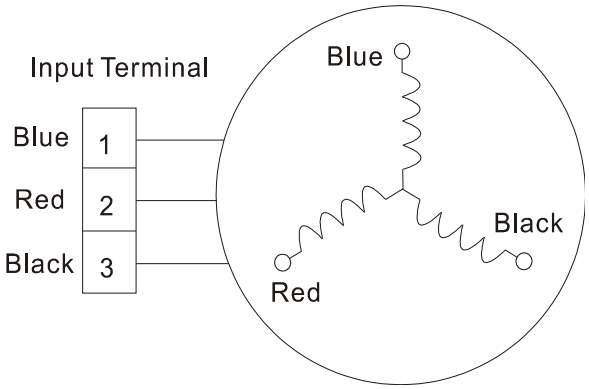
2. Compressor check

Measure the resistance value of each winding by using the tester.



Position		Resistance Value				
	ATM150D23UFZ	ATF235D22UMT	ATF250D22UMT	ATF310D43UMT	ATQ360D1UMU	ATQ420D1UMU
Blue - Red	1.72 Ω	0.75 Ω	0. 75 Ω	0.65 Ω	0. 37 Ω	0.38 Ω

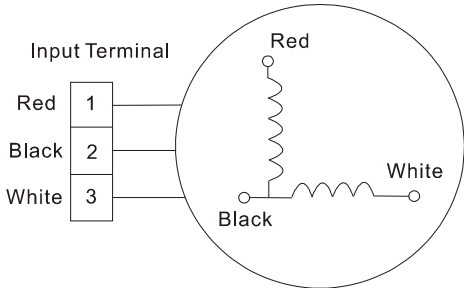
3. IPM continuity check

Turn off the power, let the large capacity electrolytic capacitors discharge completely, and dismount the IPM. Use a digital tester to measure the resistance between P and UVWN; UVW and N.

Digital tester		Normal resistance value	Digital tester		Normal resistance value
(+)Red	(-)Black		(+)Red	(-)Black	
P	N	∞ (Several MΩ)	U	N	∞ (Several MΩ)
	U		V		
	V		W		
	W		(+)Red		

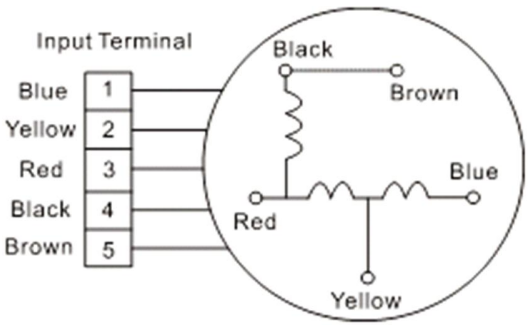
4. AC Fan Motor.

Measure the resistance value of each winding by using the tester.



Position	Resistance Value			
	RPG20B		RPG28H	
Black - Red	381Ω±8% (20℃) (Brand: Weiling)	342Ω±8% (20℃) (Brand: Dayang)	183.6Ω±8% (20℃) (Brand: Weiling)	180Ω±8% (20℃) (Brand: Wolong)
White - Black	267Ω±8% (20℃) (Brand: Weiling)	253Ω±8% (20℃) (Brand: Dayang)	206Ω±8% (20℃) (Brand: Weiling)	190Ω±8% (20℃) (Brand: Wolong)

Measure the resistance value of each winding by using the tester.

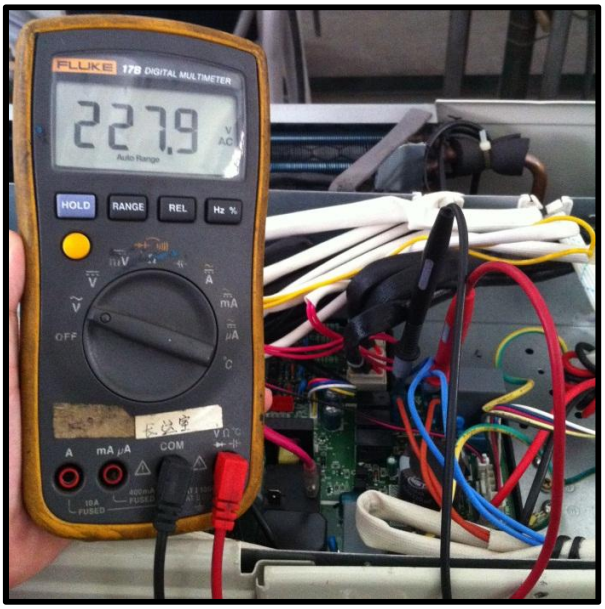


Position	Resistance Value						
	YDK70-6FB	YDK180-8GB	YSK27-4G	YSK68-4B	YDK45-6B	YSK25-6L	YDK53-6FB(B)
Black - Red	56Ω±8% (20℃)	24.5Ω±8% (20℃)	317Ω±8% (20℃)	145Ω±8% (20℃)	345Ω±8% (20℃)	627Ω±8% (20℃)	88.5Ω±8% (20℃)
Red - Yellow	76Ω±8% (20℃)	19Ω±8% (20℃)	252Ω±8% (20℃)	88Ω±8% (20℃)	150Ω±8% (20℃)	374.3Ω±8% (20℃)	138Ω±8% (20℃)
Yellow - Blue	76Ω±8% (20℃)	19Ω±8% (20℃)	252Ω±8% (20℃)	88Ω±8% (20℃)	150Ω±8% (20℃)	374.3Ω±8% (20℃)	138Ω±8% (20℃)

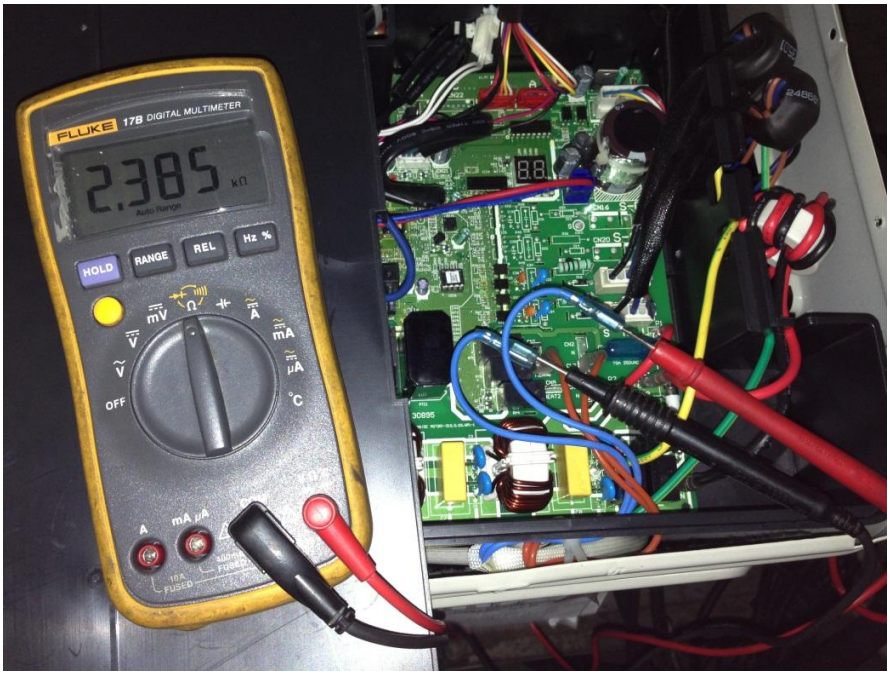
5.4-way valve

1. Power on, use a digital tester to measure the voltage, when the unit operates in cooling, it is 0V. When the unit operates in heating, it is about 230VAC.

   If the value of the voltage is not in the range, the PCB must have problems and need to be replaced.

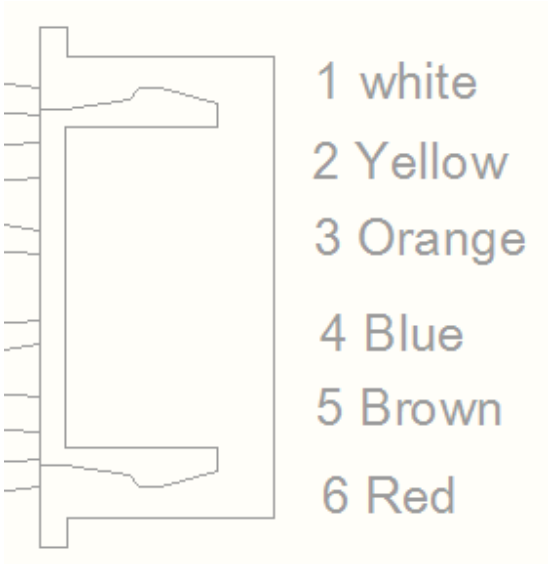


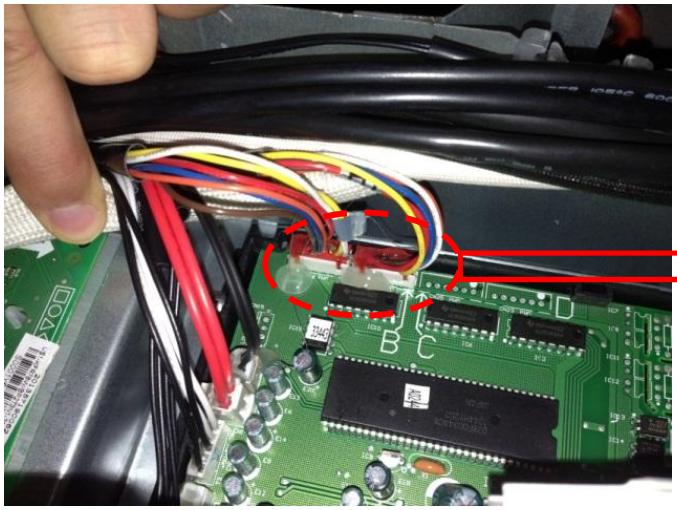
2 Turn off the power, use a digital tester to measure the resistance. The value should be 1.8~2.5 KΩ.

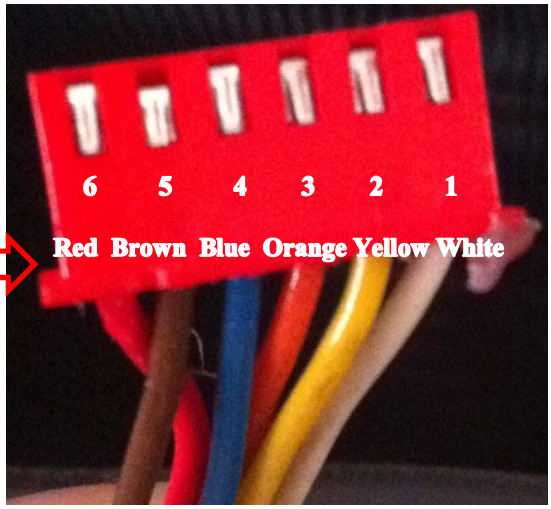


6.EXV check

Disconnect the connectors.

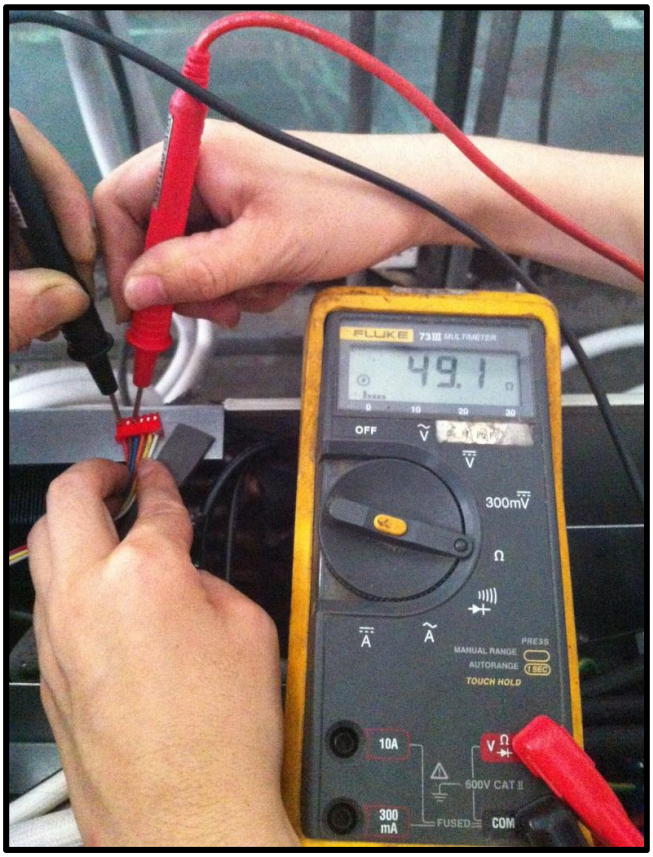






Resistance to EXV coil

Color of lead wire	Normal Value
Red- Blue	About 50Ω
Red - Yellow	
Brown-Orange	
Brown-White	



Red- Blue

Red - Yellow

Brown-White

9. Disassembly Instructions

Note: This part is for reference, the photos may have slight difference with your machine.

- **MCH2U-18PHH2 (WCA30 metal plate)**

No.	Part name	Procedures	Remarks
1	Fan assembly	How to remove the fan assembly. 1) Turn off the air conditioner and turn off the power breaker. 2) Remove the screws of air outlet grille(4 screws) 3) Remove the hex nut fixing the fan. 4) Remove the fan. 5) Remove the screws of top cover, and remove the top	   ④ Screws of top 

		cover. (3 screws) 6) Remove the cover of electrical control box. 7) Disconnect the fan motor connector CN14(3p,white) from the IPM board. 8) Remove the fan motor after unfastening four fixing screws.	  2	Panel plate	How to remove the panel plate. 1) Remove the screws of front panel, and remove the front panel. (6 screws)	Screws of front panel  Screws of front panel

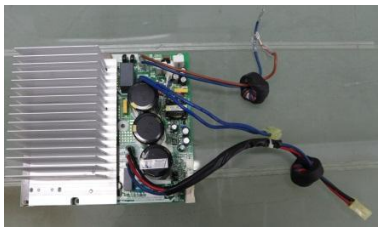
		2) Remove the screws of big handle, and remove the big handle.(4 screws) 3) Remove two screws of terminal board and seven screws of right-rear panel, and remove the right-rear panel.	  
			3	Electrical parts	How to remove the electrical parts. 1) Perform work of item 1,2. 2) Remove the four screws fixing the IPM board. 3) Unfasten the connector of the reactor. 4) Unfasten the connector of the compressor. 5) Disconnect following 3 pieces of connection wires and connectors between IPM and main control PCB. CN1(5p,white) CN14(3p,white) CN4(red or brown) CN5(blue)	  
6) Remove the IPM board.



7) Disconnect the connectors and wires connected from PCB and other parts.

Connectors:

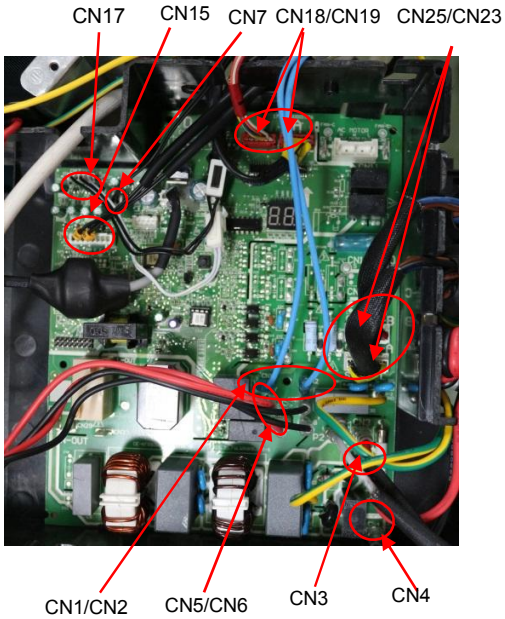
CN17:T3/T4 temperature sensor (2p/2p,white)

CN7: Discharge temperature sensor (2p,white)

CN15:T2B-A,B temperature sensor (2p/2p,white)

CN18/CN19: Electronic expansive valve A,B (6p/6p,red/red)

CN25/CN23: S-A,S-B (3p/3p,white/white)



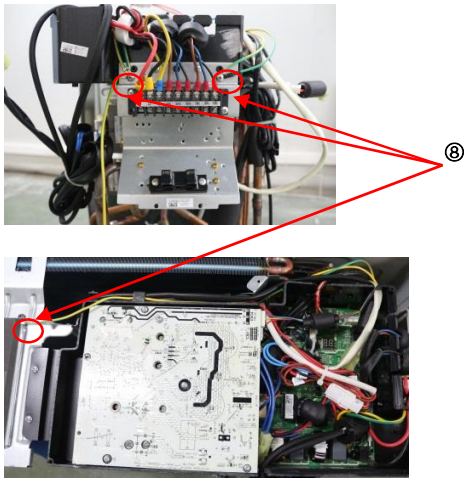
Wires:

CN1/CN2: 4-way valve (blue-blue)

CN5/CN6: Crankcase heating cable (red-red)

CN3:L-IN (red)

CN4:N-IN (black)



8) Disconnect the grounding wire (yellow-green) after removing the big handle and the right-rear panel.

9) Remove the PCB board.

			4	Compressor	How to remove the compressor. 1) Perform work of item 1,2. 2) Remove the cover of electrical control box. 3) Extract refrigerant gas. 4) Remove the sound insulation material and crankcase heating cable. 5) Remove terminal cover of compressor, and disconnect wires of crankcase electric heater and compressor from the terminal. 6) Remove the discharge pipe and suction pipe with a burner. 7) Remove the hex nuts and washers fixing the compressor to bottom plate. 8) Lift the compressor.	

			5	Reactor	How to remove the reactor 1) Perform work of item 2 2) Unfasten the connector between IPM and reactor. 3) Remove three screws of reactor, and remove the reactor.	 
6	The 4-way valve	How to remove the 4-way valve 1) Perform work of item 2. 2) Extract refrigerant gas. 3) Remove the electrical parts from item 3. 4) Remove fixing screw of the coil, and remove the coil. 5) Detach the welded parts of 4-way valve and pipe.	7	The expansion valve	How to remove the expansion valve 1) Perform work of item 1,2. 2) Remove the electrical parts from item 3.. 3) Remove the coils. 4) Detach the welded parts of expansion valves and pipes.	
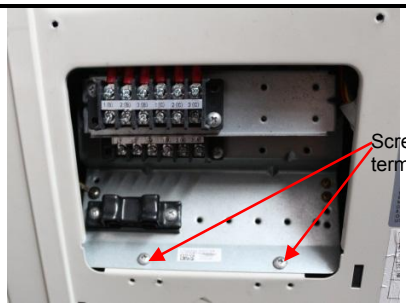
- **MCH3U-27PHH2 (WD30 metal plate)**

No.	Part name	Procedures	Remarks
1	Panel plate	How to remove the panel plate. 1) Turn off the air conditioner. Turn off the power breaker.	
		2) Remove the screws of big handle, and remove the big handle.(4 screws) 3) Remove the screws of top cover, and remove the top cover. (4 screws) 4) Remove the screws of right front side panel, and remove the right front side panel (1 screws) 5) Remove the screws of front panel, and remove the front panel. (8 screws) 6) Remove two screws of terminal board, screws of water collector and fifteen screws of right-rear panel, and remove the right-rear panel.	  Screws of top cover   Screws of front panel Screws of right front side panel  Screws of front panel

			Screws of front panel  Screws of front panel  Screws of right-rear panel 
			 


2	Fan assembly	How to remove the fan assembly. 1) Remove the top cover, right front side panel and front panel from item 1.step 1~4 2) Remove the hex nut fixing the fan. 3) Remove the fan. 4) Remove the cover of electrical control box cover. 5) Disconnect the fan motor	 ④ 

		connector CN14(5p,white) from the IPM board. 6) Remove the fan motor after unfastening four fixing screws.	 ⑤ 3	Electrical parts	How to remove the electrical parts. 1) Perform work of item 1,2. 2) Remove the four screws fixing the IPM board. 3) Unfasten the connector of the reactor. 4) Unfasten the connector of the compressor. 5) Disconnect following 3 pieces of connection wires and connectors between IPM and PCB.	 ③ IPM board PCB board  ④

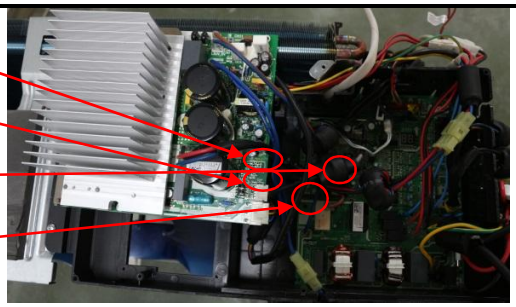
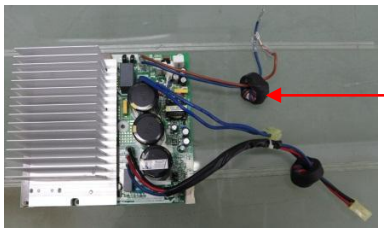
CN1(5p,white)

CN14(3p,white)

CN3(red or brown)

CN5(blue)





⑥

6) Remove the IPM board.

7) Disconnect the connectors and wires connected from PCB and other parts.

Connectors:

CN17:T3/T4 temperature sensor (2p/2p,white)

CN7: Discharge temperature sensor (2p,white)

CN12:Ttop temperature sensor(2p,white)

CN15:T2B-A,B,C temperature sensor (2p/2p/2p,white)

CN18/CN19/CN22: Electronic expansive valve A,B,C (6p/6p/6p,red/red/red)

CN25/CN23/CN20: S-A,S-B,S-C (3p/3p/3p,white/white/white)

		Wires: CN1/CN2: 4-way valve (blue-blue) CN5/CN6: Crankcase heating cable (red-red) CN3:L1-IN (red) CN4:L2-IN (black) 8) Disconnect the grounding wire (yellow-green) after removing the big handle and the right-rear panel. 9) Remove the PCB board.	4	Compressor	How to remove the compressor. 1) Perform work of item 1,2,3. 2) Remove the electrical control box and partition plate. 3) Extract refrigerant gas. 4) Remove the sound insulation material and crankcase heating cable. 5) Remove terminal cover of compressor, and disconnect wires of compressor thermo and compressor from the terminal. 6) Remove the discharge pipe and suction pipe with a burner.	

		7) Remove the hex nuts and washers fixing the compressor to bottom plate. 8) Lift the compressor.	5	Reactor	How to remove the reactor 1) Perform work of item 1,2 2) Unfasten the connector between IPM and reactor. 3) Remove two screws of cover of inductance, and remove the cover of inductance 4) Disconnect two pieces of wires connected from the cover of inductance. 5) Remove four screws of reactor, and remove the reactor.	 
6	The 4-way valve	How to remove the 4-way valve 1) Perform work of item 1,2. 2) Extract refrigerant gas. 3) Remove the electrical parts from item 3. 4) Remove fixing screw of the coil, and remove the coil. 5) Detach the welded parts of 4-way valve and pipe.	7	The expansion valve	How to remove the expansion valve 1) Perform work of item 1,2. 2) Remove the electrical parts from item 3. 3) Remove the coils. 4) Detach the welded parts of expansion valves and pipes.	
- **MCH4U-36PHH2 (WD30 metal plate)**

No.	Part name	Procedures	Remarks
1	Panel plate	How to remove the panel plate. 1) Turn off the air conditioner.	
		Turn off the power breaker. 2) Remove the screws of big handle, and remove the big handle.(4 screws) 3) Remove the screws of top cover, and remove the top cover. (4 screws) 4) Remove the screws of right front side panel, and remove the right front side panel (1 screw) 5) Remove the screws of front panel, and remove the front panel. (8 screws) 6) Remove two screws of terminal board, screws of water collector and fifteen screws of right-rear panel, and remove the right-rear panel.	   

			Screws of front panel  Screws of front panel  Screws of right-rear panel 
			2	Fan assembly	How to remove the fan assembly. 1) Remove the top cover, right front side panel and front panel from item 1.step 1~4 2) Remove the hex nut fixing the fan. 3) Remove the fan. 4) Unfix the hooks and remove the screws, then open the electronic control box. 5) Disconnect the fan motor connector CN19(3p,white) from the driver board.	  
		6) Remove the fan motor after unfastening four fixing screws.	3	Electrical parts	How to remove the electrical parts. 1) Perform work of item 1,2. 2) Unfasten the connector of the reactor. 3) Unfasten the connector of the compressor. 4) Unfasten the connector of the PFC inductor. 5) Disconnect following 3 pieces of connection wires and connectors between driver board and PCB. CN55-CN7(7p,white) CN54-CN6(red) CN53-CN5(black) 6) Remove the fixing screws, then move the driver board. 7) Disconnect the connectors and wires	  
		connected from PCB and other parts. Connectors: CN8:T3/T4 temperature sensor (2p/2p,white) CN33: Discharge temperature sensor (2p,white) CN13:T2B-A,B,C,D temperature sensor (2p/2p/2p/2p,white) CN18/CN17/CN21/CN20: Electronic expansive valve A,B,C,D (6p/6p/6p,red/red/red) CN30/CN29/CN28/CN27: S-A,S-B,S-C,S-D (3p/3p/3p/3p,white) CN9: High and low pressure switch (2p/2p, white) Wires: CN3/CN22: 4-way valve (blue-blue) CN4/CN40: Crankcase heating cable (black-red) CN10/CN44: Crankcase heating cable (black-red) CN1:L1-IN (red) CN2:L2-IN (black) 8) Disconnect the grounding wire (yellow-green) after removing the right-rear panel. 9) Remove the PCB board.	
4	Compressor	How to remove the compressor. 1) Perform work of item 1,2,3. 2) Remove the electrical control box and partition plate. 3) Extract refrigerant gas. 4) Remove the sound insulation material and crankcase heating cable. 5) Remove terminal cover of compressor, and disconnect wires of compressor thermo and compressor from the terminal. 6) Remove the discharge pipe and suction pipe with a burner. 7) Remove the hex nuts and washers fixing the compressor to bottom plate. 8) Lift the compressor.	

5	The 4-way valve	How to remove the 4-way valve 1) Perform work of item 1,2. 2) Extract refrigerant gas. 3) Remove the electrical parts from item 3. 4) Remove fixing screw of the coil, and remove the coil. 5) Detach the welded parts of 4-way valve and pipe.	
6	The expansion valve	How to remove the expansion valve 1) Perform work of item 1,2. 2) Remove the electrical parts from item 3. 3) Remove the coils. 4) Detach the welded parts of expansion valves and pipes.	

- **MCH5U-48PHH2 (WE30 metal plate)**

No.	Part name	Procedures	Remarks
1	Fan assembly	How to remove the fan assembly. 1) Turn off the air conditioner. Turn off the power	

		breaker. 2) Remove the screws of air outlet grille(8 screws) 3) Remove the hex nut fixing the fan. 4) Remove the fan. 5) Remove the screws of top cover, and remove the top cover. (4 screws) 6) Remove the screws of front side panel, and remove the front side panel (1 screw)	

		7) Disconnect the fan motor connectors FAN1(3p,white) and FAN2(3p,white) from DC motor driver board. 8) Remove the fan motor after unfastening fixing screws.	
2	Panel plate	How to remove the panel plate. 4) Remove big handle.(2 screws) and water collector(2 screws) 5) Remove 2 screws of terminal board and 15 screws of right-rear panel, and remove the right-rear panel.	
3	Electrical parts	How to remove the electrical parts. 1) Perform work of item 1 step 5~6 and item 2.	

		2) Disconnect the fan motor Connector(5p,white) from the IPM board. 3) Disconnect following 8 pieces of connection wires and connectors between IPM and other parts. CN2(yellow) CN1(red) CN6(black) CN3(yellow) U、V、W(black) CN9(10p,white) 4) Remove the fixing screws then remove the IPM board. 5) Disconnect the connectors and wires connected from PCB and other parts. Connectors:	

		CN8: Discharge temperature sensor (2p,white) CN12：Heatsink temperature sensor(2p,red) CN9:T3/T4 temperature sensor (2p/2p,white) CN11:T2B-A,B,C,D,E temperature sensor (2p/2p/2p/2p/2p,white) CN15/CN23/CN26/CN30/CN33: Electronic expansive valve (6p/6p/6p/6p/6p,red) CN37/CN29/CN21/CN16/CN13: S-A,S-B,S-C,S-D,S-E (3p/3p/3p/3p/3p,white) CN10: High and low pressure switch (2p/2p, white) Wires: CN17/CN18: 4-way valve (blue-blue) CN19/CN20: connected to crankcase heating cable. (black-red) CN24/CN25: Electric heater of chassis (orange-orange) CN1:L-IN (red) CN3:N-IN (black) 6) Disconnect the grounding wire (yellow-green) after removing the big handle. 7) Remove the PCB board.	

4	Compressor	How to remove the compressor. 1) Perform work of item 1 step 5~6 and item 2.. 2) Extract refrigerant gas. 3) Remove the sound insulation material and crankcase heating cable. 4) Remove terminal cover of compressor, and disconnect wires of crankcase electric heater and compressor from the terminal. 5) Remove the discharge pipe and suction pipe with a burner. 6) Remove the hex nuts and washers fixing the compressor to bottom plate. 7) Lift the compressor.	

5	The 4-way valve	How to remove the 4-way valve 6) Perform work of item 1 step 5~6 and item 2.. 7) Extract refrigerant gas. 8) Remove the electrical parts from item 3. 9) Remove fixing screw of the coil, and remove the coil. 10) Detach the welded parts of 4-way valve and pipe.	
6	The expansion valve	How to remove the expansion valve 5) Perform work of item 1,2. 6) Remove the electrical parts from item 3.. 7) Remove the coil. 8) Detach the welded parts of expansion valves and pipes.
