ODU Motherboard Compatibility Setup Guide

WARNING

Disconnect all power to unit before installing or servicing. More than one disconnecting switch may be required to de-energize the equipment. Hazardous voltage can cause server personal injury or death.

ALL phases of this installation must comply with NATIONAL, STATE AND LOCAL CODES

	Parts Name / Model	Ecoer code	Product Series			
			Ecoer Decades	Ecoer Decades Extreme	Ecoer TDi Pro	Ecoer TDi Pro 2

	Motherboard component(4860)/ EODA19H-4860ABA	EAC230904171	✓ ¹	✓ ²	✓ ³	✓ ⁴

NOTES:

"✓¹": Set n18=1 for compatibility with the Ecoer Decades series (EODA18H-2436, EODA18H-4860).

"✓²": Set n18=2 for compatibility with the Ecoer Decades Extreme series (EODA18H-2436BAA, EODA18H-4860BAA).

"✓³": Set n18=3 for compatibility with the Ecoer TDi Pro series (EODA19H-2436AAA, EODA19H-4860AAA)

"✓⁴": Set n18=4 for compatibility with the Ecoer TDi Pro 2 series (EODA19H-2436ABA, EODA19H-4860ABA)

When using a compatible motherboard to replace the previous motherboard, please follow the steps below for setup:

Step 1: Power off the outdoor unit and disconnect the power source. Wait for at least 30 seconds to ensure the discharge of any residual electricity on the motherboard before proceeding with the following operations.

Step 2: Remove the cables and screws from the original motherboard and remove the original motherboard. (Make sure to keep the 6 installation screws that were removed for future use)

Step 3: Reconnect the cables and fix the motherboard. Make sure the wiring is correct. Note that the screws in the red and blue frames are different, do not mix the screws.

Step 4: Please proceed with the appropriate settings based on the installed series or model:

Product Series	Model	HPS	Dip Switch	Image
Ecoer Decades	EODA18H-2436, EODA18H-4860	×	ON	Figure 1
Ecoer Decades Extreme	EODA18H-2436BAA, EODA18H-4860BAA	×	ON	Figure 1
Ecoer TDi Pro	EODA19H-2436AAA, EODA19H-4860AAA	√	1	Figure 2
Ecoer TDi Pro 2	EODA19H-2436ABA, EODA19H-4860ABA	√	1	Figure 2

Figure 1

The yellow-colored HPS port is connected to the corresponding cable.

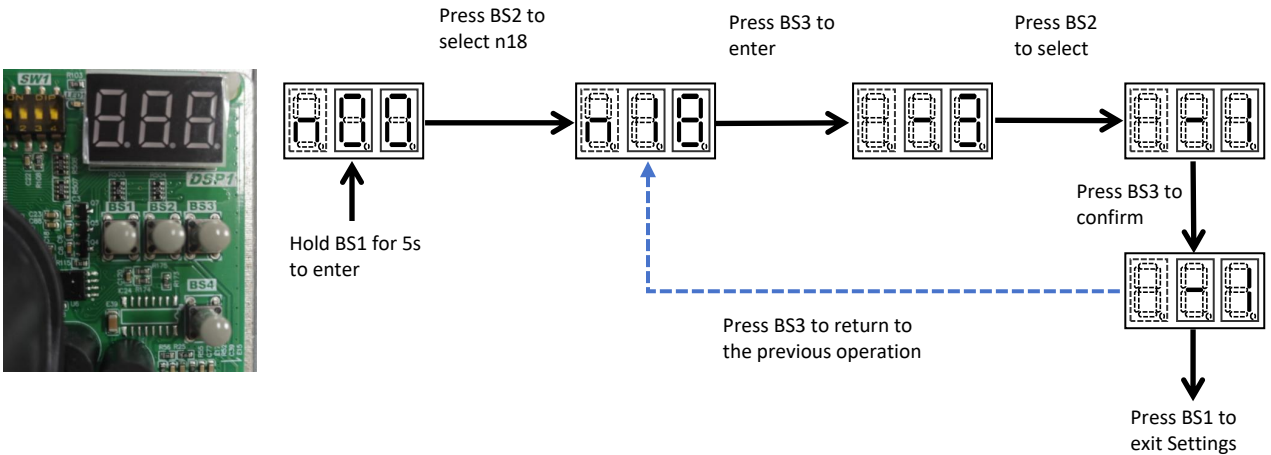

Figure 2

Step 5: Power on the outdoor unit and keep it in standby mode (do not send any startup commands). Ensure proper wiring of the motherboard before system power-up.

Step 6: Please follow the steps shown in the diagram and perform the appropriate settings based on the installed series or model:

Product Series	Model	Set N18
Ecoer Decades	EODA18H-2436, EODA18H-4860	1
Ecoer Decades Extreme	EODA18H-2436BAA, EODA18H-4860BAA	2
Ecoer TDi Pro	EODA19H-2436AAA, EODA19H-4860AAA	3
Ecoer TDi Pro 2	EODA19H-2436ABA, EODA19H-4860ABA	4

Step 7: After completing the above setup, please perform a normal operational check on the device to ensure it is running properly.

Special Note: The TDi Pro 2 motherboard has added a **P terminal** for connecting the signal wire that enhances protection in the event of R-454B refrigerant leakage. Therefore, when replacing the previous (R-410A refrigerant) motherboard with the compatible EAC230904173/EAC230904171 motherboard, the P terminal does not require any connection.
